

Contents

Preface to Second Edition	xi
Preface to First Edition	xiii
Introduction: Theories of Thermodynamics, Kinetic Theory and Statistical Mechanics	xvii
Chapter 1 Elementary Concepts in Statistics and Probability	1
1.0. Random Variables and Their Distributions	1
1.1. The Binomial Distribution	2
1.2. Length of a Winning Streak	4
1.3. Brownian Motion and the Random Walk	5
1.4. Poisson versus Normal (Gaussian) Distributions	6
1.5. Central Limit Theorem (CLT)	10
1.6. Multinomial Distributions, Statistical Thermodynamics	13
1.7. The Barometer Equation	15
1.8. Other Distributions	16
Chapter 2 The Ising Model and the Lattice Gas	19
2.0. Physical Applications of the Binary Model	19
2.1. Some Background and Motivation	20
2.2. First-Principles Statistical Theory of Paramagnetism	21
2.3. More on Entropy and Energy	24
2.4. Some Other Relevant Thermodynamic Functions	25
2.5. Mean-Field Theory, Stable and Metastable Solutions	26
2.6. The Lattice Gas	30
2.7. The Nearest-Neighbor Chain: Thermodynamics in 1D	31

2.8.	The Disordered Ising Chain	32
2.9.	Other Magnetic Systems in One Dimension	32
Chapter 3 Elements of Thermodynamics		36
3.1.	The Scope of Thermodynamics	36
3.2.	Equations of State and Some Definitions	37
3.3.	Maxwell Relations	40
3.4.	Three Important Laws of Thermodynamics	40
3.5.	The Second Derivatives of the Free Energy	43
3.6.	Phase Diagrams for the van der Waals Gas	44
3.7.	Clausius–Clapeyron Equation	48
3.8.	Phase Transitions	50
3.9.	The Carnot Cycle	54
3.10.	Superconductivity	57
Chapter 4 Statistical Mechanics		60
4.0.	An Axiomatic Approach and the Ergodic Hypothesis	60
4.1.	The Formalism — and a False Start	62
4.2.	Gibbs’ Paradox and Its Remedy	65
4.3.	The Gibbs Factor	68
4.4.	The Grand Ensemble	69
4.5.	Non-Ideal Gas and the 2-Body Correlation Function	71
4.6.	The Virial Equation of State	73
4.7.	Weakly Non-Ideal Gas	74
4.8.	Two-body Correlations	77
4.9.	Configurational Partition Function in 1D	82
4.10.	One Dimension versus Two	84
4.11.	Two Dimensions versus Three: The Debye–Waller Factors	86
4.12.	Specific Heat of Quasi-Ideal Dilute Atomic and Diatomic Gases	90
4.13.	Nanophysics and Inhomogeneity	93
Chapter 5 The World of Bosons		94
5.0.	Quantum “Statistics”	94
5.1.	Two Types of Bosons and Their Operators	94
5.2.	Number Representation and the Many-Body Problem	97
5.3.	The Adiabatic Process and Conservation of Entropy	99
5.4.	Many-Body Perturbations	100
5.5.	Photons	101

5.6.	Phonons	105
5.7.	Ferromagnons	107
5.8.	Conserved Bosons and the Ideal Bose Gas	110
5.9.	Nature of “Ideal” Bose–Einstein Condensation	113
5.10.	Ideal Bose-Einstein Condensation in Low Dimensions	115
5.11.	Consequences of a Hard Core Repulsion in 1D	118
5.12.	Bosons in 3D Subject to Weak Two-Body Forces	121
5.13.	Superfluid Helium (He II)	126

Chapter 6 All About Fermions: Theories of Metals, Superconductors, Semiconductors 131

6.1.	Fermi–Dirac Particles	131
6.2.	Slater Determinant: The Ground State	132
6.3.	Ideal Spinless Fermi–Dirac Gas	133
6.4.	Ideal Fermi–Dirac Gas with Spin	135
6.5.	Fermi Integrals	136
6.6.	Thermodynamic Functions of an Ideal Metal	137
6.7.	Quasiparticles and Elementary Excitations	140
6.8.	Semiconductor Physics: Electrons and Holes	142
6.9.	<i>n</i> -Type Semiconductor Physics: The Statistics	143
6.10.	Correlations and the Coulomb Repulsion	144
6.11.	Miscellaneous Properties of Semiconductors	147
6.12.	Aspects of Superconductivity: Cooper Pairs	149
6.13.	Aspects of BCS Theory	152
6.14.	Contemporary Developments in Superconductivity	158

