<i>Preface</i>	vii
1. Introduction	1
1.1 Formal Derivation of Amplitude Equations	7
1.1.1 Cubic Nonlinearities	8
1.1.2 Other Types of Nonlinearities	10
1.1.3 Quadratic Nonlinearities	11
1.1.4 Large or Unbounded Domains	13
1.2 General Structure of the Approach	17
1.2.1 Meta Theorems	19
1.3 Examples of Equations	21
2. Amplitude Equations on Bounded Domains	25
2.1 Multiplicative Noise (Parameter Noise)	26
2.2 Assumptions and Results — The Cubic Case	28
2.2.1 Attractivity	32
2.2.2 Residual	33
2.2.3 Approximation	34
2.3 A priori Estimates for u	37
2.4 Results for Quadratic Nonlinearities	41
2.4.1 Attractivity	44
2.4.2 Residual	45
2.4.3 Approximation	47
2.4.4 Proofs	47
2.5 Setting for Additive Noise (Thermal Noise)	55
2.5.1 Assumptions	56
2.5.2 Existence of Solutions	58
2.5.3 Amplitude Equations — Main Results	59
2.5.3.1 Attractivity	59

2.5.3.2	Approximation	60
2.6	Quadratic Nonlinearities	62
3.	Applications — Some Examples	67
3.1	Approximation of Invariant Measures	69
3.1.1	The Results	72
3.2	Pattern Formation Below Criticality	75
3.2.1	Additive Noise	75
3.2.2	Multiplicative Noise	79
3.3	Approximative Centre Manifold	80
3.3.1	Random Fixed Points	83
3.3.2	Random Set Attractors	84
4.	Amplitude Equations on Large Domains	89
4.1	Introduction	89
4.2	Setting	90
4.3	Approximation of the Stochastic Convolution	93
4.3.1	Noise	94
4.3.2	Main Result	95
4.3.3	Remarks	96
4.3.4	The General Result	97
4.4	Nonlinear Result	100
Appendix A	Basic Inequalities	103
A.	Basic Inequalities	103
A.1	Burkholder-Davis-Gundy Inequality	104
A.2	Comparison Argument for ODEs	106
Appendix B	Bounds for SDEs	109
B.	Bounds for SDEs	109
B.1	Large Deviation Estimate	109
B.2	Moment Inequalities	111
B.2.1	Negative Moments	113
