

# CONTENTS

<i>Preface</i>	vii
<b>I. Vibrations and Stability of Thin Structures</b>	<b>1</b>
<b>1 ELIZA HASEGANU'S ANALYSIS OF WRINKLING IN PRESSURIZED MEMBRANES</b>	<b>3</b>
<i>David J. Steigmann</i>	
1.1 Introduction . . . . .	3
1.2 Relaxed Membrane Theory . . . . .	5
1.3 Numerical Scheme . . . . .	7
1.4 Examples . . . . .	12
References . . . . .	16
<b>2 BUCKLING, VIBRATIONS AND OPTIMAL DESIGN OF RING-STIFFENED THIN CYLINDRICAL SHELLS</b>	<b>17</b>
<i>Sergei B. Filippov</i>	
2.1 Introduction . . . . .	17
2.2 Equations of Cylindrical Shells . . . . .	19
2.3 Approximate Equations . . . . .	20
2.4 Ring-stiffened Shell . . . . .	22
2.5 First Approximation . . . . .	23
2.6 Shell Stiffened with a Ring . . . . .	25
2.7 Optimal Rings Arrangement . . . . .	28
2.8 Homogenization . . . . .	31
2.9 Irregular Arrangement . . . . .	35
2.10 Effective Stiffness . . . . .	37

2.11	Optimal Design of Vibrating Stiffened Shells . . . . .	39
2.12	Optimal Design of Buckling Shells . . . . .	43
2.13	Conclusion . . . . .	46
	References . . . . .	46
<b>3</b>	<b>ASYMPTOTIC ANALYSIS OF THIN SHELL BUKLING</b>	<b>49</b>
	<i>Andrei L. Smirnov</i>	
3.1	Introduction . . . . .	49
3.2	Bifurcation Equations . . . . .	50
3.3	Orthotropic Ellipsoid Under External Pressure . . . . .	53
3.4	Orthotropic Elliptical Shell Under Internal Pressure . . . . .	58
3.5	Buckling of Cylindrical Shells . . . . .	59
3.6	Buckling of Orthotropic Cylindrical Shell Under Hydrostatic Pressure . . . . .	61
3.7	Buckling of Axially Compressed Orthotropic Cylindrical Shell . . . . .	63
3.8	Buckling of an Orthotropic Cylindrical Shell Under Torsion . . . . .	65
3.9	Effect of Anisotropy on the Critical Loading . . . . .	65
	References . . . . .	67
<b>4</b>	<b>THIN-WALL STRUCTURES MADE OF MATE- RIALS WITH VARIABLE ELASTIC MODULI</b>	<b>69</b>
	<i>Andrei L. Smirnov</i> <i>Petr E. Tovstik</i>	
4.1	Introduction . . . . .	69
4.2	Relations Between the Curvature of the Beam Neutral Line and the Bending Moment . . . . .	71
4.3	Stiffness of a Beam Made of Variable Modulus Material . . . . .	74
4.4	Fiber-reinforced Shell . . . . .	76
4.5	Strains and Stresses in a Shell Made of Composite Material . . . . .	76
4.6	The Threshold Constant $\varepsilon_0$ . . . . .	78
4.7	Elasticity Relations for a Shell Made of a Composite Material . . . . .	78
4.8	Cylindrical Shell Under Internal Pressure . . . . .	80
	References . . . . .	83

<b>5</b>	<b>ASYMPTOTIC INTEGRATION OF FREE VIBRATION EQUATIONS OF CYLINDRICAL SHELLS BY SYMBOLIC COMPUTATION</b>	<b>85</b>
	<i>Eliza M. Haseganu</i>	
	<i>Irina M. Landman</i>	
	<i>Andrei L. Smirnov</i>	
5.1	Introduction . . . . .	85
5.2	Problem Formulation . . . . .	86
5.3	Formal Asymptotic Solutions of the Equations of Cylindrical Shells . . . . .	89
5.4	Axisymmetric Vibrations . . . . .	90
5.5	Boundary Value Problem . . . . .	95
5.6	Nonaxisymmetric Vibrations . . . . .	98
5.7	Symbolic Computation . . . . .	102
	References . . . . .	104
<b>II.</b>	<b>Vibrations and Stability in Continuum Mechanics</b>	<b>105</b>
<b>6</b>	<b>THE MECHANICS OF PRE-STRESSED AND PRE-POLARIZED PIEZOELECTRIC CRYSTALS</b>	<b>107</b>
	<i>Eveline Baesu</i>	
6.1	Introduction . . . . .	107
6.2	Background . . . . .	109
6.3	General Theory of Piezoelectricity with Initial Fields . . . . .	112
6.3.1	Small deformation and electric fields superposed on large static fields . . . . .	112
6.3.2	Special case of homogeneous initial state and non-polarizable environment . . . . .	117
6.4	Special Case of Antiplane Deformation . . . . .	120
6.5	Stability Considerations . . . . .	123
6.5.1	Static and dynamic local stability . . . . .	123
6.5.2	Local stability against antitplane perturbations . . . . .	131
6.6	Transverse Electro-Acoustic Waves . . . . .	132
	References . . . . .	136

