Preface vii

Chapter 1. Introduction to Wireless Sensor Networks **1**

1.1 Overview	1
1.2 Enabling Technologies	2
1.2.1 Hardware	2
1.2.2 Wireless Networking	4
1.2.3 Collaborative Signal Processing	5
1.3 Evolution of Sensor Nodes	5
1.3.1 Military Networks of Sensors	6
1.3.2 Next Generation Wireless Sensor Nodes	6
1.3.2.1 WINS from UCLA	6
1.3.2.2 Motes from UC Berkeley	7
1.3.2.3 Medusa from UCLA	9
1.3.2.4 PicoRadio from UC Berkeley	10
1.3.2.5 μ AMPS from MIT	11
1.3.3 Why Microscopic Sensor Nodes?	12
1.4 Applications of Interest	13
1.4.1 Data Gathering Applications	14
1.4.1.1 Habitat Study	14
1.4.1.2 Environmental Monitoring	15
1.4.2 Computation-Intensive Applications	15
1.4.2.1 Structural Health Monitoring	15
1.4.2.2 Heavy Industrial Monitoring	16
1.5 Research Topics and Challenges	17
1.6 Focus of This Book	19

Chapter 2. Background	23
2.1 Data-Centric Paradigm	23
2.2 Collaborative Information Processing and Routing	24
2.3 Cross-Layer Optimization for Energy-Efficiency	27
2.3.1 Motivation	27
2.3.2 Consideration for Collaborative Information Processing and Routing	29
2.4 A Brief Survey of Cross-Layer Optimization for Energy- Efficient Collaborative Information Processing and Routing	31
2.4.1 Hardware Layer	31
2.4.2 Physical Layer	32
2.4.3 MAC Layer	34
2.4.4 Routing Layer	35
2.4.5 Application Layer	37
2.4.6 Summary	38
 Chapter 3. Energy Models	 41
3.1 Definitions and Notations	41
3.1.1 Mathematics and Graphs	41
3.1.2 Network Topology Graph	42
3.1.3 Application Graph	43
3.1.4 Performance Metrics	45
3.2 Energy Models	47
3.2.1 Voltage Scaling	48
3.2.2 Rate Adaptation	49
3.2.3 Tunable Compression	52
 Chapter 4. Information Processing within a Collocated Cluster	 55
4.1 Overview	55
4.1.1 Motivation	55
4.1.2 Technical Overview	56
4.1.3 Chapter Organization	57
4.2 Related Work	57
4.3 Problem Definition	58
4.3.1 System Model	58
4.3.2 Application Model	60
4.3.3 Task Allocation	60

4.4	Integer Linear Programming Formulation	61
4.5	Heuristic Approach	63
4.5.1	Phase 1	64
4.5.2	Phase 2	66
4.5.3	Phase 3	67
4.6	Simulation Results	73
4.6.1	Synthetic Application Graphs	73
4.6.1.1	Simulation Setup	74
4.6.1.2	Small Scale Problems	75
4.6.1.3	Large Scale Problems	77
4.6.1.4	Impact of the Number of Voltage Levels	79
4.6.1.5	Incorporating Rate Adaptation	80
4.6.2	Application Graphs from Real World Problems	81
4.6.2.1	LU Factorization	81
4.6.2.2	Fast Fourier Transformation (FFT)	83
4.7	Summary	87

Chapter 5. Information Transportation over a Tree

	Substrate	89
5.1	Overview	89
5.1.1	Motivation	89
5.1.2	Technical Overview	91
5.1.3	Chapter Organization	92
5.2	Related work	92
5.3	Models and Assumptions	93
5.3.1	Data Gathering Tree	94
5.3.2	Data Aggregation Paradigm	95
5.4	Problem Definition	96
5.5	Off-Line Algorithms for PTP	97
5.5.1	A Numerical Optimization Algorithm	97
5.5.2	Performance Analysis for a Special Case	100
5.5.3	A Dynamic Programming-Based Approximation Algorithm	103
5.6	A Distributed On-Line Protocol	105
5.7	Simulation Results	108
5.7.1	Simulation Setup	108
5.7.2	Performance of the Off-Line Algorithms	111
5.7.2.1	Performance Overview	111
5.7.2.2	Impact of Radio Parameters	112

5.7.3	Performance of the On-Line Protocol	114
5.7.3.1	Performance Overview	115
5.7.3.2	Impact of Network Parameters	115
5.7.3.3	Adaptability to System Variations	116
5.8	Summary	117
Chapter 6. Information Routing with Tunable Compression		121
6.1	Overview	121
6.1.1	Technical Overview	122
6.1.2	Chapter Organization	123
6.2	Related Work	123
6.3	Models and Assumptions	125
6.3.1	Nomenclature	125
6.3.2	Network Model	126
6.3.3	Flow-Based Data Gathering	127
6.3.4	Discussion	128
6.3.5	An Example	129
6.4	Problem Definition	130
6.5	Optimal Flow in a Given Tree	131
6.5.1	Example Revisited	131
6.5.2	Determining the Optimal Flow	132
6.6	Analytical Study of SPT and MST	135
6.6.1	Analysis for a Grid Deployment	135
6.6.2	Tradeoffs Between SPT and MST	139
6.6.2.1	Tradeoffs for Entropy Model E1	140
6.6.2.2	Tradeoffs for Entropy Model E2	141
6.6.2.3	SPT is optimal for Entropy Model E3	142
6.6.3	Summary of Grid Deployment	142
6.7	A Randomized $O(\log^2 v)$ Approximation	142
6.8	Simulation Results	145
6.8.1	Simulation Setup	145
6.8.2	Results	146
6.8.2.1	Main Results	146
6.8.2.2	Impact of the number of source nodes $ \mathbb{R} $	148
6.8.2.3	Impact of the communication range r	148
6.9	Summary	148

Chapter 7. Conclusions	153
7.1 Concluding Remarks	153
7.2 Future Work	155
7.2.1 Adaptive Fidelity Algorithms	155
7.2.2 A Broad View of Future Research	156
7.2.2.1 Mobile Sensor Nodes	156
7.2.2.2 Routing Diversity	157
7.2.2.3 Sleep Scheduling	158
<i>Bibliography</i>	161
Appendix A Correctness of EMR-Algo	175
Appendix B Performance Bound of SPT and MST for TDG problem with grid deployment	181
<i>Index</i>	183
