

CONTENTS

<i>Preface</i>	<i>xvii</i>
<i>Contributing Authors</i>	<i>xix</i>
Chapter 1. Optical and Dynamic Properties of Undoped and Doped Semiconductor Nanostructures	1
<i>Jin Z. Zhang and Christian D. Grant</i>	
1. Introduction	1
2. Synthesis of Semiconductor Nanomaterials	3
3. Structural Characterization	5
4. Optical Properties	9
4.1. Linear Optical Absorption and Emission	10
4.2. Non-Linear Optical Absorption and Emission	17
4.3. Other Relevant Optical Properties: Chemiluminescence and Electroluminescence	20
5. Charge Carrier Dynamics	21
5.1. Ultrafast Time-Resolved Laser Techniques	21
5.2. Linear Dynamic Properties: Relaxation, Trapping, and Recombination	22
5.3. Non-Linear Dynamic Properties	26
5.4. Charge Transfer Dynamics Involving Nanoparticles	29
6. Doped Semiconductor Nanomaterials	30
7. Applications of Optical Properties	36
7.1. Energy Conversion: Photovoltaics and Photoelectrochemistry	37
7.2. Photochemistry and Photocatalysis	38
7.3. Chemical and Biological Sensing	42
7.4. Photonics and Solid State Lighting	42
7.5. Single Molecule and Single Nanoparticle Spectroscopy	46
8. Concluding Remarks	48

Acknowledgements	48
References	48

Chapter 2. Nanostructure Presented Chemiluminescence and Electrochemiluminescence **63**
Zhouping Wang and Jinghong Li

1. Introduction	63
1.1. Nanomaterials and Nanostructure	63
1.2. Chemiluminescence and Electrochemiluminescence	64
2. Nanostructure Presented Chemiluminescence	65
2.1. Nanostructure as Catalyst in Chemiluminescence	65
2.1.1. Liquid-Phase Chemiluminescence	65
2.1.2. Air-Phase and Aerosol Chemiluminescence	76
2.2. Nanostructure as Luminophor in Chemiluminescence	79
2.2.1. QDs Chemiluminescence	79
2.2.2. Nanogold Chemiluminescence	84
3. Nanostructure Presented Electrochemiluminescence	85
3.1. QDs Electrochemiluminescence	85
3.2. Nanostructure Assisted Electrochemiluminescence	91
3.3. Nanogold Presented Electrochemiluminescence	94
3.4. Other Nanostructure Presented Electrochemiluminescence	96
4. Conclusions and Outlook	97
Acknowledgements	97
References	97

Chapter 3. Excitons in Nanoscale Systems: Fundamentals and Applications **103**
Gregory D. Scholes and Garry Rumbles

1. Introduction	103
2. What is an Exciton in a Nanoscale System?	105
2.1. Limiting Cases of Excitons	106

2.2.	A General Picture of Nanoscale Excitons	106
2.3.	Exciton Binding Energy	109
2.4.	Singlet-Triplet Splitting and the Exchange Interaction	111
2.5.	Exciton-Vibration Coupling	113
3.	Single-Wall Carbon Nanotubes	115
4.	Conjugated Polymers	118
4.1.	The Basic Picture of Conjugated Polymer Excitons	118
4.2.	Conformational Subunits and Their Interactions	120
4.3.	Exciton-Phonon Coupling and the Role of Torsional Modes	122
4.4.	Ultrafast Dynamics of Excitons	124
5.	Quasi-One-Dimensional Systems	125
6.	Semiconductor Nanocrystals	127
6.1.	Size-Tunable Properties	128
6.2.	Surface Passivation	129
6.3.	Shells and Heterostructures	130
6.4.	Line Broadening and Fine Structure	133
6.5.	Multiple Exciton Generation	135
7.	Nanoscale Charge Separation	136
7.1.	Techniques and Studies	140
8.	Outlook	143
	Acknowledgements	144
	References	144

Chapter 4. Silicon Nanocrystal Assemblies: Universal Spin-Flip Activators? 159

Dmitri Kovalev and Minoru Fujii

1.	Introduction	160
1.1.	Nanosilicon, Current Status	160
1.2.	Singlet Oxygen: Physics, Chemistry and Applications	162
1.3.	Energy Transfer Processes	164
1.4.	Singlet Oxygen Photosensitizers	166
1.5.	Content of this Article	168
2.	Physics of Silicon Nanocrystals	169

