

## CONTENTS

Preface	v
Organizing Committees	ix
Dynamical Mean-Field Theory for Correlated Lattice Fermions <i>K. Byczuk</i>	1
Jordan-Wigner Fermionization and the Theory of Low-Dimensional Quantum Spin Models. Dynamic Properties <i>O. Derzhko</i>	35
Quantum Computing with Electrical Circuits: Hamiltonian Construction for Basic Qubit-Resonator Models <i>M.R. Geller</i>	89
Coherent Control and Decoherence of Charge States in Quantum Dots <i>P. Machnikowski</i>	119
Basics of Spintronics: From Metallic to All-Semiconductor Magnetic Tunnel Junctions <i>J.A. Majewski</i>	159
Physics of Carbon Nanostructures <i>V.A. Osipov</i>	201
Quantum Molecular Dynamics Simulations for Warm Dense Matter and Applications in Astrophysics <i>R. Redmer, N. Nettelmann, B. Holst, A. Kietzmann and M. French</i>	223

Correlated Systems on Geometrically Frustrated Lattices: From Magnons to Electrons <i>J. Richter and O. Derzhko</i>	237
Full-Potential Local-Orbital Approach to the Electronic Structure of Solids and Molecules <i>M. Richter, K. Koepernik and H. Eschrig</i>	271
Theory of Dynamical Thermal Transport Coefficients in Correlated Condensed Matter <i>B. Sriram Shastry</i>	293
Carrier Concentration Induced Ferromagnetism in Semiconductors <i>T. Story</i>	327
Index	353
