<b>Preface</b>	<b>vii</b>
<b>0. Calculus in Terms of Images:</b>	<b>1</b>
0.1. Hill Behavior and Slope . . . . .	1
0.2. Hill Height and Slope: Unconstructive Tangent Formula . . . . .	2
0.3. Review for FT . . . . .	5
0.4. Hillside Length and Slope: Pythagoras Theorem . . . . .	9
0.5. Area and Slope . . . . .	10
0.6. Explaining All of Calculus in a Single Figure . . . . .	11
0.7. Calculus and Novels . . . . .	12
<b>1. Official Calculus:</b>	<b>15</b>
1.0. A Case: Height and Slopes . . . . .	15
1.1. Translating into Function Language . . . . .	17
1.2. Generalized First Inequality . . . . .	30
1.3. Generalized Second Inequality . . . . .	31
1.4. Rules of Differentiation . . . . .	33
1.4.1. Arithmetic of derivatives . . . . .	33
1.4.2. Derivatives of rational functions and trigonometric functions	36
1.4.3. Derivatives of composite functions and inverse functions .	37

1.5. Tables of Derivatives and Integrals . . . . .	39
1.6. Rules of Integration . . . . .	40
1.7. A Calculus Net . . . . .	42
1.8. Taylor’s Series . . . . .	44
1.9. Euler’s Formula . . . . .	45
1.10. Possible Generalizations . . . . .	46
<b>2. Differential Equations of First Order</b>	<b>51</b>
2.1. A Simplest Differential Equation . . . . .	51
2.2. Varieties of Simplest Differential Equation . . . . .	52
2.2.1. The test equation . . . . .	52
2.2.2. Linear differential equation . . . . .	54
2.2.3. Separable equation . . . . .	54
2.3. More General Equations . . . . .	55
2.4. Tests for Euler’s Algorithm . . . . .	55
2.5. General Euler’s Algorithm . . . . .	57
<b>3. Differential Equations of Second Order</b>	<b>59</b>
3.1. Initial Value Problems . . . . .	59
3.2. Eigenvalue Problem . . . . .	63
3.3. Boundary Value Problem . . . . .	65
3.4. Weak Equation . . . . .	66
3.5. Finite Element Solution and Interpolation . . . . .	68
3.6. Generalization . . . . .	69
3.7. Summary . . . . .	72

<b>4. Free Calculus</b>	<b>73</b>
4.1. Function Spaces, Norms, and Triangle Inequality . . . . .	73
4.2. Angle and Schwartz's Inequality . . . . .	77
4.3. Inner Product . . . . .	78
4.4. Orthogonality and Projection . . . . .	79
4.5. Different Inner Products and Norms . . . . .	81
4.6. Abstract Calculus . . . . .	82
<b>Appendix</b>	<b>83</b>
<b>Calculus of Functional Analysis Becomes Elementary Algebra</b>	<b>85</b>
1. Introduction . . . . .	85
2. Derivative Definition Becomes an Elementary Inequality . . . . .	85
3. Fundamental Theorem Becomes Another Elementary Inequality . . . . .	86
Acknowledgments . . . . .	87
References . . . . .	88
<b>Bibliography</b>	<b>89</b>