<b>7</b>	<b>ON THE STABILITY OF TRANSIENT VISCOUS FLOW IN AN ANNULUS</b>	<b>139</b>
	<i>Andrei A. Kolyshkin</i>	
	<i>Rémi Vaillancourt</i>	
	<i>Inta Volodko</i>	
	7.1 Introduction . . . . .	139
	7.2 Mathematical Formulation of the Problem . . . . .	141
	7.3 Numerical Results . . . . .	146
	7.4 Conclusion . . . . .	148
	References . . . . .	149
<b>III.</b>	<b>Biomechanics</b>	<b>151</b>
<b>8</b>	<b>MECHANICAL MODELS OF THE DEVELOPMENT OF GLAUCOMA</b>	<b>153</b>
	<i>Svetlana M. Bauer</i>	
	8.1 Introduction . . . . .	153
	8.2 Deformations of LC. Linear Theory . . . . .	156
	8.2.1 Axisymmetric deformation of the LC . . . . .	159
	8.2.2 Nonaxisymmetric deformation of the LC . . . . .	162
	8.2.3 Deformation of the oval LC . . . . .	168
	8.3 Shear of the Layers . . . . .	170
	8.4 Buckling of the LC . . . . .	174
	8.5 Conclusion . . . . .	177
	References . . . . .	178
<b>9</b>	<b>A MICROMECHANICAL MODEL FOR PREDICTING MICROCRACKING INDUCED MATERIAL DEGRADATION IN HUMAN CORTICAL BONE TISSUE</b>	<b>179</b>
	<i>Ozan Akkus</i>	
	<i>Clare Marie Rimnac</i>	
	<i>Ardéshir Guran</i>	
	9.1 Introduction . . . . .	180
	9.2 Experimental Materials and Methods . . . . .	181
	9.3 Prediction of Material Property Degradation by a Micromechanical Damage Model . . . . .	187
	9.4 Experimental Results . . . . .	190

9.5	Results of the Micromechanical Damage Model . . . . .	192
9.6	Comparison of Experimental Results to the Micromechanical Damage Model . . . . .	194
9.7	Discussion . . . . .	196
	References . . . . .	199
<b>IV.</b>	<b>Experimental and Computational Mechanics of Solids</b>	<b>201</b>
<b>10</b>	<b>AN EVOLUTION OF SOLID ELEMENTS FOR THERMAL-MECHANICAL FINITE ELEMENT ANALYSIS</b>	<b>203</b>
	<i>J. Moyra J. McDill</i>	
10.1	Introduction . . . . .	203
10.2	8- to 26-Node Linear Hexahedron . . . . .	204
10.3	A Nonconforming 8- to 26-Node Hexahedron . . . . .	207
10.4	Nonconforming Elements in Thermal-Mechanical Analysis . . . . .	210
10.5	8- to 16-Node Solid Shell . . . . .	212
10.6	Solid Shell Elements in Thermal-Mechanical Analysis . . . . .	220
10.7	Contributions . . . . .	224
	References . . . . .	225
	Nomenclature . . . . .	227
<b>11</b>	<b>QUANTIZATION EFFECTS IN SHALLOW POWDER BED VIBRATIONS</b>	<b>229</b>
	<i>Joseph Pegna Jun Zhu</i>	
11.1	Introduction . . . . .	229
11.2	Review and Discussion of Prior Works . . . . .	232
	11.2.1 Notation . . . . .	233
	11.2.2 Literature survey . . . . .	235
	11.2.3 Discussion . . . . .	239
11.3	Periodic Response with Soft Landing . . . . .	242
11.4	Low Velocity Impact Model . . . . .	246
11.5	Quantization Effects . . . . .	249
	11.5.1 Digital experiments . . . . .	249
	11.5.2 Classical elastic impact model . . . . .	250
	11.5.3 Low velocity impact model . . . . .	251
	11.5.4 Quantum influence . . . . .	253

11.5.5 Existence and uniqueness of quantized states . . . .	254
11.5.6 Stability of quantized states . . . . .	255
11.6 Conclusion . . . . .	256
References . . . . .	257
