Preface	v
<b>1 Equilibrium Electrochemistry and the Nernst Equation</b>	<b>1</b>
1.1 Chemical Equilibrium . . . . .	1
1.2 Electrochemical Equilibrium: Introduction . . . . .	5
1.3 Electrochemical Equilibrium: Electron Transfer at the Solution–Electrode Interface . . . . .	9
1.4 Electrochemical Equilibrium: The Nernst Equation . . . . .	11
1.5 Walther Hermann Nernst . . . . .	17
1.6 Reference Electrodes and the Measurement of Electrode Potentials	19
1.7 The Hydrogen Electrode as a Reference Electrode . . . . .	26
1.8 Standard Electrode Potentials and Formal Potentials . . . . .	27
1.9 Formal Potentials and Experimental Voltammetry . . . . .	30
1.10 Electrode Processes: Kinetics vs. Thermodynamics . . . . .	32
<b>2 Electrode Kinetics</b>	<b>35</b>
2.1 Currents and Reaction Fluxes . . . . .	35
2.2 Studying Electrode Kinetics Requires Three Electrodes . . . . .	37
2.3 Butler–Volmer Kinetics . . . . .	40
2.4 Standard Electrochemical Rate Constants and Formal Potentials	43
2.5 The Need for Supporting Electrolyte . . . . .	45
2.6 The Tafel Law . . . . .	46
2.7 Julius Tafel . . . . .	47
2.8 Multistep Electron Transfer Processes . . . . .	49
2.9 Tafel Analysis and the Hydrogen Evolution Reaction . . . . .	52
2.10 B. Stanley Pons . . . . .	57
2.11 Cold Fusion–The Musical! . . . . .	58

2.12	Why are Some Standard Electrochemical Rate Constants Large but Others Slow? The Marcus Theory of Electron Transfer: An Introduction . . . . .	60
2.13	Marcus Theory: Taking it Further. Inner and Outer Sphere Electron Transfer . . . . .	66
2.14	Marcus Theory: Taking it Further. Adiabatic and Non-Adiabatic Reactions . . . . .	67
2.15	Marcus Theory: Taking it Further. Calculating the Gibbs Energy of Activation . . . . .	70
2.16	Relationship between Marcus Theory and Butler–Volmer Kinetics	73
2.17	Marcus Theory and Experiment. Success! . . . . .	74
<b>3</b>	<b>Diffusion</b>	<b>77</b>
3.1	Fick's 1st Law of Diffusion . . . . .	77
3.2	Fick's 2nd Law of Diffusion . . . . .	79
3.3	The Molecular Basis of Fick's Laws . . . . .	81
3.4	How Did Fick Discover His Laws? . . . . .	83
3.5	The Cottrell Equation: Solving Fick's 2nd Law . . . . .	88
3.6	The Cottrell Problem: The Case of Unequal Diffusion Coefficients	92
3.7	The Nernst Diffusion Layer . . . . .	94
3.8	Mass Transfer vs. Electrode Kinetics: Steady-State Current-Voltage Waveshapes . . . . .	97
3.9	Mass Transport Corrected Tafel Relationships . . . . .	100
<b>4</b>	<b>Cyclic Voltammetry at Macroelectrodes</b>	<b>107</b>
4.1	Cyclic Voltammetry: The Experiment . . . . .	107
4.2	Cyclic Voltammetry: Solving the Transport Equations . . . . .	109
4.3	Cyclic Voltammetry: Reversible and Irreversible Kinetics . . . . .	111
4.4	What Dictates 'Reversible' and 'Irreversible' Behaviour? . . . . .	119
4.5	Reversible and Irreversible Behaviour: The Effect of Voltage Scan Rate . . . . .	120
4.6	Reversible versus Irreversible Voltammetry: A Summary . . . . .	126
4.7	The Measurement of Cyclic Voltammograms: Three Practical Considerations . . . . .	127
4.8	The Effect of Unequal Diffusion Coefficients, $D_A \neq D_B$ . . . . .	129
4.9	Multiple Electron Transfer: Reversible Electrode Kinetics . . . . .	133
4.10	Multiple Electron Transfer: Irreversible Electrode Kinetics . . . . .	142
4.11	The Influence of pH on Cyclic Voltammetry . . . . .	147

