

CONTENTS

Preface	v
<i>H. Iwai, Y. Nishi, M. S. Shur, and H. Wong</i>	
Photographs at WOFE 2004	
I. Frontiers in Electronics: Technology Trends and Future Concepts	1
Are we at the End of CMOS Scaling?	3
<i>G. G. Shahidi</i>	
3D Size Effects in Advanced SOI Devices	9
<i>S. Cristoloveanu, R. Ritzenthaler, A. Ohata, and O. Faynot</i>	
Frontiers of Nano-Bio System	31
<i>C-Y. Chang</i>	
Challenges For Future Semiconductor Manufacturing	43
<i>H. Iwai, K. Kakushima, and H. Wong</i>	
Nanoelectronics – Opportunities and Challenges	83
<i>H.-S. P. Wong</i>	
Asymmetric Tunneling Source MOSFETS: A Novel Device Solution for Sub-100nm CMOS Technology	95
<i>N. V. Girish, R. Jhaveri, and J. C. S. Woo</i>	
II. CMOS Technology: Nanoscale Physics, New Materials and Structures	103
Analysis of the Effects of Strain in Ultra-Thin SOI MOS Devices	105
<i>N. Barin, C. Fiegna, and E. Sangiorgi</i>	
Device Simulation Demands of Upcoming Microelectronics Devices	115
<i>H. Kosina and S. Selberherr</i>	
SON (Silicon On Nothing) Platform for ULSI Era: Technology & Devices	137
<i>T. Skotnicki, S. Monfray, D. Chanemougame, P. Coronel, S. Harrison, D. Dutartre, A. Talbot, C. Fenouillet-Beranger, and S. Borel</i>	

Highly Scaled CMOS Device Technologies with New Structures and New Materials	147
<i>Y. Y. Wang, R. Huang, J. Kang, and S. Zhang</i>	
Performance Limitations of Si CMOS and Alternatives for Nanoelectronics	175
<i>K. C. Saraswat, C. O. Chui, P. Kapur, T. Krishnamohan, A. Nayfeh, A. K. Okyay, and R. S. Shenoy</i>	
CMOS Devices Architectures and Technology Innovations for the Nanoelectronics Era	193
<i>S. Deleonibus, B. De Salvo, T. Ernst, O. Faynot, T. Poiroux, P. Scheiblin, and M. Vinet</i>	
Novel Dielectric Materials for Future Transistor Generations	221
<i>G. Bersuker, B. H. Lee, and H. R. Huff</i>	
Bond Strain and Defects at Si-SiO ₂ and Dielectric Interfaces in High-k Gate Stacks	241
<i>G. Lucovsky</i>	
Conduction Band-Edge States Associated with Removal of d-State Degeneracies by the Static Jahn-Teller Effect	263
<i>G. Lucovsky</i>	
Advanced Cooling Technologies For Microprocessors	301
<i>T. W. Kenny, K. E. Goodson, J. G. Santiago, E. Wang, J-M. Koo, L. Jiang, E. Pop, S. Sinha, L. Zhang, D. Fogg, S. Yao, R. Flynn, C-H. Chang, and C. H. Hidrovo</i>	
A New Approach to Characterize and Predict Lifetime of Deep-Submicron NMOS Devices	315
<i>Z. Cui, J. J. Liou, Y. Yue, and H. Wong</i>	
Undoped Body Symmetric Double Gate MOSFET Modeling	325
<i>F. J. García-Sánchez, A. Ortiz-Conde, and J. Muci</i>	
III. CMOS Technology: Device and Process Characterization	351
Study of the Gate Insulator/Silicon Interface Utilizing Soft and Hard X-Ray Photoelectron Spectroscopy at SPring-8	353
<i>T. Hattori, H. Nohira, K. Azuma, K. W. Sakai, K. Nakajima, M. Suzuki, K. Kimura, Y. Sugita, E. Ikenaga, K. Kobayashi, Y. Takata, H. Kondo, and S. Zaima</i>	

