| <i>Preface</i> | v |
| 1. A Role of the Melnikov-Type Methods in Applied Sciences | 1 |
| 1.1 Introduction | 1 |
| 1.2 Application of the Melnikov-type methods | 3 |
| 2. Classical Melnikov Approach | 11 |
| 2.1 Introduction | 11 |
| 2.2 Geometric interpretation | 13 |
| 2.3 Melnikov's function | 20 |
| 3. Homoclinic Chaos Criterion in a Rotated Froude Pendulum with Dry Friction | 25 |
| 3.1 Mathematical Model | 25 |
| 3.2 Homoclinic Chaos Criterion | 53 |
| 3.3 Numerical Simulations | 54 |
| 4. Smooth and Nonsmooth Dynamics of a Quasi-Autonomous Oscillator with Coulomb and Viscous Frictions | 57 |
| 4.1 Stick-Slip Oscillator with Periodic Excitation | 57 |
| 4.2 Analysis of the Wandering Trajectories | 59 |
| 4.3 Comparison of Analytical and Numerical Results | 62 |
| 5. Application of the Melnikov-Gruendler Method to Mechanical Systems | 65 |

| | | |
|-----|--|-----|
| 5.1 | Mechanical Systems with Finite Number of Degrees-of-Freedom | 65 |
| 5.2 | 2-DOFs Mechanical Systems | 68 |
| 5.3 | Reduction of the Melnikov-Gruendler Method for 1-DOF Systems | 78 |
| 6. | A Self-Excited Spherical Pendulum | 79 |
| 6.1 | Analytical Prediction of Chaos | 79 |
| 6.2 | Numerical Results | 99 |
| 7. | A Double Self-excited Duffing-type Oscillator | 103 |
| 7.1 | Analytical Prediction of Chaos | 103 |
| 7.2 | Numerical Simulations | 180 |
| 7.3 | Additional Numerical Example | 188 |
| 8. | A Triple Self-Excited Duffing-type Oscillator | 193 |
| 8.1 | Physical and Mathematical Models | 193 |
| 8.2 | Analytical Prediction of Homoclinic Intersections | 194 |
| | <i>Bibliography</i> | 285 |
| | <i>Index</i> | 291 |