2.1.	Morphological Properties of Si Nanocrystal Assemblies	169
2.2.	Luminescence Properties of Si Nanocrystal Assemblies	171
2.3.	Spin Structure of Excitons Confined in Si Nanocrystals	177
3.	Silicon Nanocrystals as a Singlet Oxygen Photosensitizer	179
3.1.	Main Observations. Low Temperatures	179
3.2.	Microscopical Mechanism of Energy Transfer from Si Nanocrystals to Oxygen Molecules	187
3.3.	Dynamics of Energy Transfer	191
3.4.	Energy Transfer at Elevated Temperatures	195
4.	Photochemical Activity of Singlet Oxygen Generated by Si Nanocrystals	200
5.	Biomedical Applications	204
6.	Photosensitization of Other Materials	206
7.	Conclusion	210
	Acknowledgements	211
	References	212

Chapter 5. DNA-Templated Nanowires: Context, Fabrication, Properties and Applications **217**
Qun Gu and Donald T. Haynie

1.	Introduction	217
1.1.	Moore's Law	218
1.2.	Self-Assembly and Molecular Recognition	220
1.3.	Nanoscience, Nanotechnology and Nanosystems	222
2.	Nanowires	223
3.	DNA-Templated Nanowires	227
3.1.	Introduction	227
3.2.	DNA Structure	231
3.3.	DNA Stretching and Positioning	232
3.4.	Nanowire Fabrication Methodologies	239
3.5.	Electrical Nanowires	242
3.5.1.	Silver/Gold	242
3.5.2.	Palladium/Platinum/Copper	253

3.6. Magnetic Nanowires	259
3.7. Semiconductor Nanowires	262
3.8. Conducting Polymer Nanowires	267
3.9. Applications	271
4. Conclusion	275
References	277

Chapter 6. Solution-Based Synthesis of Oriented One-Dimensional Nanomaterials **287**
Jun Liu and Guozhong Cao

1. Introduction: New Frontiers in One-Dimensional Nanomaterials	288
1.1. Nanowire Array Based Nano-Piezoelectric Devices	288
1.2. Dye Sensitized Solar Cells	289
1.3. Superhydrophobic Surfaces (SHSs)	291
1.4. Synthesis of 1DNMs	293
2. Solution Approaches for Making Oriented 1DNM's	295
3. Template-Based Approach	296
3.1. Electrochemical Deposition	297
3.2. Electrophoretic Deposition	303
3.3. Template Filling	310
3.3.1. Colloidal Dispersion Filling	310
3.3.2. Melt and Solution Filling	312
3.3.3. Centrifugation	313
3.4. Converting from Consumable Templates	314
4. Templateless 1DNMs Synthesis	315
4.1. General Theory of Nucleation and Growth	315
4.2. Unseeded Growth of 1DNMs	319
4.3. Nanoparticle Seeded Growth	320
4.3.1. Mechanism of Seeded Growth of Oriented 1DNMs	321
4.3.2. Electrochemical Deposition of Polymeric 1DNMs	326

4.4. Sequential Nucleation and Growth	329
5. Concluding Remarks	333
Acknowledgements	334
References	335

Chapter 7. One- and Two-Dimensional Assemblies of Nanoparticles: Mechanisms of Formation and Functionality **345**

Nicholas A. Kotov and Zhiyong Tang

1. Introduction	346
2. Formation Mechanism of 1D NP Assembly	346
2.1. Origins of the NP Anisotropy	347
2.2. Preparation of 1D NP Assemblies Upon the Anisotropy	351
3. Functionality of 1D NP Assembly	354
4. Formation Mechanism of 2D NP Assembly	357
4.1. 2D Assembly of NPs Produced at the Immiscible Interface	357
4.2. 2D Assembly of NPs Produced by the Biological Templates	361
4.3. Preparation of 2D Assembly of NPs Upon the Anisotropy	363
5. Functionality of 2D NP Assembly	366
5.1. Optical Property of 2D NP Assemblies	367
5.2. Optoelectrical Response of 2D NP Assemblies	368
6. Problems and Promises of 1D and 2D NP Assemblies	369
6.1. Formation Mechanism of 1D and 2D NP Assemblies	369
6.2. Functionality of 1D and 2D NP Assemblies	370
Acknowledgements	371
References	371

