Dedication and Motivation	v
<i>Preface</i>	vii
1. Physical Ideas Underlying SPAM	1
1.1 Motivation and Summary	1
1.2 Particles <i>versus</i> Continua	3
1.3 Newton's Particle Mechanics	4
1.4 Eulerian and Lagrangian Continuum Mechanics	9
1.5 Computer Simulation of Microscopic Particle Motion	14
1.6 Liouville's Theorem; Statistical Mechanics	16
1.7 Simulating Continua with Particles	20
1.8 SPAM [S mooth P article A ppplied M echanics]	24
1.9 Example: A Molecular Dynamics Simulation	26
1.10 References	31
2. Continuum Mechanics	33
2.1 Summary and Scope of Continuum Mechanics	33
2.2 Evolution Equations for Fluids and Solids	35
2.3 Initial and Boundary Conditions	39
2.4 Constitutive Equations for Equilibrium Fluids	42
2.5 Constitutive Relations for Nonequilibrium Fluids	45
2.6 Artificial Viscosity and Conductivity	46
2.7 Constitutive Relations for Elastic Solids	48
2.8 Constitutive Relation for Nonequilibrium Plasticity	52
2.9 Plasticity Algorithm	55

2.10	Example: Heat Conduction in One Dimension	58
2.11	Example: Sound Propagation in One Dimension	59
2.12	Example: Rayleigh-Bénard Flow in Two Dimensions	60
2.13	References	64
3.	Smooth Particle Methods	65
3.1	Summary	65
3.2	Motivation	66
3.3	Basic Equations	67
3.4	Interpolation on an Irregular Grid	68
3.5	Alternative Averages: $[f_0, f_1, f_2, \dots]$	71
3.6	Weight Functions	74
3.7	Continuity Equation from $\nabla \cdot v$ with SPAM	80
3.8	Evaluating the Spatial Derivatives $\{\nabla\rho, \nabla \cdot P, \nabla \cdot Q\}$	82
3.9	SPAM Equation of Motion and Energy Equation	83
3.10	Rezoning; Does Particle Size Matter?	84
3.11	Ideal-Gas Isomorphism with SPAM	85
3.12	Evaluating the Spatial Derivatives $\{\nabla v, \nabla T\}$	87
3.13	von Neumann-Richtmyer Artificial SPAM Viscosity	89
3.14	Example: Adiabatic Atmospheric Equilibrium	91
3.15	Example: Isothermal Atmospheric Equilibrium	94
3.16	References	97
4.	Computer Programming	99
4.1	Summary	99
4.2	FORmula TRANslation languages	100
4.3	Designing a SPAM program	105
4.4	Runge-Kutta Integration with Fortran and C	112
4.5	A Useful Random Number Generator	117
4.6	Graphic Displays and Analysis	119
4.7	“Debugging” Tools—Finding Errors	125
4.8	Parallel Computing	128
4.9	Mesh Partitioning	131
4.10	Message Passing Techniques	133
4.11	Material Interfaces in Parallel Computing	136
4.11.1	Concentric Annuli Undergoing Rotation	137
4.11.2	Free Expansion Problem	138
4.11.3	Crushing of an Elastic-Plastic Sheet	139

4.11.4	Caricature of a Billiard Table	140
4.12	References	142
5.	Initial and Boundary Conditions, Interpolation	143
5.1	Summary	143
5.2	Initial Coordinates	144
5.3	Mesh Generation for SPAM with Free Boundaries	147
5.4	Implementing Periodic and Mirror Boundaries	150
5.5	Alternative Meshes—Regular Lattices	156
5.6	Elastic Stability of Embedded-Atom Lattices	157
5.7	Invariant Curvature Crystal Stabilization	162
5.8	Example: Heat Transfer in One Dimension with SPAM	164
5.9	Example: Periodic Shear Flow with SPAM	167
5.10	Example: Rayleigh-Bénard Flow with SPAM	171
5.11	References	175
6.	Convergence and Stability	177
6.1	Summary	177
6.2	Existence and Uniqueness in Continuum Mechanics	178
6.3	Accuracy and Precision in Numerical Solutions	180
6.4	Convergence of Numerical Methods	180
6.5	Runge-Kutta Integration of Linear Problems	181
6.6	Stability	184
6.7	Lyapunov Instability	186
6.8	Stability Analysis for a Chaotic Problem	188
6.9	Size Dependence: Lessons from Molecular Dynamics	190
6.10	Smooth-Particle Spatial Integration Errors	191
6.11	Lattice Instability	192
6.12	Even-Odd Instability	195
6.13	Example: Shear-Flow Convergence	196
6.14	References	199
7.	Lucy and Embedded-Atom Fluids	201
7.1	Summary	201
7.2	Trajectory Isomorphism for the Lucy Fluid	202
7.3	Statistical Thermodynamics for the Lucy Potential	203
7.4	Trajectory Isomorphism for the Embedded-Atom Fluid	205
7.5	Embedded-Atom Approach to Structural Relaxation	207

7.6	Example: Embedded-Atom Gravitational Relaxation . . .	208
7.7	Example: Embedded-Atom Model of Falling Water . . .	211
7.8	Example: Free Expansion of a γ -law Gas	213
7.9	Example: Lucy-Fluid Shockwave Structure	217
7.10	References	225
8.	SPAM: Limitations and Difficulties	227
8.1	Summary	227
8.2	Surface Tension	227
8.3	Tensile Instability	231
8.4	Monaghan's Motion Equations	233
8.5	Continuum Mechanics: Stress; Rigid-Body Rotation . . .	236
8.6	Dynamic and Static Constitutive Relations	237
8.7	Example Deformations with Stress and Strain Rates . . .	241
8.8	Dynamics with Jaumann's Stress Rotation Rate	244
8.9	Conservation of Angular Momentum	246
8.10	Artificial Transport Coefficients	248
8.11	Residual Stress—Artificial Plasticity in SPAM	249
8.12	References	251
9.	SPAM: Sample Applications to Solids	253
9.1	Summary	253
9.2	The Tension Test	254
9.3	Tension Test <i>via</i> Standard Molecular Dynamics	256
9.4	Boundary Conditions for Tension	257
9.5	Initial Conditions for Tension Using SPAM	260
9.6	Tension Test <i>via</i> SPAM-like Molecular Dynamics	261
9.7	Tension Test <i>via</i> SPAM	263
9.8	Failure Algorithms	266
9.9	Penetration Mechanics	266
9.10	Penetration <i>via</i> Continuum Mechanics	267
9.11	Penetration <i>via</i> Standard Molecular Dynamics	270
9.12	Penetration <i>via</i> SPAM-like Molecular Dynamics	271
9.13	Penetration <i>via</i> SPAM	272
9.14	A Research Suggestion	275
9.15	References	276

10. Summary, Literature, and Outlook	277
10.1 Introduction	277
10.2 Current State of the Art	278
10.3 Cutting and Machining	279
10.4 Structural Response to Waves	280
10.5 Dynamics of Sea Ice	281
10.6 Astrophysics	283
10.7 The Near Future of Parallel Computing	285
10.8 An Afterword	286
10.9 References	287
<i>Alphabetical Bibliography</i>	289
<i>Index</i>	295
<i>Example Problem List</i>	299
