|--|-----|
| <i>Preface</i>   | vii |
| <i>List of Symbols</i>   | ix  |
| 1. Modeling uncertain outcomes                                   | 1   |
| 1.1 The three M's of decision making under uncertainty . . . . . | 1   |
| 1.2 Probability models and scenario distributions . . . . .      | 4   |
| 1.2.1 Distribution functions and quantile functions . . . . .    | 6   |
| 1.2.2 Joint distributions and couplings . . . . .                | 8   |
| 1.2.3 Utility functions and order relations . . . . .            | 12  |
| 1.2.4 Compounding . . . . .                                      | 20  |
| 1.3 Standard statistical parameters . . . . .                    | 21  |
| 1.3.1 Location parameters . . . . .                              | 21  |
| 1.3.2 Dispersion parameters . . . . .                            | 22  |
| 1.3.3 Correlation parameters . . . . .                           | 24  |

|       |  |     |
|-------|--|-----|
| 2.    | Measuring single-period risk   | 27  |
| 2.1   | Probability functionals and their properties . . . . .               | 27  |
| 2.1.1 | Properties of probability functionals . . . . .                      | 29  |
| 2.1.2 | Version-independent properties of probability functionals . . . . .  | 31  |
| 2.2   | Acceptability functionals and deviation risk functionals .           | 35  |
| 2.2.1 | Acceptance sets for translation-equivariant functionals . . . . .    | 39  |
| 2.2.2 | Dual representations of concave and convex functionals . . . . .     | 41  |
| 2.2.3 | The average value-at-risk . . . . .                                  | 48  |
| 2.2.4 | Kusuoka representations . . . . .                                    | 58  |
| 2.3   | Conditional acceptability and risk mappings . . . . .                | 66  |
| 2.3.1 | Version independent conditional acceptability mappings . . . . .     | 73  |
| 2.3.2 | More about the conditional average value-at-risk .                   | 75  |
| 2.4   | Classes of version-independent acceptability-type functionals        | 77  |
| 2.4.1 | Expected utility . . . . .   | 78  |
| 2.4.2 | Distortion functionals . . . . .                                     | 80  |
| 2.4.3 | Sup-convolutions . . . . .   | 88  |
| 2.4.4 | Single-period polyhedral acceptability functionals                   | 91  |
| 2.4.5 | Risk-corrected expectation and mean-risk models                      | 93  |
| 2.5   | Classes of version-independent deviation-type functionals            | 94  |
| 2.5.1 | Deviation functionals of the form $\mathbb{E}[h(Y - \mathbb{E}Y)]$ . | 95  |
| 2.5.2 | Deviation functionals of the form $\ Y - \mathbb{E}Y\ _h$ . .        | 99  |
| 2.5.3 | Deviation functionals of the form $\ [Y - \mathbb{E}Y]^{-}\ _h$      | 102 |
| 2.5.4 | Deviation functionals of the form $\mathbb{E}[h(Y - Y')]$ .          | 106 |
| 2.5.5 | Minimal loss risk functionals . . . . .                              | 107 |
| 2.6   | Summary . . . . .  | 112 |

|       |   |     |
|-------|---|-----|
| 3.    | Measuring multi-period risk   | 115 |
| 3.1   | Introduction to multi-period models . . . . .                                     | 115 |
| 3.1.1 | Evolving information: filtrations and tree processes . . . . .                    | 119 |
| 3.1.2 | Dynamic acceptability functionals . . . . .                                       | 124 |
| 3.1.3 | Introducing information into single-period functionals . . . . .                  | 126 |
| 3.2   | Multi-period risk functionals: basic properties . . . . .                         | 132 |
| 3.2.1 | Dual representations of multi-period acceptability functionals . . . . .          | 136 |
| 3.2.2 | Version-independent multi-period risk functionals                                 | 140 |
| 3.3   | Classes of multi-period acceptability functionals . . . . .                       | 144 |
| 3.3.1 | Separable functionals . . . . .   | 144 |
| 3.3.2 | Risk functionals of the value-of-information type .                               | 146 |
| 3.3.3 | More about the multi-period average value-at-risk                                 | 150 |
| 3.3.4 | Composition of conditional acceptability mappings                                 | 154 |
| 3.3.5 | Polyhedral multi-period acceptability functionals .                               | 159 |
| 3.3.6 | Polyhedral acceptability functionals in multi-stage stochastic programs . . . . . | 169 |
| 3.4   | Summary . . . . .   | 172 |
| 4.    | Single-stage decision models  | 175 |
| 4.1   | Stochastic optimization . . . . .   | 175 |
| 4.2   | Efficient frontiers . . . . .   | 179 |
| 4.2.1 | Simple deviation risk models . . . . .  | 183 |
| 4.2.2 | Discrete models . . . . .   | 187 |
| 4.2.3 | Standard deviation efficiency . . . . .   | 188 |

|       |  |     |
|-------|--|-----|
| 4.2.4 | Lower standard deviation efficiency . . . . .  | 196 |
| 4.2.5 | Mean absolute deviation efficiency . . . . .   | 198 |
| 4.2.6 | Average value-at-risk deviation efficiency . . . . .                                   | 198 |
| 4.2.7 | Value-at-risk deviation efficiency . . . . .   | 200 |
| 4.2.8 | Minimal loss efficiency . . . . .  | 201 |
| 4.2.9 | Distortion efficiency . . . . .  | 202 |
| 4.3   | Risk contributions . . . . .   | 205 |
| 5.    | Multi-stage decision models for financial management                                   | 211 |
| 5.1   | Multi-stage decisions . . . . .  | 211 |
| 5.1.1 | Tree models . . . . .  | 216 |
| 5.1.2 | A typical multi-stage financial optimization<br>problem . . . . .                      | 217 |
| 5.2   | Value-of-information: standard and clairvoyant problems .                              | 221 |
| 5.2.1 | Acceptability and value-of-information processes .                                     | 223 |
| 5.2.2 | An example for a value-of-information process . .                                      | 224 |
| 5.3   | Efficient frontiers in multi-stage portfolio optimization . .                          | 229 |
| 5.4   | A multi-stage insurance model . . . . .  | 233 |
| 6.    | Multi-stage decision models for electricity management                                 | 245 |
| 6.1   | Introduction . . . . .   | 245 |
| 6.2   | Case study: Mean-risk portfolio optimization of a municipal<br>power utility . . . . . | 247 |
| 6.2.1 | Optimization model . . . . .   | 251 |
| 6.2.2 | Objective and multi-period polyhedral acceptability<br>functionals . . . . .           | 258 |
| 6.2.3 | Simulation results . . . . .   | 260 |
| 6.3   | Conclusions . . . . .  | 263 |

|   |     |
