

CONTENTS

Preface	v
Introduction to the 14 th Symposium	ix
PART 1. LUCIFERASES	
Refolding of the recombinant luciferases of <i>Metridia longa</i> <i>Borisova VV, Frank LA, Markova SV, Golz S and Vysotski ES</i>	3
The main function of HIS175, TRP179, and TYR190 residues of the obelin binding site is to stabilize the hydroperoxycoelenterazine intermediate <i>Eremeeva EV, Markova SV, Frank LA and Vysotski ES</i>	7
Mechanistic study on the <i>Cypridina (Vargula)</i> bioluminescence reaction <i>Hirano T, Takahashi Y, Kondo H, Ikeda H, Maki S and Niwa H</i>	11
Stabilization of <i>Luciola mingrelica</i> firefly luciferase by mutation of non-conservative cysteine residues <i>Lomakina GY, Legotsky SA, Tishkov VI and Ugarova NN</i>	15
Firefly luciferase arose from fatty acyl-CoA synthetase by gene duplication and gene recruitment <i>Oba Y and Inouye S</i>	19
Bioluminescence in click beetles (family Elateridae): Molecular phylogenetic analysis, inferred from 28S ribosomal DNA <i>Sagegami-Oba R, Oba Y and Ôhira H</i>	23
Effect of microenvironmental changes on kinetic parameters of steady-state enzyme-induced bacterial bioluminescent reaction <i>Sukovataya IE, Tyulkova NA and Kaykova EV</i>	27
Thermal stability and absorption spectra of bacterial luciferases from <i>Photobacterium leiognathi</i> in water-organic solvents <i>Sukovataya IE, Tyulkova NA and Kaykova EV</i>	31

Characterization of a fish symbiont of <i>Photobacterium phosphoreum</i> with altered spectral properties <i>Whitaker S, Herring PJ, Campbell AK, Hill PJ and Rees CED</i>	35
---	----

PART 2. INSTRUMENTATION

Luminometers for industrial applications of rapid microbiology <i>Berthold F, Hafner K, Schreibers M and Tarkkanen V</i>	41
Application of a luminescence microscope with novel optical system for detection of the gene expression pattern of individual cells <i>Hatta-Ohashi Y, Hayasaka N, Takahasi T, Shigeyoshi Y and Suzuki H</i>	45
Novel tools for quantification of luminescence <i>Hickey PC</i>	49
Luminescence microscope for reporter assay of single live cells <i>Suzuki H, Dosaka S, Ohashi-Hatta Y and Sugiyama T</i>	53

PART 3. ASSAYS

Elevation of choline concentration in cardiac troponin-I positive human plasma <i>Adamczyk M, Brashear RJ and Mattingly PG</i>	59
High throughput detection of hydrogen peroxide: Validation of homogeneous chemiluminescent assays for choline in human plasma and whole blood <i>Adamczyk M, Brashear RJ, Mattingly PG and Tsatsos PH</i>	63
Development of bioluminescent pyrophosphate assay using pyruvate phosphate dikinase and its application to SNPs analysis <i>Arakawa H, Munakata E, Obinata R, Maeda M, Suzuki S, Kamahori M and Kambara H</i>	67
Bioluminescent method for detection of proteinase activity in UHT milk <i>Brovko LY, Hajdok C, Tapp C, Ramsay C, Driscoll M and Griffiths MW</i>	71