Chapter 8. Synthesis of Porous Polymers Using Supercritical Carbon Dioxide **377**
Colin D. Wood and Andrew I. Cooper

1. Introduction	377
2. Porous Materials and Supercritical Fluids	378
3. CO ₂ as a Pressure-Adjustable Template/Porogen	379
4. Polymer Solubility in CO ₂	381
5. High Throughput Solubility Measurements in CO ₂	382
6. Inexpensive and Biodegradable CO ₂ -Philes	382
7. Templating of Supercritical Fluid Emulsions	384
8. Conclusions	389
Acknowledgements	389
References	390

Chapter 9. Hierarchical Macro-Mesoporous Oxides and Carbons: Towards New and More Efficient Hierarchical Catalysis **393**
Alexandre Léonard, Aurélien Vantomme and Bao-Lian Su

1. Introduction	394
2. Introduction of the Concept of “Hierarchical Catalysis”	397
3. Conception of Hierarchically Porous Materials	399
3.1. Hierarchical Macro-Mesoporous Silica	399
3.1.1. Micromolding by Spheres and Other “Hard” Macrotemplates	399
3.1.2. Microorganisms and Biological Molecules as Macrotemplates	402
3.1.3. Emulsions and Bubbles as Macrotemplates	403
3.1.4. Macro-Mesoporous Silica Monoliths by Polymerization-Induced Phase Separation	405

3.1.5. Macro-Mesoporous Silica Prepared by Other Original Routes	408
3.2. Hierarchical Macro-Mesoporous Metal Oxides	410
3.2.1. Hierarchical Macro-Mesoporous Aluminosilicates	410
3.2.2. Hierarchical Macro-Mesoporous ZrO ₂ and TiO ₂	415
3.2.3. Hierarchical Macro-Mesoporous Nb ₂ O ₅ , Ta ₂ O ₅ , Y ₂ O ₃ , Co ₃ O ₄ , SnO ₂ , MnO ₂ and Mn ₂ O ₃	417
3.2.4. Hierarchical ZnO	419
3.3. Hierarchical Macro-Mesoporous Bimetallic Oxides	420
3.4. Hierarchical Carbon-Based Materials	422
4. Emerging Catalytic Applications of Hierarchically Porous Materials	424
4.1. Macro-Mesoporous Silica in Catalysis	424
4.2. Macro-Mesoporous Aluminosilicates in Catalysis	426
4.3. Macro-Mesoporous Single and Bi-Metallic Oxides in Catalysis	427
4.4. Macro-Mesoporous Carbons as High-Potential Supports	429
5. Conclusions and Outlook	429
Acknowledgements	431
References	431

Chapter 10. Environmental Application of Nanotechnology **439**

*G. Ali Mansoori, Tahereh Rohani Bastami,
Ali Ahmadpour and Zarrin Eshaghi*

1. General Introduction	440
2. Nano-Materials and Their Environmental Applications	443
2.1. Titanium Dioxide (TiO ₂) Based Nanoparticles	443
2.2. Iron Based Nanoparticles	452
2.3. Bimetallic Nanoparticles	457
2.4. Nanoparticulate Photocatalysts and Catalysts	460
2.5. Nanoclays	463
2.6. Nanotubes	465

2.7. Dendrimer and Nanosponges	467
2.8. Self-Assemblies (In General)	471
2.9. Micelles (Self-Assembled Surfactants)	473
2.10. Magnetic Nanoparticles	474
2.11. Nanomembrane and Nanosieve	480
3. Conclusions	483
Acknowledgements	483
Glossary	485
References	488

