<i>Preface</i>	vii
Introduction	1
1. Approximation of Square-Roots and Their Visualizations	13
1.1 Introduction . . . . .	13
1.2 A Simple Algebraic Method for Approximation of Square-Roots . . . . .	17
1.3 High-Order Algebraic Methods for Approximation of Square-Roots . . . . .	18
1.4 Convergence Analysis . . . . .	19
1.5 Approximation of Square-Roots from Complex Inputs . . . . .	21
1.6 The Basic Sequence and Fixed Point Iterations . . . . .	24
1.7 Determinantal Representation of High-Order Iteration Functions and Basic Sequence . . . . .	25
1.8 Visualizations in Approximation of Square-Roots . . . . .	27
1.9 High-Order Methods for Approximation of Cube-Roots . . . . .	30
1.10 Complexity of Sequential Versus Parallel Algorithms . . . . .	35
1.11 Extensions . . . . .	38
2. The Fundamental Theorem of Algebra and a Special Case of Taylor's Theorem	39
2.1 Introduction . . . . .	39
2.2 Algebraic Derivation of Newton's Method . . . . .	40
2.3 A Recurrence Relation and the Basic Family . . . . .	45
2.4 Conclusions . . . . .	46

3.	Introduction to the Basic Family and Polynomiography	49
3.1	Introduction . . . . .	49
3.2	The Basic Family and its Properties . . . . .	51
3.3	Polynomiography and Its Applications . . . . .	60
4.	Equivalent Formulations of the Basic Family	71
4.1	Determinantal Formulation of the Basic Family . . . . .	71
4.2	Properties of a Determinant . . . . .	72
4.3	Gerlach's Method . . . . .	74
4.4	Equivalence to the Basic Family . . . . .	75
4.5	König's Family and Equivalence to the Basic Family . . .	78
4.6	Notes and Remarks . . . . .	79
5.	Basic Family as Dynamical System	81
5.1	Introduction . . . . .	82
5.2	Iterations of a Rational Function . . . . .	86
5.3	Newton's Method and Connections to Mandelbrot Set . .	92
5.4	Analysis of Infinity as Fixed Point . . . . .	100
5.5	Möbius Transformations and Conjugacy . . . . .	101
5.6	Periodic Points and Cycles of a Rational Function . . . .	104
5.7	Critical Points and Their Cardinality . . . . .	107
5.8	Cardinality of Periodic Points of Different Types . . . . .	111
5.9	Local Behavior of Iterations Near Fixed Points . . . . .	113
5.10	Local Behavior of Iterations Near General Points: Equicon- tinuity and Normality . . . . .	119
5.11	Fatou and Julia Sets and Their Basic Properties . . . . .	123
5.12	Montel Theorem and Characterization of Fatou and Julia Sets . . . . .	126
5.13	Fatou and Julia Sets as: The Good, The Bad, and The Undesirable . . . . .	132
5.14	Fatou Components and Their Dynamical Properties . . .	135
5.15	Critical Points and Connection with Periodic Fatou Com- ponents . . . . .	139
5.16	Fatou-Julia and Topological Fatou-Julia Graphs: Analog- ies for Visualization and Conceptualization of Dynamics	145
5.17	Lakes and Waterfalls: Analogy for Dynamics of Rational Maps . . . . .	150
5.18	General Convergence: Algorithmic Limitation of Iterations	152

