Preface	v
1. Introduction	1
2. Wavelet Analysis	13
2.1 Wavelet and Wavelet Analysis. Preliminary Notion	13
2.1.1 The space $L^2(\mathbb{R})$	15
2.1.2 The spaces $L^p(\mathbb{R})$ ($p \geq 1$)	16
2.1.3 The Hardy spaces $H^p(\mathbb{R})$ ($p \geq 1$)	17
2.1.4 The sketch scheme of wavelet analysis	18
2.2 Rademacher, Walsh and Haar Functions	26
2.2.1 System of Rademacher functions	26
2.2.2 System of Walsh functions	28
2.2.3 System of Haar functions	32
2.3 Integral Fourier Transform. Heisenberg Uncertainty Principle	44
2.4 Window Transform. Resolution	52
2.4.1 Examples of window functions	54
2.4.2 Properties of the window Fourier transform	57
2.4.3 Discretization and discrete window Fourier transform	59
2.5 Bases. Orthogonal Bases. Biorthogonal Bases	63
2.6 Frames. Conditional and Unconditional Bases	71
2.6.1 Wojtaszczyk's definition of unconditional basis (1997)	81
2.6.2 Meyer's definition of unconditional basis (1997)	82
2.6.3 Donoho's definition of unconditional basis (1993)	82
2.6.4 Definition of conditional basis	82

2.7	Multiresolution Analysis	83
2.8	Decomposition of the Space $L^2(\mathbb{R})$	95
2.9	Discrete Wavelet Transform. Analysis and Synthesis	109
2.9.1	Analysis: transition from the fine scale to the coarse scale	111
2.9.2	Synthesis: transition from the coarse scale to the fine scale	113
2.10	Wavelet Families	116
2.10.1	Haar wavelet	117
2.10.2	Strömberg wavelet	120
2.10.3	Gabor wavelet	123
2.10.4	Daubechies-Jaffard-Journé wavelet	123
2.10.5	Gabor-Malvar wavelet	124
2.10.6	Daubechies wavelet	125
2.10.7	Grossmann-Morlet wavelet	126
2.10.8	Mexican hat wavelet	127
2.10.9	Coifman wavelet – coiflet	128
2.10.10	Malvar-Meyer-Coifman wavelet	130
2.10.11	Shannon wavelet or sinc-wavelet	130
2.10.12	Cohen-Daubechies-Feauveau wavelet	131
2.10.13	Geronimo-Hardin-Massopust wavelet	132
2.10.14	Battle-Lemarié wavelet	133
2.11	Integral Wavelet Transform	137
2.11.1	Definition of the wavelet transform	137
2.11.2	Fourier transform of the wavelet	138
2.11.3	The property of resolution	139
2.11.4	Complex-value wavelets and their properties	141
2.11.5	The main properties of wavelet transform	141
2.11.6	Discretization of the wavelet transform	142
2.11.7	Orthogonal wavelets	143
2.11.8	Dyadic wavelets and dyadic wavelet transform	144
2.11.9	Equation of the function (signal) energy balance	144
3.	Materials with Micro- or Nanostructure	147
3.1	Macro-, Meso-, Micro-, and Nanomechanics	147
3.2	Main Physical Properties of Materials	156
3.3	Thermodynamical Theory of Material Continua	160
3.4	Composite Materials	168
3.5	Classical Model of Macroscopic (Effective) Moduli	174

3.6 Other Microstructural Models	181
3.6.1 Bolotin model of energy continualization	182
3.6.2 Achenbach-Hermann model of effective stiffness.....	183
3.6.3 Models of effective stiffness of high orders	184
3.6.4 Asymptotic models of high orders.....	185
3.6.5 Drumheller-Bedford lattice microstructural models	186
3.6.6 Mindlin microstructural theory	187
3.6.7 Eringen microstructural model. Eringen-Maugin model	188
3.6.8 Pobedrya microstructural theory.....	190
3.7 Structural Model of Elastic Mixtures	191
3.7.1 Viscoelastic mixtures.....	210
3.7.2 Piezoelectric mixtures	213
3.8 Computer Modelling Data on Micro- and Nanocomposites	216
4. Waves in Materials	229
4.1 Waves Around the World.....	229
4.2 Analysis of Waves in Linearly Deformed Elastic Materials	232
4.2.1 Volume and shear elastic waves in the classical approach	232
4.2.2 Plane elastic harmonic waves in the classical approach	237
4.2.3 Cylindrical elastic waves in the classical approach	241
4.2.4 Volume and shear elastic waves in the nonclassical approach.....	244
4.2.5 Plane elastic harmonic waves in the nonclassical approach	247
4.3 Analysis of Waves in Nonlinearly Deformed Elastic Materials	253
4.3.1 Basic notions of the nonlinear theory of elasticity. Strains.....	253
4.3.2 Forces and stresses.....	260
4.3.3 Balance equations	262
4.3.4 Nonlinear elastic isotropic materials. Elastic Potentials	267
4.4 Nonlinear Wave Equations	276
4.4.1 Nonlinear wave equations for plane waves. Methods of solving.....	276
4.4.1.1 Method of successive approximations	281
4.4.1.2 Method of slowly varying amplitudes	283
4.4.2 Nonlinear wave equations for cylindrical waves	285
4.5 Comparison of Murnaghan and Signorini Approaches	308
4.5.1 Comparison of some results for plane waves	308

4.5.2 Comparison of cylindrical and plane wave in the Murnaghan model	322
5. Simple and Solitary Waves in Materials	337
5.1 Simple (Riemann) Waves	337
5.1.1 Simple waves in nonlinear acoustics	337
5.1.2 Simple waves in fluids.....	340
5.1.3 Simple waves in the general theory of waves.....	344
5.1.4 Simple waves in mechanics of electromagnetic continua.....	345
5.2 Solitary Elastic Waves in Composite Materials	346
5.2.1 Simple solitary waves in materials	346
5.2.2 Chebyshev-Hermite functions	347
5.2.3 Whittaker functions	349
5.2.4 Mathieu functions	352
5.2.5 Interaction of simple waves. Self-generation.....	353
5.2.6 The solitary wave analysis.....	359
5.3 New Hierarchy of Elastic Waves in Materials.....	373
5.3.1 Classical harmonic waves (periodic, nondispersive).....	374
5.3.2 Classical arbitrary elastic waves (D'Alembert waves)	374
5.3.3 Classical harmonic elastic waves (periodic, dispersive).....	375
5.3.4 Nonperiodic elastic solitary waves (with the phase velocity depending on the phase)	377
5.3.5 Simple elastic waves (with the phase velocity depending on the amplitude).....	379
6. Solitary Waves and Elastic Wavelets	381
6.1 Elastic Wavelets	381
6.2 The Link between the Trough Length and the Characteristic Length	391
6.3 Initial Profiles as Chebyshev-Hermite and Whittaker Functions.....	396
6.4 Some Features of the Elastic Wavelets.....	410
6.5 Solitary Waves in Mechanical Experiments.....	422
6.6 Ability of Wavelets in Detecting the Profile Features	435
Bibliography	443
Index.....	455
