<i>Preface</i>	vii
1. The Standard Model of Electroweak Interactions	1
1.1 Weak interactions in the original Fermi approach	1
1.2 Weak interactions and the intermediate vector bosons	6
1.3 The Higgs mechanism in the local $SU(2)$ gauge symmetry case	9
1.4 Unification of weak and electromagnetic interactions in the Standard Model	16
1.4.1 The $SU(2) \times U(1)$ description of electroweak interactions	16
1.4.2 Gauge boson masses in the $SU(2)_L \times U(1)_{Y_L}$ scheme	20
1.4.3 The (W, Z) mass relationship and the ρ_0 parameter	24
1.4.4 Electroweak unification and weak neutral currents	26
1.4.5 Numerical prediction for the gauge boson masses in the Minimal Standard Model	32
1.5 Z physics as a test of the MSM	34
1.5.1 The Higgs scalar mass in the MSM	37
1.5.2 A more complete formulation of the MSM	38
1.5.3 Tests of the MSM at LEP1/SLC	48
1.5.4 Universality of weak interactions and number of fermion families	51

2.	Z Physics at Tree Level	57
2.1	Conventions, spinors and basic cross sections	58
2.2	Chiral fermions and polarized cross sections in the one-photon exchange	61
2.3	Interaction involving a Z boson	66
2.4	Computation of Z partial widths	69
2.5	Angular and polarization asymmetries	71
2.6	Asymmetries in the vicinity of the Z pole	74
3.	Z Physics at One Loop for Final Leptonic States	77
3.1	Definition of <i>physical</i> input parameters and removal of infinities at one loop in e^+e^- annihilation on Z resonance	84
3.1.1	The theoretical description at tree level	84
3.1.2	Renormalizability and gauge transformations in the MSM	87
3.1.3	Treatment of formally divergent quantities in e^+e^- annihilation: the divergences at one loop	93
3.1.4	The dimensional regularization method	99
3.1.5	Definition of <i>physical</i> parameters: renormalization of m_W, m_Z	103
3.1.6	Charge renormalization and definition in the MSM	109
3.1.7	The ‘running’ of α_{QED} in the MSM	126
3.2	Theoretical description of the Z physics observables at one loop in the MSM	132
3.2.1	Choice of the most convenient input parameters: definition of the physical G_F	132
3.2.2	Derivation of Sirlin’s equation: introduction and definition of the fundamental parameter Δr	139
3.2.3	Calculation of $\Delta r^{(f)}$: identification of four classes of physical effects	143
3.2.4	Numerical estimate of $\Delta\alpha(m_Z^2)^{(f)}$	147
3.2.5	Determination of Δr^W and calculation of the W mass	152
3.3	Formulation of Z physics at one loop: introduction of the <i>effective</i> weak parameter $\sin^2\theta_{W,eff}$	158

3.3.1	Operative definition of the electroweak mixing angle: the longitudinal polarization asymmetry	158
3.3.2	Calculation of $\sin^2 \theta_{W,eff}$ at one loop: fermion pairs contributions to self-energies	162
3.3.3	Relationship between $\sin^2 \theta_{W,eff}^{(f)}$ and m_Z	168
3.3.4	The Z leptonic width at one loop in the ‘fermion pairs’ approximation	169
3.4	The complete expression of $\sin^2 \theta_{W,eff}$ at one loop	173
3.4.1	A gauge-invariant classification of one-loop effects	176
3.4.2	Operative definition of $\sin^2 \theta_{W,eff}$: the leptonic asymmetries at the Z peak	185
3.5	A two-parameters description of Z physics for final leptonic states	188
3.5.1	Complete expression of the Z leptonic width at one-loop	188
3.5.2	The Z peak leptonic observables in terms of the ϵ_1, ϵ_3 parameters	193
3.5.3	Dependence of the weak parameters ϵ_1, ϵ_3 on the Higgs mass	197
3.5.4	The ϵ_2 parameter and the complete expression of the W mass	199
4.	Z Physics at One Loop for Final Hadronic States	203
4.1	The rôle of the $Zb\bar{b}$ vertex in Z physics	204
4.1.1	Calculation of the electroweak component of the $Zb\bar{b}$ vertex	205
4.1.2	Observable effects of the $Zb\bar{b}$ vertex at the Z peak: the large m_t limit	216
4.1.3	Operative definition of the $Zb\bar{b}$ vertex at the Z peak: the δ_{bV} parameter	220
4.2	The rôle of strong interactions in Z physics	227
4.2.1	Strong interactions effects at the Z peak	227
4.2.2	Higher order strong coupling contributions	231
5.	Accelerators and Detectors for Z and W Physics	237
5.1	LEP	237
5.2	SLC	238

5.3	Tevatron	239
5.4	Beyond LEP, SLC and Tevatron: next colliders	241
5.5	Detectors	242
6.	The Z Lineshape	251
6.1	Initial state radiation in e^+e^- collisions	252
6.2	The reduced cross sections	253
6.3	Luminosity	255
6.4	Centre-of-mass energy calibration in e^+e^- collisions	258
6.5	Selection of hadronic and leptonic Z decays	264
6.6	Measuring the Z lineshape parameters	266
7.	Z Decays to Heavy Quarks	273
7.1	General properties of hadronic events at the Z	274
7.2	Tagging Z decays to b and c quarks	276
7.2.1	Lepton tagging	276
7.2.2	Lifetime tagging	282
7.2.3	Reconstruction of charmed hadrons	293
7.2.4	Event shape tagging	297
7.2.5	Gluon splitting to heavy quarks	298
7.3	R_b measurements	299
7.3.1	The single/double tag method	300
7.3.2	Multi-tag methods	304
7.3.3	R_b results	304
7.4	R_c measurements	305
7.4.1	Single/double tag	305
7.4.2	Inclusive/exclusive tag	306
7.4.3	Lepton analyses	306
7.4.4	Charm counting	307
7.4.5	R_c^0 results	308
8.	Asymmetries at the Z pole	309
8.1	Measurement of the left-right asymmetry (A_{LR})	310
8.2	Measurement of the tau polarization in Z decays	314
8.3	Forward-backward asymmetries	322
8.3.1	Lepton forward-backward asymmetries	326
8.3.2	Heavy quark asymmetries	328
8.4	Interpretations	339

8.4.1	The determinations of $\sin^2 \theta_{W,eff}$	339
8.4.2	Extraction of the neutral current couplings	339
9.	Electroweak Measurements with W Bosons	345
9.1	W mass measurement at hadron colliders	346
9.2	W production in e^+e^- collisions	350
9.3	W mass measurement in e^+e^- collisions	356
9.4	Triple gauge couplings	362
9.4.1	The $e^+e^- \rightarrow W^+W^-$ angular analysis and the W polarization	364
9.4.2	The effective TGC lagrangian and the couplings	367
10.	The Top Quark and Its Mass	371
10.1	Top-quark properties	371
10.2	Direct measurement of the top mass	373
10.3	Electroweak constraints on the top mass	379
11.	The Search for the Higgs Boson and Tests of the Electroweak Interaction	383
11.1	Search for the Higgs boson before LEP	384
11.2	Higgs production at LEP	386
11.3	Searching the Higgs at LEP1	386
11.4	Setting confidence levels	388
11.5	Higgs searches at LEP2	391
11.6	The Higgs mass from electroweak fits	393
11.7	Model independent analysis of electroweak data	395
12.	Conclusions and Perspectives	403
	<i>Bibliography</i>	409
	<i>Index</i>	417