Detection and control of <i>Salmonella typhimurium</i> growth using specific bacteriophage	75
<i>Brovko LY, Romanova NA, Allain B, Mandeville R and Griffiths MW</i>	
Improved sensitivity method for rapid hygiene monitoring using ATP bioluminescence	79
<i>Driscoll M, Ramsay C and Watkin J</i>	
Determination of antioxidant capacity and reactivity using hemin-catalyzed luminol chemiluminescence	83
<i>Eckert CR, Esteves CH, Bastos EL, Romoff P and Baader WJ</i>	
Applications of adenylate kinase detection using bioluminescence	87
<i>Foote N, Green M and Gregory S</i>	
Standardization of bioluminescent raw milk quality assay using Lumtek test-systems	91
<i>Frundzhyan VG, Ugarova NN, Makarushin AA and Gavrilov GB</i>	
BART – Bioluminescent alternative to real-time PCR	95
<i>Gandelman O, Church VL, Moore CA, Carne C, Jalal H, Murray JAH and Tisi LC</i>	
Advancing the development of dual-luciferase assays	99
<i>Hawkins EM, Garvin D, Paguio A, Stecha P, Swanson B, Fan F and Wood KV</i>	
Simultaneous bioluminescent immunoassay using aequorin labeled Fab fragment and biotinylated firefly luciferase	103
<i>Ito K, Nishimura W, Maeda M, Gomi K, Inouye S and Arakawa H</i>	
Designing enhanced thermostable luciferase for proteolytic assay	107
<i>Jathoul AP, Gandelman OA, Law GHE, Murray JAH and Tisi LC</i>	
Biosensors for the non-invasive evaluation of bacterial quorum sensing in GI disorders	111
<i>Kumari A, Pasini P, Deo SK, Flomenhoft D, Shashidhar H and Daunert S</i>	
Improved Ca ²⁺ -activated photoproteins for HTS applications	115
<i>Mastroianni N, Flak T and Corazza S</i>	

Development of a multiplexed bioluminescent cell-based assay with the <i>luc</i> gene from <i>Luciola italica</i> for high throughput screening of cholesterol-lowering drugs	119
<i>Michelini E, Southworth TL, Ablamski D, Branchini BR and Roda A</i>	
Novel BRET-based biosensors with a new bioluminescent donor, <i>Gaussia</i> luciferase, for estrogen receptor ligands	123
<i>Michelini E, Magliulo M, Baraldini M and Roda A</i>	
The use of lux genes for monitoring uptake of <i>Pseudomonas aeruginosa</i> by respiratory epithelial cells	127
<i>Robinson GM, Jackson SK, Salisbury VC and Nelson SM</i>	
Bioluminescence characteristics of an Obelin mutant in varying solvent conditions	131
<i>Rowe L, Rothert A, Deo SK, Ensor M and Daunert S</i>	
A simple chemiluminescence flow injection analysis for the determination of sulphide in aqueous samples	135
<i>Satienperakul S, Liawruangrath S and Cardwell TJ</i>	
Using recombinant antigens for the detection of antibodies to <i>Trypanosomas cruzi</i> on a fully automated chemiluminescence analyzer	139
<i>Shah D, Chang C-D, Cheng K, Jiang L, Salbilla V, Haller A and Schochetman G</i>	
Quantitative bioluminescent RNA assay	143
<i>Sun Y, Jacobson KB and Golovlev V</i>	
A novel multi-channel chemiluminescence-immunoassay to detect HIV antibodies as a more specific supplemental test	147
<i>Sun X and Yang X</i>	
Time-resolved measurement of firefly bioluminescence using photolysis of caged-ATP	151
<i>Tanaka M, Igarashi R and Wada N</i>	
Red-chemiluminescent probes for detecting superoxide anions	155
<i>Teranishi K</i>	
Aequorin bioluminescence dissected by random mutagenesis	159
<i>Tricoire L, Tsuzuki K and Lambolez B</i>	