Deformable Electronic Surfaces	365
<i>J. C. Sturm, P. I. Hsu, H. Gleskova, R. Bhattacharya, and S. Wagner</i>	
Current Issues and Future Prospects of Lithography	375
<i>S. Okazaki</i>	
A Theoretical Study of Point Defects in Zirconia — Silicon Interfaces	389
<i>M. Nakatomi and K. Yamashita</i>	
Elastomeric Interconnects	397
<i>S. P. Lacour, J. Jones, S. Wagner, T. Li, and Z. Suo</i>	
IV. Nanowire/Nanotube and Quantum Device	409
On the Possibility of an Intersubband Laser in Silicon-on-Insulator	411
<i>S. Luryi and A. Zaslavsky</i>	
Toward Ultra-Low Power III-V Quantum Large Scale Integrated Circuits for Ubiquitous Network Era	421
<i>H. Hasegawa, S. Kasai, and T. Sato</i>	
Ballistic Electron Acceleration Negative-Differential-Conductivity Devices	437
<i>L. F. Eastman, W. J. Schaff, H-Y. Cha, X-D. Chen, M. G. Spencer, and B. K. Ridley</i>	
Current Instability and Plasma Wave Generation in Ungated Two Dimensional Electron Layers	443
<i>M. Dyakonov and M. S. Shur</i>	
V. Spintronics and Emerging High-Speed Devices	453
High-Power Switching Using III-Nitride Metal-Oxide-Semiconductor Heterostructures	455
<i>G. Simin, M. S. Shur, R. Gaska and M. A. Khan</i>	
Recent Progress on GaN-Based Electron Devices	469
<i>Y. Uemoto, Y. Hirose, T. Murata, H. Ishida, M. Hikita, M. Yanagihara, K. Inoue, T. Tanaka, D. Ueda, and T. Egawa</i>	
Advancements in Nanoelectronic SONOS Nonvolatile Semiconductor Memory (NVSM) Devices and Technology	479
<i>M. H. White, Y. Wang, S. J. Wrazien, and Y. Zhao</i>	
A Quantum Dot Microcavity Terahertz Laser	503
<i>G. S. Solomon, Z. G. Xie, and M. Agrawal</i>	

The Growth and Characterization of Room Temperature Ferromagnetic Wideband-Gap Materials For Spintronic Applications	515
<i>M. H. Kane, M. Strassburg, W. E. Fenwick, A. Asghar, and I. T. Ferguson</i>	
Enhancing Power Electronic Devices with Wide Bandgap Semiconductors	545
<i>B. Ozpineci, M. S. Chinthavali, and L. M. Tolbert</i>	
VI. Optoelectronics	557
Feasibility of an Optical Frequency Modulation System for Free-Space Optical Communications	559
<i>S. Luryi and M. Gouzman</i>	
Recent Development of Sb-Based Phototransistors in the 0.9- to 2.2- μm Wavelength Range For Applications to Laser Remote Sensing	567
<i>M. N. Abedin, T. F. Refaat, O. V. Sulima, and U. N. Singh</i>	
Ultra Violet Detection Sensors	583
<i>V. Nerguizian, M. Rafaf, M. Packirisamy, and I. Stiharu</i>	
Tunable Coherent Radiation from Terahertz to Microwave by Mixing Two Infrared Frequencies in a 47-mm-Long GaSe Crystal	589
<i>W. Shi and Y. J. Ding</i>	
High Power Type-I GaSb-Based Lasers	597
<i>G. Belenky, L. Shterengas, J. G. Kim, R. U. Martinelli, and S. Suchalkin</i>	
VII. Terahertz Devices and Concepts	607
Bio-Molecular Inspired Electronic Architectures for Enhanced Sensing of THz-Frequency Bio-Signatures	609
<i>D. L. Woolard, Y. Luo, B. L. Gelmont, T. Globus, and J. O. Jensen</i>	
Spin Dependent Transport in Quantum and Classically Configured Devices	639
<i>H. L. Grubin and H. L. Cui</i>	
Biologically-Inspired Chemically-Directed Self-Assembly of Semiconductor Quantum-Dot-Based Systems: Phonon-Hole Scattering in DNA Bound to DNA-Quantum-Dot Complexes	659
<i>M. A. Stroscio and M. Dutta</i>	

Terahertz Signal Transmission in Molecular Systems <i>L. Yan, Y. Ma, and J. M. Seminario</i>	669
Simulating Nanoscale Semiconductor Devices <i>M. S. Lasater, C. T. Kelley, A. G. Salinger, D. L. Woolard, and P. Zhao</i>	677
VIII. Novel Devices and Applications	691
Recent Progresses of Application-Oriented MEMS Through Industry-University Collaboration <i>M. Esashi</i>	693
Mixed-Valence Transition Metal Complex Based Integral Architecture for Molecular Computing (I): Attachment of Linker Molecule to Silicon (100) – 2×1 Surface <i>P. Zhao, D. L. Woolard, J. M. Seminario, and R. Trew</i>	705
Silicon Fibre Technology Development for Wearable and Ambient Electronics Applications <i>T. Healy, J. Donnelly, B. O'Neill, J. Alderman, and A. Mathewson</i>	713
Silicon-Based Integrated MOSFETs and MESFETs: A New Paradigm for Low Power, Mixed Signal, Monolithic Systems Using Commercially Available SOI <i>J. Yang, A. Balijepalli, T. J. Thornton, J. Vandersand, B. J. Blalock, M. E. Wood, and M. M. Mojarradi</i>	723
Design, Modeling, Testing, and Spice Parameter Extraction of DIMOS Transistor in 4H-Silicon Carbide <i>M. Hasanuzzaman, S. K. Islam, L. M. Tolbert, and B. Ozpineci</i>	733
Author Index	747