Chapter 7 Kinetic Theory 160

7.1.	Scope of This Chapter	160
7.2.	Quasi-Equilibrium Flows and the Second Law	161
7.3.	The Collision Integral	162
7.4.	Approach to Equilibrium of a “Classical” Non-Ideal Gas	165
7.5.	A New Look at “Quantum Statistics”	168
7.6.	Master Equation: Application to Radioactive Decay	169
7.7.	Boltzmann Equation	171
7.8.	Electrical Currents in a Low-Density Electron Gas	174
7.9.	Diffusion and the Einstein Relation	176
7.10.	Electrical Conductivity of Metals	177
7.11.	Exactly Solved “Backscattering” Model	178
7.12.	Electron-Phonon Scattering	180

7.13.	Approximating the Boltzmann Equation	181
7.14.	Crossed Electric and Magnetic Fields	183
7.15.	Propagation of Sound Waves in Fluids	184
7.16.	The Calculations and Their Result	189
Chapter 8 The Transfer Matrix		195
8.1.	The Transfer Matrix and the Thermal Zipper	195
8.2.	Opening and Closing a “Zipper Ladder” or Polymer	198
8.3.	The Full Zipper ($N > 2$)	203
8.4.	The Transfer Matrix and Gaussian Potentials	204
8.5.	Transfer Matrix in the Ising Model	205
8.6.	The Ising Ladder or Polymer	207
8.7.	Ising Model on the Isotropic Square Lattice (2D)	209
8.8.	The Phase Transition	214
8.9.	A Question of Long-Range Order	216
8.10.	Ising Model in 2D and 3D	218
8.11.	Antiferromagnetism and Frustration	219
8.12.	Maximal Frustration	222
8.13.	Separable Model Spin-Glass without Frustration	224
8.14.	Critical Phenomena and Critical Exponents	225
8.15.	Potts Models	229
Chapter 9 Monte Carlo and Other Computer Simulation Methods		232
9.1.	Numerical Methods in Statistical Mechanics	232
9.2.	Molecular Dynamics	232
9.3.	Stochastic Processes	234
9.4.	Transition Rates and the Master Equation	235
9.5.	Monte Carlo Moves	237
9.6.	Applications of ARM and DOMC	241
9.7.	Monte Carlo Estimates of Thermal Averages	241
9.8.	Equilibration Times	243
9.9.	Discrete Variables	245
9.10.	Continuous Thermodynamic Functions and Histogram Methods	246
9.11.	Phase Transitions	249
9.12.	MC Calculation of Critical Exponents: Finite-Size Scaling	249

Chapter 10	Critical Phenomena and the Renormalization Group	254
10.1.	The Problem with Mean-Field Theories	254
10.2.	Block-Spin Transformations for the Ising Model	256
10.3.	Effect of Renormalization on the Spin Configurations	258
10.4.	Renormalization of the Correlation Length	260
10.5.	Mathematical Form of the RG Transformation	260
10.6.	Effective or “Renormalized” Interactions	261
10.7.	A Simple Example: The One-Dimensional Ising Model	263
10.8.	Renormalization Trajectories	265
10.9.	RG Trajectories and Critical Properties	267
10.10.	Mathematical Analysis of RG Trajectories Near a Fixed Point	268
10.11.	Calculating the Other Critical Exponents from the Eigenvalue Exponents	270
10.12.	Exponent Identities	271
10.13.	Calculating Values for the Eigenvalue Exponents Using MC Simulations	272
10.14.	First-Order Transitions and Discontinuity Fixed Points	276
10.15.	Calculation of the Renormalized Couplings	277
Chapter 11	Some Uses of Quantum Field Theory in Statistical Physics	279
11.1.	Outline of the Chapter	279
11.2.	Diffusion on a Lattice: Standard Formulation	280
11.3.	Diffusion as Expressed in QFT	282
11.4.	Diffusion <i>plus</i> One-Body Recombination Processes	285
11.5.	Diffusion and Two-Body Recombination Processes	286
11.6.	Questions Concerning Long-Range Order	288
11.7.	Mermin–Wagner Theorem	290
11.8.	Proof of Bogolubov Inequality	293
11.9.	Correlation Functions and the Free Energy	294
11.10.	Introduction to Thermodynamic Green’s Functions	297
	Appendix A: Solutions to Selected Problems	305
	Bibliography	327
	Index	331
