Preface	v
Preface to the Second Edition	vii
Chapter 1 The Independent-Particle Model	1
1.1 Introduction	1
1.2 Bosons	2
1.3 Fermions	3
1.4 Matrix Elements of One-Body Operators	6
1.5 Matrix Elements of Two-Body Operators	8
1.6 Density Matrices	10
1.7 The Ideal Bose Gas Confined in a Harmonic Potential	12
1.8 The Fermi Gas	14
1.8.1 Excited States	19
1.8.2 Polarized Fermi Gas	23
1.8.3 The Fermi Gas in Two Dimensions with Rashba Interaction	24
1.9 Finite Temperature and Quasiparticles	25
Chapter 2 The Hartree–Fock Theory	35
2.1 Introduction	35
2.2 The Hartree–Fock Method for Fermions	36
2.2.1 Examples of Physical Systems Treated by the Hartree–Fock Method	40
2.2.2 Examples of Infinite Systems Treated by the Hartree–Fock Method	51
2.3 The Hartree–Fock Method for Bosons	55
2.4 The Gross–Pitaevskii Equations	56
2.5 Hartree–Fock in Second Quantization Language	58
2.6 Hartree–Fock at Finite Temperature	60
2.7 Hartree–Fock–Bogoliubov and BCS	65
2.8 Appendix: Second Quantization	69

Chapter 3	The Brueckner–Hartree–Fock Theory	76
3.1	Introduction	76
3.2	The Lippman–Schwinger Equation	76
3.3	The Bethe–Goldstone Equation	78
3.4	Examples of Application of the BHF Theory	80
	3.4.1 The One-Dimensional Fermion System	80
	3.4.2 Ultracold Highly Polarized Fermi Gases	81
3.5	Numerical Results of BHF Calculation in Different Systems	84
3.6	The g Matrix for the 2D Electron Gas	86
	3.6.1 Decomposition in Partial Waves	87
	3.6.2 The Separable Approximation	91
	3.6.3 The g Matrix Expansion	95
	3.6.4 Numerical Results and Discussion	98
3.7	The g Matrix for Confined Electron Systems	100
	3.7.1 Effective Interaction in Confined Electron Systems	108
3.8	The BBP Method	110
	3.8.1 Appendix	113
Chapter 4	The Density Functional Theory	116
4.1	Introduction	116
4.2	The Density Functional Formalism	116
4.3	Examples of Application of the Density Functional Theory	118
	4.3.1 The Thomas–Fermi Theory for the Atom	118
	4.3.2 The Gross–Pitaevskii Theory for the Ground State of a Dilute Gas of Bosons	120
	4.3.3 The Thomas–Fermi Approximation for the Fermi Gas Confined in a Harmonic Potential	121
4.4	The Kohn–Sham Equations	125
4.5	The Local Density Approximation for the Exchange–Correlation Energy	127
4.6	The Local Spin Density Approximation (LSDA)	128
4.7	Inclusion of Current Terms in the DFT (CDFT)	131
4.8	The Ensemble Density Functional Theory (EDFT)	134
4.9	The DFT for Strongly Correlated Systems: Nuclei and Helium	135
4.10	The DFT for Mixed Systems	145
4.11	Symmetries and Mean Field Theories	150
Chapter 5	The Confined 2D Electron Gas in a Magnetic Field	159
5.1	Introduction	159
5.2	Quantum Dots in a Magnetic Field	159
	5.2.1 The $\omega_0 \gg \omega_c$ Case	160
	5.2.2 The $\omega_c \gg \omega_0$ Case	161
	5.2.3 The Maximum Density Droplet (MDD) State	163
5.3	The Fractional Regime	165

5.4	The Hall Effect	167
5.5	Elliptical Quantum Dots	169
5.5.1	Analogies with the Bose–Einstein Condensate in a Rotating Trap	173
5.6	The DFT for Quantum Dots in a Magnetic Field	175
5.7	Quantum Wires	189
5.8	The Aharonov–Bohm Effect and Quantum Rings	194
5.9	Quantum Molecules	200
5.9.1	The $B = 0$ Case	201
5.9.2	$B \neq 0$	206
Chapter 6 Spin–Orbit Coupling in the Confined 2D Electron Gas		218
6.1	Spin–Orbit Coupling in Semiconductors	219
6.2	Spin–Orbit Effects on Single-Particle States in Quantum Wells	220
6.2.1	The Case in Which Either $\lambda_R = 0$ or $\lambda_D = 0$	221
6.2.2	The General Case Where $\lambda_R \neq 0$ and $\lambda_D \neq 0$	223
6.3	Single-Particle Level Transitions in Quantum Wells	227
6.4	The Magnetic Field in Plane	230
6.5	Spin–Orbit Effects on Single-Particle States in Quantum Dots	231
6.5.1	Single-Particle Transitions in Dots	237
6.6	Spin–Orbit Effects on Single-Particle States in Quantum Wires	241
6.7	The LSDA with Spin–Orbit Coupling	245
6.8	Comparison with Experiments in Quantum Wells	252
6.9	LSDA Results and Comparison with Experiments for Quantum Dots	256
6.10	LSDA Results for Quantum Wires	271
6.11	Appendix A	280
6.12	Appendix B	281
Chapter 7 Monte Carlo Methods		285
7.1	Introduction	285
7.2	Standard Quadrature Methods	285
7.3	Random Variable Distributions and the Central Limit Theorem	287
7.4	Sampling Techniques	289
7.4.1	The Inversion Rule	289
7.4.2	The Rejection Method	290
7.4.3	Markov Chains	290
7.5	The Metropolis Algorithm [$M(RT)^2$]	294
7.6	Variational Monte Carlo for Liquid ^4He	296
7.7	Variational Monte Carlo for Fermions	298
7.8	Optimization of Variational Wave Functions	301
7.9	Monte Carlo Methods and Quantum Mechanics	304
7.10	Propagation of a State in Imaginary Time	305
7.11	The Schrödinger Equation in Imaginary Time	306

