<i>Preface</i>	vii
1. Formulation and Examples	1
1.1 Formulation and Classification of Partitions	2
1.2 Formulation and Classification of Partition Problems over Parameter Spaces	5
1.3 Counting Partitions	13
1.4 Examples	18
1.4.1 Assembly of systems	18
1.4.2 Group testing	19
1.4.3 Circuit card library	20
1.4.4 Clustering	21
1.4.5 Abstraction of finite state machines	22
1.4.6 Multischeduling	24
1.4.7 Cache assignment	24
1.4.8 The blood analyzer problem	25
1.4.9 Joint replenishment of inventory	26
1.4.10 Statistical hypothesis testing	27
1.4.11 Nearest neighbor assignment	28
1.4.12 Graph partitions	29
1.4.13 Traveling salesman problem	30
1.4.14 Vehicle routing	30
1.4.15 Division of property	31
1.4.16 The consolidation of farm land	31
2. Sum-Partition Problems over Single-Parameter Spaces: Explicit Solutions	33

2.1	Bounded-Shape Problems with Linear Objective	34
2.2	Constrained-Shape Problems with Schur Convex Objective	45
2.3	Constrained-Shape Problems with Schur Concave Objective: Uniform (over f) Solution	59
3.	Extreme Points and Optimality	75
3.1	Preliminaries	76
3.2	Partition Polytopes	88
3.3	Optimality of Extreme Points	91
3.4	Asymmetric Schur Convexity	99
3.5	Enumerating Vertices of Polytopes Using Restricted Edge-Directions	105
3.6	Edge-Directions of Polyhedra in Standard Form	112
3.7	Edge-Directions of Network Polyhedra	118
4.	Permutation Polytopes	125
4.1	Permutation Polytopes with Respect to Supermodular Functions – Statement of Results	126
4.2	Permutation Polytopes with Respect to Supermodular Functions – Proofs	136
4.3	Permutation Polytopes Corresponding to Strictly Supermodular Functions	146
4.4	Permutation Polytopes Corresponding to Strongly Supermodular Functions	151
5.	Sum-Partition Problems over Single-Parameter Spaces: Polyhedral Approach	161
5.1	Single-Shape Partition Polytopes	162
5.2	Constrained-Shape Partition Polytopes	177
5.3	Supermodularity for Bounded-Shape Sets of Partitions	208
5.4	Partition Problems with Asymmetric Schur Convex Objective: Optimization over Partition Polytopes	214
6.	Partitions over Single-Parameter Spaces: Combinatorial Structure	229
6.1	Properties of Partitions	230
6.2	Enumerating Classes of Partitions	236
6.3	Local Invariance and Local Sortability	252

6.4	Localizing Partition Properties: Heredity, Consistency and Sortability	261
6.5	Consistency and Sortability of Particular Partition-Properties	271
6.6	Extensions	289
7.	Partition Problems over Single-Parameter Spaces: Combinatorial Approach	293
7.1	Applying Sortability to Optimization	295
7.2	Partition Problems with Convex and Schur Convex Objective Functions	298
7.3	Partition Problems with Objective Functions Depending on Part-Sizes	310
7.4	Clustering Problems	326
7.5	Other Problems	337
	<i>Bibliography</i>	341
	<i>Index</i>	347
