<b>Preface</b>	<b>vii</b>
<b>Organization of the book</b>	<b>ix</b>
<b>Acknowledgements</b>	<b>xi</b>
<b>1 Introduction to harmonic maps</b>	<b>1</b>
1.1 Dirichlet principle of harmonic maps . . . . .	1
1.2 Intrinsic view of harmonic maps . . . . .	2
1.3 Extrinsic view of harmonic maps . . . . .	3
1.4 A few facts about harmonic maps . . . . .	4
1.5 Bochner identity for harmonic maps . . . . .	5
1.6 Second variational formula of harmonic maps . . . . .	7
<b>2 Regularity of minimizing harmonic maps</b>	<b>9</b>
2.1 Minimizing harmonic maps in dimension two . . . . .	9
2.2 Minimizing harmonic maps in higher dimensions . . . . .	15
2.3 Federer's dimension reduction principle . . . . .	27
2.4 Boundary regularity for minimizing harmonic maps . . . . .	31
2.5 Uniqueness of minimizing tangent maps . . . . .	35
2.6 Integrability of Jacobi fields and its applications . . . . .	40
<b>3 Regularity of stationary harmonic maps</b>	<b>49</b>
3.1 Weakly harmonic maps into regular balls . . . . .	49
3.2 Weakly harmonic maps in dimension two . . . . .	57
3.3 Stationary harmonic maps in higher dimensions . . . . .	64
3.4 Stable-stationary harmonic maps into spheres . . . . .	77
<b>4 Blow up analysis of stationary harmonic maps</b>	<b>87</b>
4.1 Preliminary analysis . . . . .	87
4.2 Rectifiability of defect measures . . . . .	94
4.3 Strong convergence and interior gradient estimates . . . . .	101
4.4 Boundary gradient estimates . . . . .	106

<b>5</b>	<b>Heat flows to Riemannian manifolds of NPC</b>	<b>109</b>
5.1	Motivation . . . . .	109
5.2	Existence of short time smooth solutions . . . . .	110
5.3	Existence of global smooth solutions under $K^N \leq 0$ . . . . .	113
5.4	An extension of Eells-Sampson's theorem . . . . .	118
<b>6</b>	<b>Bubbling analysis in dimension two</b>	<b>125</b>
6.1	Minimal immersion of spheres . . . . .	126
6.2	Almost smooth heat flows in dimension two . . . . .	134
6.3	Finite time singularity in dimension two . . . . .	141
6.4	Bubbling phenomena for 2-D heat flows . . . . .	144
6.5	Approximate harmonic maps in dimension two . . . . .	153
<b>7</b>	<b>Partially smooth heat flows</b>	<b>161</b>
7.1	Monotonicity formula and a priori estimates . . . . .	161
7.2	Global smooth solutions and weak compactness . . . . .	165
7.3	Finite time singularity in dimensions at least three . . . . .	173
7.4	Nonuniqueness of heat flow of harmonic maps . . . . .	174
7.5	Global weak heat flows into spheres . . . . .	176
7.6	Global weak heat flows into general manifolds . . . . .	179
<b>8</b>	<b>Blow up analysis on heat flows</b>	<b>189</b>
8.1	Obstruction to strong convergence . . . . .	190
8.2	Basic estimates . . . . .	192
8.3	Stratification of the concentration set . . . . .	197
8.4	Blow up analysis in dimension two . . . . .	204
8.5	Blow up analysis in dimensions $n \geq 3$ . . . . .	207
<b>9</b>	<b>Dynamics of defect measures in heat flows</b>	<b>219</b>
9.1	Generalized varifolds and rectifiability . . . . .	220
9.2	Generalized varifold flows and Brakke's motion . . . . .	231
9.3	Energy quantization of the defect measure . . . . .	239
9.4	Further remarks . . . . .	249
	<b>Bibliography</b>	<b>251</b>
	<b>Index</b>	<b>265</b>