<b>5</b>	<b>Voltammetry at Microelectrodes</b>	<b>153</b>
5.1	The Cottrell Equation for a Spherical or Hemispherical Electrode	153
5.2	Potential Step Transients at Microdisc Electrodes . . . . .	158
5.3	Microelectrodes have Large Current Densities and Fast Response Times . . . . .	159
5.4	Applications of Potential Step Chronoamperometry Using Microdisc Electrodes . . . . .	161
5.5	Double Potential Step Microdisc Chronoamperometry Exploring the Diffusion Coefficient of Electrogenerated Species . . . . .	164
5.6	Cyclic and Linear Sweep Voltammetry Using Microdisk Electrodes	172
5.7	Steady-State Voltammetry at the Microdisc Electrode . . . . .	182
5.8	Microelectrodes versus Macroelectrodes . . . . .	183
5.9	Ultrafast Cyclic Voltammetry: Megavolts per Second Scan Rates .	187
5.10	Ultrasmall Electrodes: Working at the Nanoscale . . . . .	188
<b>6</b>	<b>Voltammetry at Heterogeneous Surfaces</b>	<b>193</b>
6.1	Partially Blocked Electrodes . . . . .	193
6.2	Microelectrode Arrays . . . . .	209
6.3	Voltammetry at Highly Ordered Pyrolytic Graphite Electrodes . .	215
6.4	Electrochemically Heterogeneous Electrodes . . . . .	219
6.5	Electrodes Covered with Porous Films . . . . .	222
6.6	Voltammetric Particle Sizing . . . . .	224
6.7	Scanning Electrochemical Microscopy (SECM) . . . . .	228
<b>7</b>	<b>Cyclic Voltammetry: Coupled Homogeneous Kinetics and Adsorption</b>	<b>233</b>
7.1	Homogeneous Coupled Reactions: Notation and Examples . . .	233
7.2	Modifying Fick's Second Law to Allow for Chemical Reaction . .	235
7.3	Cyclic Voltammetry and the EC Reaction . . . . .	236
7.4	How Do The Parameters $K_1$ and $\Lambda$ Emerge? . . . . .	240
7.5	Cyclic Voltammetry and the $EC_2$ Reaction . . . . .	243
7.6	Examples of EC and $EC_2$ Processes . . . . .	246
7.7	ECE Processes . . . . .	254
7.8	ECE vs DISP . . . . .	262
7.9	The CE Mechanism . . . . .	264
7.10	The $EC'$ (Catalytic) Mechanism . . . . .	266
7.11	Adsorption . . . . .	268
7.12	Voltammetric Studies of Droplets and Solid Particles . . . . .	277

<b>8</b>	<b>Hydrodynamic Electrodes</b>	<b>285</b>
8.1	Convection . . . . .	285
8.2	Modifying Fick's Law to Allow for Convection . . . . .	287
8.3	The Rotating Disc Electrode: An Introduction . . . . .	288
8.4	The Rotating Disc Electrode — Theory . . . . .	289
8.5	Osborne Reynolds (1842–1912) . . . . .	293
8.6	The Rotating Disc Electrode — Further Theory . . . . .	293
8.7	Chronoamperometry at the Rotating Disc Electrode: An Illustration of the Value of Simulation . . . . .	300
8.8	The Rotating Disc and Coupled Homogeneous Kinetics . . . . .	303
8.9	The Channel Electrode: An Introduction . . . . .	306
8.10	The Channel Electrode: The Levich Equation Derived . . . . .	309
8.11	Channel Flow Cells and Coupled Homogeneous Kinetics . . . . .	310
8.12	Chronoamperometry at the Channel Electrode . . . . .	316
8.13	The Channel Electrode is not “Uniformly Accessible” . . . . .	318
8.14	Channel Microelectrodes . . . . .	319
8.15	Channel Microband Electrode Arrays for Mechanistic Electrochemistry . . . . .	321
8.16	The High Speed Channel Electrode . . . . .	325
8.17	Hydrodynamic Electrodes Based on Impinging jets . . . . .	327
8.18	Sonovoltammetry . . . . .	329
<b>9</b>	<b>Voltammetry for Electroanalysis</b>	<b>341</b>
9.1	Potential Step Voltammetric Techniques . . . . .	341
9.2	Differential Pulse Voltammetry . . . . .	342
9.3	Square Wave Voltammetry . . . . .	344
9.4	Stripping Voltammetry . . . . .	345
9.5	Sono-electroanalysis . . . . .	352
	<b>Appendix Simulation of Electrode Processes</b>	<b>361</b>
A.1	Fick's First and Second Laws . . . . .	361
A.2	Boundary Conditions . . . . .	362
A.3	Finite Difference Equations . . . . .	362
A.4	Backward Implicit Method . . . . .	363
A.5	Conclusion . . . . .	365
	<b>Index</b>	<b>367</b>