**Chapter 11. Nanostructured Ionic and Mixed
Conducting Oxides** **495**
Xin Guo and Sangtae Kim

1. Introduction	496
2. Oxygen Ion Conductors	497
2.1. Grain-Boundary Core and Space-Charge Layer	498
2.2. Grain-Boundary Electrical Properties	501
2.2.1. Schottky Barrier Model	501
2.2.2. Oxygen-Vacancy Concentration Profile	506
2.3. Grain Size Dependent Grain-Boundary Conductivity	509
2.4. Zirconia Films with Nanometer Thickness	512
2.5. Conclusions	516
3. Mixed Conductors of Oxygen Ions and Electrons	517
3.1. Microcrystalline CeO ₂	518
3.2. Nanocrystalline CeO ₂	522
3.3. Conclusion	525
4. Mixed Conductors of Oxygen Ions and Holes	526
4.1. Electronic and Ionic Contributions to the Grain-Boundary Conductivity	526
4.2. Thickness Dependent p-Type Conductivity of Epitaxial SrTiO ₃ Thin Films	530
4.3. Overlapping of Neighboring Space-Charge Layers in Nanocrystalline SrTiO ₃	534

4.4. Enhancement of p-Type Conductivity in Nanocrystalline BaTiO ₃	535
4.5. Conclusion	538
5. Concluding Remarks	538
References	539

**Chapter 12. Nanostructured Cathode Materials for
Advanced Li-Ion Batteries** **545**
Ying Wang and Guozhong Cao

1. Introduction	545
1.1. General Background	545
1.2. Lithium Batteries and Cathode Materials	547
2. Nanostructured Lithium Transition Metal Oxides and Nanosized Coatings on Lithium Transition Metal Oxides	551
2.1. Nanostructured Lithium Transition Metal Oxides	553
2.2. Nanosized Coatings on Lithium Transition Metal Oxides	554
3. Nanostructured Metal Oxides	559
3.1. Nanostructured Vanadium Oxides	559
3.2. Nanostructured Manganese Oxides	569
4. Nanostructured Lithium Phosphates and Nanostructured Carbon-Lithium Phosphate Composites	571
5. Nanostructured Composites	576
5.1. Nanostructured Carbon-Oxide Composites	576
5.2. Nanostructured Polymer-Oxide Composites	579
5.3. Nanostructured Metal-Oxide Composites and Other Composites	581
6. Concluding Remarks	583
Acknowledgements	584
References	585

Chapter 13. Nanostructured Materials for Solar Cells **593**
*Tingying Zeng, Qifeng Zhang, Jordan Norris
 and Guozhong Cao*

1. General Introduction	594
1.1. Photovoltaics and Conventional Inorganic Semiconductor Solar Cells	594
1.2. Key Problems in Conventional Semiconductor Solar Cells	597
1.3. Nanostructured Solar Cells	597
1.3.1. Grätzel Solar Cell and its Nanostructure	598
1.3.2. Organic Polymer Solar Cell and its Nanostructure	601
1.3.3. Typical Characteristics of Nanostructured Solar Cells	604
2. Nanostructured Materials for Grätzel Solar Cells	605
2.1. Materials Choice	605
2.1.1. Wide Bandgap Semiconductor Materials	607
2.1.2. Photosensitizers	608
2.1.3. Hole-Transport Material (HTM)	612
2.2. Porous TiO ₂ Nanostructures for Grätzel Solar Cells	613
2.2.1. Formation of the TiO ₂ Mesoporous Films	613
2.2.2. Photosensitization within the TiO ₂ Nanostructures in Grätzel Cells	616
2.2.3. Heterojunction of Nanostructured TiO ₂ Film in Grätzel Solid Solar Cells	621
2.3. Alternative Oxide Nanostructures for Grätzel Solar Cells	625
2.4. Ordered Semiconductor Nanoarchitectures for Grätzel Solar Cells	626
2.4.1. Random TiO ₂ Nanowires	626
2.4.2. Highly Organized ZnO Nanowires	628
2.4.3. Highly Organized TiO ₂ Nanotubes	629
2.5. Discussion	630
3. Nanostructured Materials for Organic Solar Cells	632
3.1. Fullerenes	633

3.2. Metal Nanoparticles	636
3.3. Semiconductor Nanocrystal Materials	639
3.4. Carbon Nanotubes	642
4. Summary and Discussion	645
Acknowledgements	645
References	645