7.12	Importance Sampling	308
7.13	Importance Sampling and Green Functions	311
7.14	Fermion Systems and the Sign Problem	313
7.15	Two Examples of DMC Calculations in Many-Body Systems	316
7.15.1	The Equation of State of Diluted Ultracold Fermi Gases in the BEC–BCS Crossover	316
7.15.2	Many-Nucleon Systems	318
Chapter 8 The Linear Response Function Theory		325
8.1	Introduction	325
8.2	The General Formalism	328
8.3	The Linear Response Function and Sum Rules	332
8.4	Finite Temperature	336
8.5	The Density Response	338
8.6	The Density Response for Noninteracting Homogeneous Systems	342
8.7	The Current Response to an Electromagnetic Field	347
8.8	The Conductivity of Quantum Wires	352
8.9	Magnetoconductivity	360
8.9.1	The Kohn Theorem	360
8.9.2	Magnetoconductivity and the Quantum Hall Effect	363
8.10	The Larmor Theorem	367
8.10.1	Electron Spin Precession with Rashba Spin–Orbit Coupling	367
8.11	Deviations from Kohn and Larmor Theorems Due to Spin–Orbit Coupling	369
8.11.1	Spin–Orbit Splitting of Cyclotron Resonance	369
8.11.2	Spin Splitting of Landau Levels	374
8.12	Spin-Hall Conductivity	375
8.12.1	The Spin-Hall Effect at a Finite Magnetic Field	377
8.12.2	Spin-Hall Conductivity Without SO Coupling	378
8.12.3	Influence of the SO Coupling on the Spin-Hall Conductivity	379
8.13	Hall Conductivity in Graphene	382
Chapter 9 The Linear Response Function in Different Models		387
9.1	The Linear Response Function in Landau Theory	387
9.2	Time Dependent Hartree (TDH) for Homogeneous Systems: The RPA	401
9.3	TDH for the Density Matrix and the Landau Equations	405
9.4	The RPA for the Electron Gas in Different Dimensions: The Plasmon	407
9.5	The RPA for Bosons	413
9.6	The Time-Dependent Gross–Pitaevskii Theory	417
9.7	Time-Dependent Hartree–Fock (TDHF) and the Matrix RPAE	423
9.8	Examples of Application of the RPA Theory	430
9.8.1	The RPA With Separable Interactions	430
9.8.2	The RPAE for Metal Clusters	432

9.9	The Adiabatic Time-Dependent LSDA (TDLSDA)	438
9.9.1	The TDLSDA Longitudinal Response Function	440
9.9.2	The TDLSDA Transverse Response Function	445
9.10	RPA and TDLSDA Commutators and Symmetry Restoration	448
9.11	The Linear Response Based on the Green Functions; RPAE	451
9.12	The Screened Response Function and the Dielectric Constant	454
9.13	Examples of Application of the TDLSDA Theory	456
9.13.1	Quantum Wells Under a Very High External Magnetic Field	456
9.13.2	Quantum Dots Under a Magnetic Field	468
Chapter 10 Dynamic Correlations and the Response Function		491
10.1	Introduction	491
10.2	Interaction Energy and Correlation Energy	491
10.3	The RPA Correlation Energy	494
10.3.1	The RPA Correlation Energy for the Cold and Dilute Gas of Bosons and Fermions	495
10.4	Theories Beyond the <i>RPA</i>	497
10.5	The STLS Theory	500
10.6	Comparison of Different Theories for the Electron Gas in 2D	502
10.7	Quasiparticle Properties	504
10.8	Nonlocal Effects	506
10.9	Mean Energy of Many-Particle Excitations	515
10.10	The Polarization Potential Model	516
10.11	The Gross–Kohn Model	519
10.12	The Method of Lorentz Transforms	523
Chapter 11 The Hydrodynamic and Elastic Models		527
11.1	The Hydrodynamic Model for Bosons	527
11.1.1	Backflow	530
11.1.2	Compression and Surface Modes of Spherical Drops	530
11.1.3	Compression and Surface Modes of a Bose Gas in a Magnetic Trap	534
11.1.4	Compression and Surface Modes of a Superfluid Trapped Fermi Gas	535
11.1.5	The Moment of Inertia and the Scissor Mode of a Bose Gas in a Magnetic Trap	536
11.1.6	Vortices in the Bose Gas in a Magnetic Trap	541
11.2	The Fluidodynamic and Hydrodynamic Model for Fermions	544
11.2.1	Dipolar Modes in Metal Clusters	552
11.2.2	Spin Oscillations in Trapped Fermi Gases	554
11.2.3	The Scalar Quadrupole Mode in Confined Systems	554
11.2.4	The Scissor Mode in Fermi Systems	556

11.2.5	The Moment of Inertia of Quantum Dots	558
11.2.6	The Vibrating Potential Model	562
11.3	The Surface Vibrations of Charged Systems in 2D and 3D	566
11.3.1	Surface Vibrations of Charged Metal Clusters	567
11.3.2	Edge Vibrations of Quantum Dots	569
Index		576