Influence of inorganic sulfur compounds on bioluminescent system NAD(P)H: FMN-oxidoreductase–luciferase <i>Vetrova EV and Prokhorova EV</i>	163
Development of the <i>Cypridina</i> bioluminescent system for high throughput screening assays <i>Wu C, Kawasaki K, Ohgiya S and Ohmiya Y</i>	167
Quantitative Western blotting using a GZ-11 based chemiluminogenic signal reagent <i>Zomer G, Smitsman C, Arts R, Hamzink M and Kooijman M</i>	171
PART 4. OPTICAL IMAGING AND MULTICOLOR ASSAYS	
Demonstration of tri-colored reporter assay using a filter luminometer “Sirius C” <i>Asai T, Berthold A and Ohmiya Y</i>	177
Real-time monitoring of vaccinia virus infection in cultured cells and in living mice using light-emitting proteins <i>Chen N, Yu YA, Zhang Q, Raab V and Szalay AA</i>	181
Use of bioluminescent reporter bacteria to study invasion and survival within mammalian cell lines <i>Cutter KL, Nelson SM, Greenman J, Robinson GM and Salisbury VC</i>	185
Network activities of the cerebral cortex monitored by bioluminescent aequorin imaging <i>Drobac E, Tricoire L and Lambolez B</i>	189
Bivalent fluorescent reporters for gene expression studies in Gram-positive bacteria <i>Gaddipati SR, Perehinec TM, Qazi SNA, Rees CED and Hill PJ</i>	193
Four-color labeling of cell culture and tumors of live mice upon infection with: <i>GFP-Ruc</i> and <i>RFP-CBG99</i> expressing <i>Vaccinia</i> virus strains <i>Raab V, Horbaschek C, Chen N, Zhang Q, Yu YA, Seubert C, Geissinger U, Worschech A, Tietze CJ, Zellner E, Le TH, Grummt F, Stritzker J and Szalay AA</i>	197

Quantitative immunohistochemistry and <i>in situ</i> hybridization with luminescence detection: a new potential diagnostic tool <i>Roda A, Guardigli M, Mirasoli M, Ambretti S, Venturoli S, Musiani M, Casanova S and Roda E</i>	201
Evaluation of an <i>in vivo</i> gene induction system in infected tumor-bearing mice <i>Stritzker J, Weibel S, Hill PJ and Szalay AA</i>	205
Examinations of bacterium-mediated detection of tumors in mice models <i>Yu YA and Szalay AA</i>	209
PART 5. BIOCHEMISTRY/LUMINESCENCE	
Direct observation of a radical-ion intermediate in the chemiexcitation step of peroxyoxalate chemiluminescence <i>Bastos EL, Ciscato LFML, Bartoloni FH and Baader WJ</i>	215
Kinetic observation of the chemiexcitation step in peroxyoxalate chemiluminescence <i>Ciscato LFML, Bartoloni FH and Baader WJ</i>	219
Synthesis and studies of fenchyl-derived 1,2-dioxetanes <i>Ciscato LFML, Weiss D, Flammersheim HJ and Baader WJ</i>	223
Enzyme embedded organic monolith sensor for flow injection — chemiluminescence <i>Nozaki O, Munesue M and Kawamoto H</i>	227
Efficiency of electron-transfer induced chemiexcitation: A comparison of inter- and intramolecular processes <i>Oliveira MA and Baader WJ</i>	231
Study of metal binding to monomeric red fluorescent protein, DsRed-monomer <i>Rahimi Y, Shrestha S and Deo SK</i>	235
Time-dependent spectral change of chemiluminescence from firefly luciferin in deoxygenated dimethyl sulfoxide <i>Shibata R, Yoshida Y and Wada N</i>	239

A quantum-chemical approach to the amino analogs of firefly luciferin <i>Wada N, Fujii H and Sakai H</i>	243
Firefly-luciferin and its analogs: a source of new luminescence dyes and ligands <i>Weiss D, Trupp S, Ciscato LFML, Beckert R and Anders E</i>	247
Chemiluminescence enhancement effect of trace metal elements <i>Yoshiki Y</i>	251
 PART 6. BLCL OCEANS, LAND & SPACE	
Bioluminescence in the spaceflight and life science training program at the Kennedy Space Center <i>Kratasyuk VA, Gusev SM, Rimmel NN, Osipenko OA, Esimbekova EN, Shoeman DM, Dreschel TW, Chetirkin PV, Correll MJ, Bucklin RA and Rygalov VE</i>	257
A comparison of bioluminescence and chlorophyll fields of the world ocean <i>Piontkovski SA, Tokarev YN and Levin LA</i>	261
Brazilian species of bioluminescence fungi <i>Stevani CV, de Oliveira AG, Mendes LF and Domingues O</i>	265
Molecular phylogeny of cypridinid ostracodes and the evolution of bioluminescence <i>Torres E and Gonzalez VL</i>	269
 Index	 273