5.19	A Summary for the Behavior of Iteration Functions . . . .	163
5.20	Undecidability Issues in Rational Functions . . . . .	164
6.	Fixed Points of the Basic Family	171
6.1	Introduction . . . . .	171
6.2	Properties of the Fixed Points of the Basic Family . . . .	172
6.3	Proof of Main Theorem . . . . .	173
7.	Algebraic Derivation of the Basic Family and Characterizations	175
7.1	Introduction . . . . .	175
7.2	Algebraic Proof of Existence of the Basic Family . . . . .	179
7.3	Derivation of Closed Form of the Basic Family . . . . .	183
7.4	Two Formulas for Generation of Iteration Functions . . .	187
7.5	Deriving the Euler-Schröder Family . . . . .	190
7.6	Extension to Non-Polynomial Root Finding . . . . .	192
7.7	Conclusions . . . . .	193
8.	The Truncated Basic Family and the Case of Halley Family	195
8.1	The Halley Family . . . . .	195
8.2	The Order and Asymptotic Error of Halley Family . . . .	198
8.3	The Truncated Basic Family . . . . .	202
8.4	Applications . . . . .	203
8.5	Polynomiography with the Truncated Basic Family . . . .	206
8.6	Conclusions . . . . .	206
9.	Characterizations of Solutions of Homogeneous Linear Recurrence Relations	207
9.1	Introduction . . . . .	208
9.2	Homogeneous Linear Recurrence Relations . . . . .	209
9.3	Explicit Representation of the Fundamental Solution . . .	212
9.4	Explicit Representation Via Characteristic Polynomial . .	213
9.5	Approximation of Polynomial Roots Using HLRR . . . . .	217
9.6	Basic Sequence and Connection to the Basic Family . . .	220
9.7	The Basic Sequence and the Bernoulli Method . . . . .	226
9.8	Determinantal Representation of Fundamental Solution .	229
9.9	Application to Fibonacci Sequence and Generalizations .	230
9.10	Experimental Results Via Polynomiography . . . . .	233
9.11	A Representation Theorems for Arbitrary Solutions . . .	233

- 9.12 Applications to Fibonacci and Lucas Numbers . . . . . 238
- 9.13 Concluding Remarks . . . . . 239
- 10. Generalization of Taylor’s Theorem and Newton’s Method . . . . . 243
  - 10.1 Introduction . . . . . 243
  - 10.2 Taylor’s Theorem with Confluent Divided Differences . . . . . 246
    - 10.2.1 Basic Applications . . . . . 249
  - 10.3 The Determinantal Taylor Theorem . . . . . 251
    - 10.3.1 Determinantal Interpolation Formulas . . . . . 254
  - 10.4 Proof of Determinantal Taylor Theorem and Equivalent Form . . . . . 258
  - 10.5 Applications of Determinantal Formulas . . . . . 269
    - 10.5.1 Infinite Spectrum of Rational Approximation Formulas . . . . . 270
    - 10.5.2 Infinite Spectrum of Rational Inverse Approximation Formulas . . . . . 273
    - 10.5.3 Infinite Families of Single and Multipoint Iteration Functions . . . . . 275
    - 10.5.4 Determinantal Approximation of Roots of Polynomials . . . . . 276
    - 10.5.5 A Rational Expansion Formula and Connection to Padé Approximant . . . . . 277
    - 10.5.6 Algebraic Approximation Formulas . . . . . 280
  - 10.6 Concluding Remarks . . . . . 281
- 11. The Multipoint Basic Family and its Order of Convergence . . . . . 283
  - 11.1 Introduction . . . . . 283
  - 11.2 The Multipoint Basic Family . . . . . 284
  - 11.3 Description of the Order of Convergence . . . . . 286
  - 11.4 Proof of the Order of Convergence . . . . . 290
- 12. A Computational Study of the Multipoint Basic Family . . . . . 295
  - 12.1 Introduction . . . . . 295
  - 12.2 The Iteration Functions . . . . . 296
  - 12.3 The Iteration Complexity . . . . . 297
  - 12.4 The Experiment . . . . . 299
  - 12.5 Conclusions . . . . . 304

