

Contents

Preface	xvii
Part I: THE WANDERING YEARS (1930–1974)	1
Section I: <i>Czernowitz, a City of People and Books that No Longer Exists (1930–1945)</i>	3
Chapter 1. Childhood	5
My Countries	5
My Languages	8
My Family	13
My Schools	16
Chapter 2. Politics — Premonition of War	21
Making Ends Meet	26
Chapter 3. War — The Ghetto	27

Section II: <i>Post-War Romania; The Isomeric Shift; Persona Non Grata (1945–1969)</i>	31
Chapter 4. High School and University	33
Focşani 1945–1949	33
Bucharest	37
University	39
Theoretical Physics	44
Chapter 5. The Isomeric Shift on Spectral Lines	47
The Discovery of the Isomeric Shift	47
Finite Size Effects in Subatomic Physics	48
Natural Line Width and the Limits of Optical Spectroscopy	49
Atomic Versus Nuclear Shells, the Pauli Exclusion Principle and the Nuclear Shell Model	53
The Isomeric Shift and the Shell Structure of Nuclei . . .	54
Some Confusion of Terminology	59
The Mössbauer Effect	60
Dubna — 1958	64
Chapter 6. Persona Non Grata	70
Applying for Emigration and Its Consequences	70
The Romanian Thaw	76
Interdiction to Leave for the West	80
Nuclear Recoil in Muonic Atoms	82

Chapter 7. Challenging Conventional Wisdom in Particle Physics	84
Anticipating Electro-Weak Unification?	85
Anticipating Supersymmetry? Exotic Particles — Bosonic Leptons	87
Anticipating Grand Unified Theories? Exotic Particles — Strange Leptons	88
The Escape	89
Czechoslovakia	94
Chapter 8. Nazi-Communist Analogy	100
Section III: <i>Geneva, Bonn; Statistical Concepts in High-Energy Physics (1969–1974)</i>	105
Chapter 9. CERN	107
From Vienna to Geneva	107
CERN	109
Uproar in the Media	111
Physics at CERN	118
Strong Interaction Phenomenology; Regge Poles and Duality	119
The Münchhausen Principle	121
Chapter 10. Statistical Concepts in High-Energy Physics; Phase Transitions	123

Section IV: <i>Bonn, Bloomington (Indiana), London; Superfluidity of Hadronic Matter (1970–1974)</i>	129
Chapter 11. Bonn	131
Chapter 12. USA	138
Indiana University	140
A Letter from the White House	144
The Mesonic Cloud of the Nucleon and Superfluidity . .	146
Chapter 13. London, Imperial College	151
Trips on the Continent	155
Superfluidity and Symmetries	157
Superfluidity and Superconductivity: Analogies and Follow-ups	160
Related Developments	163
Superfluidity of Hadronic Matter in Retrospective . . .	164
Statistical Concepts Applied to Weak Interactions	165
Part II: SETTLING YEARS (1974–PRESENT)	169
Section V: <i>Marburg; Hot Spots</i>	171
Chapter 14. Professor at the Philipps University of Marburg	173
Citizenship	176

Chapter 15. Hot Spots in “Elementary” Particles and in Nuclei	182
Propagation of Heat in Hadronic Matter	182
Hot Spots in Nuclei	189
Meeting Bethe	190
Section VI: <i>Germany’s Coping with the Past; The Hydrodynamical Analogy</i>	195
Chapter 16. Rewriting History	197
The German A-bomb	199
Attempts to Justify the Past	202
Ignoring History	203
Misunderstanding the Past	206
Coping with the Communist Past of East Germany . . .	208
Chapter 17. From Superfluids to Fluids; The Hydrodynamical Analogy Applied to Multiparticle Production in Strong Interactions	210
The Landau Model Rules the Waves in Nuclei as Well	214
Equation of State and the Speed of Sound in Hadronic Matter	217
Initial Conditions in the Landau Model: Inelasticity and Lorentz Contraction	219
Local Equilibrium — The LESIP Meetings	220

Section VII: <i>Einstein in Marburg; Solitons; The Auschwitz “Experiments”</i>	225
Chapter 18. Einstein Criticized in a Marburg Colloquium	227
Hagedorn’s Paper Submitted for Publication to <i>Physikalische Blätter</i>	235
<i>Albrecht Unsöld — what follows after that?</i>	235
Chapter 19. From Hot Spots to Solitons — On Revient Toujours au Vieil Amour	246
Density Solitons	247
From Jupiter to Atomic Nuclei — Solitons in Rotating Nuclei	250
Chapter 20. Caught Up Again by the Past	252
The Einstein Scandal: Follow-ups 1983–1989	252
The Auschwitz “Experiments”	254
Section VIII: <i>From Optics to Particle Physics; Traveling to the East</i>	257
Chapter 21. Quantum Optical Analogies and Methods in Strong Interactions High-Energy Physics	259
Chapter 22. Bose-Einstein Correlations	265
Attempts of Falsification	269
Some Pions Are More Equal Than Others and Some Unequal Pions Are More Unequal Than Others . . .	272

Chapter 23. Order and Chaos	276
From Correlation to Multiplicity Distributions	277
The Time-Rapidity Analogy	278
Self-Induced Transparency in Proton-Nucleus Reactions; A Filter for Production of Coherent Pion Beams? .	281
Superradiance in Heavy Ion Reactions	283
Superfluorescence and the Centauro Effect	284
Squeezed States	285
 Chapter 24. Traveling to the East	 291
 Section IX: <i>From Germany to France; Quark-Gluon Plasma; A Literary Intermezzo; Reflections (1995–Present)</i>	 295
 Chapter 25. Moving to Paris	 297
 Chapter 26. France Versus Germany, Personal Impressions	 300
French Impressions from a Scientist’s Point of View . . .	300
Linguistic Impressions	303
Law and Order	305
Social and Political Differences	306
The Principle of Presumed Innocence	310
The Outreau Affair	312
Foreign Policy	313
Anti-Semitism	314
Political Correctness in Germany and France	318

Schools and Religion	321
German–French Convergence	322
Section X: <i>Quark-Gluon Plasma; A Literary Intermezzo; Reflections</i>	325
Chapter 27. Quark-Gluon Plasma, Another Old Love	327
Where, Actually, Does Asymptotic Freedom Begin? From Supefluidity to Strongly Interacting Quark-Gluon Plasma	328
Anticipating Strongly Interacting Quark Matter; the Archimede Effect as a Model for Confinement of Quarks and Gluons	331
Chapter 28. Evidence for Quark-Gluon Plasma from Particle Physics	334
The Mystery of the Large Number of Degrees of Freedom	335
Some History	336
Large Transverse Momenta and Another Analogy: Leakage	338
Multiplicity Distributions	340
Global Equilibrium: The Universality of the Hadronization Process	341
Atomic Mass Dependence of Multiplicity	342
Chapter 29. Evidence for Quark-Gluon Plasma from Heavy Ion Reactions	344
Traces of QGP in Low Energy Heavy Ion Reaction? . . .	344

An Excursion Into Cosmology	346
Solving Exactly the Equations of Hydrodynamics	348
Outlook	350
Chapter 30. A Literary Intermezzo: The Mini-Atom Project	353
Chapter 31. Reflections	356
Breakdown of Analogies: Mysteries of Modern Physics	356
Classical Versus Quantum Physics	357
Intuition and Analogies: Three Definitions of Intuition	360
Referees, Editors, and Publishers	361
Original Papers	361
Review Papers	364
Fiction	365
Appendix 1	366
Statistical Duality	366
List of Publications	368
Notes and References	383
Index	395
