

Contents

Chapter 1	Introduction	1
1.1	Motivation: how to get something for nothing	1
1.2	Pythagoras' theorem	3
	References	9
Chapter 2	Numbers and Units in Engineering and Physics	10
2.1	Introduction	10
2.2	Labels	11
2.3	Scales	11
2.4	Measurement with units	12
2.5	Standardized units	13
2.6	Converting from one unit to another	14
2.7	Problems	17
	References	19
Chapter 3	Dimensions, Dimensionless Groups, and Variables	20
3.1	The concept of dimension	20
3.2	Dimensional consistency	22
3.3	Empirical relationships that are not dimensionally consistent	24
3.4	Dimensionless groups	26
3.5	Variables	28
3.6	Problems	30
	References	37
Chapter 4	Dimensional Analysis	38
4.1	Relations between dimensionless groups	38
4.2	Proof of Pi theorem	42
4.3	Revisiting the example of Sec. 4.2, starting from the Pi theorem	46

4.4	Choosing the dimensionless groups and fundamental dimensions in a different way	48
4.5	Resistance of ships	50
4.6	Heat transfer from pipelines	59
4.7	Problems	62
	References	72
Chapter 5 Similarity and Intelligent Experimentation		74
5.1	Similarity	74
5.2	Pressure drops in pipes	75
5.3	Plows in clay	82
5.4	Problems	88
	References	91
Chapter 6 Equations in Nondimensional Form		92
6.1	Motivation	92
6.2	Mass–spring systems	92
6.3	Laying underwater pipelines	101
6.4	Partial differential equations describing fluid flow	106
6.5	Problems	108
	References	110
Chapter 7 Physical Models		112
7.1	Introduction	112
7.2	Structural models	115
7.3	Aerodynamic models	120
7.4	Hydraulic models	123
7.5	Geotechnical models	128
7.6	Problems	130
	References	132
Chapter 8 Solutions to Problems		135
8.1	Introduction	135
8.2	Solutions to problems in Chapter 2	135
8.3	Solutions to problems in Chapter 3	137
8.4	Solutions to problems in Chapter 4	139
8.5	Solutions to problems in Chapter 5	147
8.6	Solutions to problems in Chapter 6	148
8.7	Solutions to problems in Chapter 7	151
	References	154
