

Contents

Introduction	v
Chapter 1 Equations of Motion	1
1.0 Newton's Laws	3
1.1 Motion of the Planets about the Sun.....	8
1.2 Halley's Comet near the Sun.....	14
1.3 Voyager at Jupiter.....	17
1.4 Baseball with Air Friction	24
1.5 Follow the Bouncing Ball.....	28
1.6 Sky-Diving with a Parachute	32
1.7 Challenge Problems.....	36
Chapter 2 Vibrations and Waves	39
2.1 Damped and Driven Oscillations	41
2.2 Shock Absorbers	47
2.3 Step Response	54
2.4 Square Wave in an RC Circuit.....	57
2.5 Variable Stars.....	59
2.6 Challenge Problems	62
Chapter 3 Building a Differential Equation	65
3.1 Modeling Dynamic Systems	67
3.2 Track and Field	69
3.3 The Binary Pulsar 1913+16.....	78
3.4 Exploding Star in a Binary System.....	85
3.5 Heat Exchanger.....	90
3.6 Challenge Problems	95

Chapter 4	Partial Differential Equations and Quantum Mechanics	99
4.1	Introduction to Partial DEs	101
4.2	PDE - The Copper Rod	108
4.3	PDE - Heat Conduction in the Earth	111
4.4	Quantum Physics	113
	A Quantum Step.....	114
	B Quantum Barrier	116
	C Quantum Well	118
	D Quantum Oscillator	120
4.5	Hydrogen Atom	125
4.6	Deuterium	136
4.7	Challenge Problems	138
Chapter 5	Applications	141
5.1	Laser Pulse Dynamics	143
5.2	The B-Z Chemical Reaction	145
5.3	Foxes and Rabbits	149
5.4	PDE - Nerve Conduction	152
5.5	Fusion Reactor	161
5.6	Space Shuttle Launch	166
5.7	Challenge Problems	169
Appendices		173
APPENDIX A	Mathematica, Maple, and MatLab	175
APPENDIX B	The Compact Disc	181
APPENDIX C	Mathematica Commands	183
APPENDIX D	MatLab Commands	189
Problem Solutions	195
Notes on the Text	281
References	285
Constants	287
Index	289

Chapter 1 Equations of Motion

1.0	Newton's Laws	3
1.1	Motion of the Planets about the Sun	8
1.2	Halley's Comet near the Sun	14
1.3	Voyager at Jupiter	17
1.4	Baseball with Air Friction	24
1.5	Follow the Bouncing Ball	28
1.6	Sky-Diving with a Parachute	32
1.7	Challenge Problems	36
