List of Abbreviations	xiii
Preface	xv
1 Introduction	1
1.1 A Brief History of Temperature and Entropy	1
1.2 The Association of Entropy with Disorder	9
1.3 The Association of Entropy with Missing Information	19
2 Elements of Probability Theory	33
2.1 Introduction	33
2.2 The Axiomatic Approach	36
2.2.1 The sample space, denoted Ω	36
2.2.2 The field of events, denoted F	37
2.2.3 The probability function, denoted P	39
2.3 The Classical Definition	43
2.4 The Relative Frequency Definition	45
2.5 Independent Events and Conditional Probability	50
2.5.1 Conditional probability and subjective probability	58
2.5.2 Conditional probability and cause and effect	62

2.5.3	Conditional probability and probability of joint events	64
2.6	Bayes' Theorem	65
2.6.1	A challenging problem	72
2.6.2	A more challenging problem: The three prisoners' problem	74
2.7	Random Variables, Average, Variance and Correlation	76
2.8	Some Specific Distributions	86
2.8.1	The binomial distribution	86
2.8.2	The normal distribution	90
2.8.3	The Poisson distribution	93
2.9	Generating Functions	94
2.10	The Law of Large Numbers	100
3	Elements of Information Theory	103
3.1	A Qualitative Introduction to Information Theory	104
3.2	Definition of Shannon's Information and Its Properties	110
3.2.1	Properties of the function H for the simplest case of two outcomes	112
3.2.2	Properties of H for the general case of n outcomes	114
3.2.3	The consistency property of the missing information (MI)	125
3.2.4	The case of an infinite number of outcomes	130
3.3	The Various Interpretations of the Quantity H	138
3.4	The Assignment of Probabilities by the Maximum Uncertainty Principle	144
3.5	The Missing Information and the Average Number of Binary Questions Needed to Acquire It	149
3.6	The False Positive Problem, Revisited	170
3.7	The Urn Problem, Revisited	172
4	Transition from the General MI to the Thermodynamic MI	177
4.1	MI in Binding Systems: One Kind of Information	178
4.1.1	One ligand on M sites	179
4.1.2	Two <i>different</i> ligands on M sites	179

4.1.3	Two <i>identical</i> ligands on M sites	182
4.1.4	Generalization to N ligands on M sites	183
4.2	Some Simple Processes in Binding Systems	186
4.2.1	The analog of the expansion process	187
4.2.2	A pure deassimilation process	190
4.2.3	Mixing process in a binding system	194
4.2.4	The dependence of MI on the characterization of the system	196
4.3	MI in an Ideal Gas System: Two Kinds of Information. The Sackur–Tetrode Equation	201
4.3.1	The locational MI	201
4.3.2	The momentum MI	204
4.3.3	Combining the locational and the momentum MI	205
4.4	Comments	207
5	The Structure of the Foundations of Statistical Thermodynamics	211
5.1	The Isolated System; The Micro-Canonical Ensemble	213
5.2	System in a Constant Temperature; The Canonical Ensemble	220
5.3	The Classical Analog of the Canonical Partition Function	228
5.4	The Re-interpretation of the Sackur–Tetrode Expression from Informational Considerations	232
5.5	Identifying the Parameter β for an Ideal Gas	235
5.6	Systems at Constant Temperature and Chemical Potential; The Grand Canonical Ensemble	236
5.7	Systems at Constant Temperature and Pressure; The Isothermal Isobaric Ensemble	242
5.8	The Mutual Information due to Intermolecular Interactions	244
6	Some Simple Applications	251
6.1	Expansion of an Ideal Gas	252
6.2	Pure, Reversible Mixing; The First Illusion	255

6.3	Pure Assimilation Process; The Second Illusion	257
6.3.1	Fermi–Dirac (FD) statistics; Fermions	259
6.3.2	Bose–Einstein (BE) statistics; Bosons	260
6.3.3	Maxwell–Boltzmann (MB) statistics	261
6.4	Irreversible Process of Mixing Coupled with Expansion	265
6.5	Irreversible Process of Demixing Coupled with Expansion	268
6.6	Reversible Assimilation Coupled with Expansion	270
6.7	Reflections on the Processes of Mixing and Assimilation	272
6.8	A Pure Spontaneous Deassimilation Process	284
6.9	A Process Involving only Change in the Momentum Distribution	287
6.10	A Process Involving Change in the Intermolecular Interaction Energy	290
6.11	Some Baffling Experiments	293
6.12	The Second Law of Thermodynamics	298
Appendices		317
A	Newton’s binomial theorem and some useful identities involving binomial coefficients	317
B	The total number of states in the Fermi–Dirac and the Bose–Einstein statistics	319
C	Pair and triplet independence between events	321
D	Proof of the inequality $ R(X, Y) \leq 1$ for the correlation coefficient	322
E	The Stirling approximation	326
F	Proof of the form of the function H	327
G	The method of Lagrange undetermined multipliers	331
H	Some inequalities for concave functions	334
I	The MI for the continuous case	340
J	Identical and indistinguishable (ID) particles	343
K	The equivalence of the Boltzmann’s and Jaynes’ procedures to obtain the fundamental distribution of the canonical ensemble	350

L	An alternative derivation of the Sackur–Tetrode equation	352
M	Labeling and un-labeling of particles	355
N	Replacing a sum by its maximal term	356
O	The Gibbs paradox (GP)	360
P	The solution to the three prisoners' problem	363