13. A General Determinantal Lower Bound	305
13.1 Introduction . . . . .	305
13.2 An Application in Approximation of Polynomial Root . .	313
13.3 Conclusions . . . . .	315
14. Formulas for Approximation of Pi Based on Root-Finding Algorithms	317
14.1 Introduction . . . . .	317
14.2 Main Results . . . . .	319
14.3 Auxiliary Results . . . . .	322
14.4 Proof of Main Theorems . . . . .	324
14.5 Applications in Approximation of $\pi$ . . . . .	326
14.6 Special Formulas for Approximation of $\pi$ . . . . .	328
14.7 Approximation of $\pi$ Via the Basic Family . . . . .	332
14.8 A Formula for Approximation of $e$ . . . . .	334
14.9 Concluding Remarks . . . . .	335
15. Bounds on Roots of Polynomials and Analytic Functions	337
15.1 Introduction . . . . .	337
15.2 Estimate to Zeros of Analytic Functions . . . . .	338
15.3 The Basic Family for General Analytic Functions . . . . .	339
15.4 Application of Basic Family in Separation Theorems . . .	342
15.5 Estimate to Nearest Zero and Bounds on Zeros . . . . .	345
15.6 Applications, Asymptotic Analysis, Computational Efficiency and Comparisons . . . . .	349
15.7 Concluding Remarks . . . . .	350
16. A Geometric Optimization and its Algebraic Offsprings	353
16.1 Introduction . . . . .	353
16.2 Elementary Proof of the Gauss-Lucas Theorem and the Maximum Modulus Principle . . . . .	355
16.3 The Gauss Lucas Iteration Function and Extensions of the Maximum Modulus Principle . . . . .	367
16.4 Conclusions . . . . .	371
17. Polynomiography: Algorithms for Visualization of Polynomial Equations	373
17.1 A Basic Coloring Algorithm . . . . .	374

17.2 Basic Family and Variants: The Basis of Polynomiography 375

17.3 Many Polynomiographs of Cubic Roots of Unity . . . . . 376

18. Visualization of Homogeneous Linear Recurrence Relations 381

18.1 Introduction . . . . . 381

18.2 The Generalized Fibonacci, the Hyper Fibonacci, and their Polynomiography . . . . . 383

18.3 The Induced Basic Family and Induced Basic Sequence . 384

18.4 The Fibonacci and Lucas Families of Iteration Functions . 389

18.5 Visualization of HLRR with Arbitrary Initial Conditions . 390

19. Applications of Polynomiography in Art, Education, Science and Mathematics 393

19.1 Polynomiography in Art . . . . . 394

19.1.1 Polynomiography as a Tool of Art and Design . . 398

19.1.2 Polynomiography Based on Voronoi Coloring . . . 401

19.1.3 Polynomiography Based on Levels of Convergence 407

19.1.4 Symmetric Designs from Polynomiography . . . . 412

19.1.5 Polynomiography of Numbers . . . . . 413

19.1.6 Some Extensions of Polynomiography . . . . . 414

19.1.7 Glossary of Terms . . . . . 415

19.2 Polynomiography in Education . . . . . 416

19.2.1 Polynomiography for Encouraging Creativity in Education . . . . . 417

19.2.2 Teacher Survey . . . . . 419

19.2.3 Student Survey . . . . . 419

19.2.4 Developing Seminars and Courses Based on Polynomiography . . . . . 421

19.3 Polynomiography in Mathematics and Science . . . . . 423

19.3.1 Polynomiography for Measuring the Average Performance of Root-finding Algorithms . . . . . 425

19.4 Conclusions . . . . . 428

20. Approximation of Square-Roots Revisited 429

20.1 Regular Continued Fractions and the Basic Family . . . . 429

20.2 Regular Continued Fraction Convergents Versus Basic Sequence Convergents . . . . . 432

20.3	Applications of Continued Fractions and Basic Sequence in Factorization . . . . .	434
20.4	Basic Sequence for Approximation of Higher Roots of a Number and its Factorization . . . . .	439
21.	Further Applications and Extensions of the Basic Family and Polynomiography . . . . .	443
21.0.1	Extensions to Analytic Functions . . . . .	443
21.0.2	Extensions to Other Dimensions or Domains . . . . .	446
21.0.3	Polynomiography for Designing Shapes . . . . .	446
21.1	Toward a Digital Media Based on Polynomiography . . . . .	447
	<i>Bibliography</i> . . . . .	449
	<i>Index</i> . . . . .	459
