Preface	v
Acknowledgements	ix
About the Book Cover Design	xi
1. Acoustics, Hearing Limitations, and Sampling	1
1 Introduction . . . . .	1
2 The Sine Tone . . . . .	2
3 Human Hearing and Its Limitations . . . . .	4
3.1 Duration . . . . .	4
3.2 Pitch . . . . .	5
3.3 Amplitude and sound levels . . . . .	6
3.3.1 Sound intensity level (SIL) . . . . .	6
3.3.2 Sound pressure level (SPL) . . . . .	8
3.3.3 Just noticeable difference (JND) . . . . .	8
3.3.4 Equal loudness curve . . . . .	8
3.4 Auditory masking . . . . .	11
4 Sampling: The Art of Being Discrete . . . . .	13
4.1 Sampling theorem . . . . .	18
4.2 Aliasing . . . . .	20
5 Quantization and Pulse Code Modulation (PCM) . . . . .	26
5.1 SNR and QSNR . . . . .	28
6 DC Component . . . . .	29
7 Distortion and Square Waves . . . . .	31
7.1 Dithering . . . . .	33
8 Musical Examples . . . . .	37
References and Further Reading . . . . .	38

2.	Time-Domain Signal Processing I	40
1	Introduction . . . . .	40
2	Amplitude Envelope and ADSR . . . . .	41
3	Wavetable Synthesis . . . . .	43
4	Windowing, RMS, and Amplitude Envelope . . . . .	46
	4.1 Windowing: More details . . . . .	46
	4.2 RMS and amplitude envelope . . . . .	50
5	Time-Domain Fundamental Frequency Computation . . . . .	53
	5.1 Zero-crossing rate . . . . .	54
	5.2 Autocorrelation . . . . .	58
	5.3 Cross-correlation . . . . .	64
6	Sample Rate Conversion . . . . .	65
	6.1 Up-sampling . . . . .	65
	6.2 Down-sampling . . . . .	66
7	Overlap and Add (OLA) . . . . .	68
	7.1 OLA: Problems and solutions . . . . .	71
8	Musical Examples . . . . .	72
	References and Further Reading . . . . .	74
3.	Time-Domain Processes II	75
1	Introduction . . . . .	75
2	Granular Synthesis . . . . .	75
	2.1 Basic granular synthesis parameters . . . . .	76
	2.2 Asynchronous granular synthesis . . . . .	79
	2.3 Pitch shifting and time stretching/compression . . . . .	80
	2.4 Sound morphing with granular synthesis . . . . .	81
3	Amplitude Distortion and Waveshaping . . . . .	81
	3.1 Dynamic compressor . . . . .	83
	3.2 Distortion . . . . .	85
	3.3 Dynamic expander . . . . .	86
	3.4 Tape saturation . . . . .	87
	3.5 Waveshaping synthesis . . . . .	87
	3.5.1 Chebychev polynomials of the 1st kind . . . . .	88
4	Some Familiar Time-Domain DSP Effects . . . . .	91
	4.1 Equal power panning . . . . .	91
	4.2 Delays . . . . .	92
	4.2.1 Echo, chorus, and flanging . . . . .	92

5	Musical Examples . . . . .	95
	References and Further Reading . . . . .	96
4.	Sine Waves . . . . .	97
1	Introduction . . . . .	97
2	Sinusoids Revisited . . . . .	98
3	Imaginary, Complex Numbers, and Euler's Formula . . . . .	99
3.1	Euler's formula . . . . .	101
4	Sinusoidal Modulation Techniques I: Amplitude . . . . .	102
4.1	Beating . . . . .	102
4.2	Amplitude modulation and ring modulation . . . . .	105
4.3	Amplitude modulation (AM) . . . . .	106
4.4	Ring modulation . . . . .	108
4.4.1	Ring modulation with complex signals . . . . .	108
5	Sinusoidal Modulation Techniques II: Frequency . . . . .	110
5.1	FM: Sidebands and the Bessel function . . . . .	111
5.2	Modulation index . . . . .	115
5.3	General topics in FM control parameters . . . . .	116
6	Musical Examples . . . . .	118
	References and Further Reading . . . . .	121
5.	Linear Time-Invariant Systems . . . . .	122
1	Introduction . . . . .	122
2	Difference Equations: Starting with the Moving Average Algorithm . . . . .	123
2.1	Causality . . . . .	125
2.2	Difference equations: General form . . . . .	125
3	Linear-Time Invariant (LTI) Systems . . . . .	127
3.1	Linearity property: Scalability and superposition . . . . .	128
3.2	Time-invariance property: Time-shift invariance . . . . .	129
3.3	Importance of LTI systems in DSP . . . . .	131
4	Impulse Response . . . . .	132
4.1	Finite impulse response (FIR) and infinite impulse response (IIR) . . . . .	135
4.2	Stability and IIR systems . . . . .	136

5	Convolution . . . . .	138
5.1	Convolution “Need to Knows” . . . . .	140
6	System Diagrams and Digital Building Blocks . . . . .	141
7	Musical Examples . . . . .	143
6.	Frequency Response . . . . .	145
1	Introduction . . . . .	145
2	The Frequency Response . . . . .	146
2.1	Characteristics and properties of $H(e^{j\theta})$ . . . . .	149
2.1.1	Frequency range and Nyquist revisited . . . . .	149
2.1.2	$H(e^{j\theta})$ and periodicity property . . . . .	154
2.1.3	Symmetry . . . . .	155
2.2	More stuff on the frequency response . . . . .	156
3	Phase Response and Phase Distortion . . . . .	160
3.1	Phase delay . . . . .	163
3.2	Linearity and phase . . . . .	165
3.3	Phase response and continuous phase . . . . .	167
3.4	Group delay . . . . .	168
4	The (Almost) Magical Z-Transform . . . . .	172
4.1	What does all this mean? Part I . . . . .	174
4.2	What does all this mean? Part II: poles and zeros . . . . .	175
4.3	What does all this mean? Part III: the unit circle and the z-plane . . . . .	176
4.4	More “complex” systems . . . . .	181
5	Region of Convergence (ROC) . . . . .	181
5.1	Causal system ROC . . . . .	186
5.2	Mixed-causality systems . . . . .	187
5.3	ROC summary . . . . .	188
6	Stability and the Unit Circle . . . . .	188
7	The Inverse Z-Transform . . . . .	190
7.1	Long division method . . . . .	191
7.2	Taylor series expansion method . . . . .	193
7.3	Contour integration/residue theorem method . . . . .	195
8	Useful Tools in MATLAB <sup>®</sup> . . . . .	197
9	Musical Examples . . . . .	198
	References and Further Reading . . . . .	199

7.	Filters	200
1	Introduction . . . . .	200
2	Low/High/Band-Pass and Band-Stop Filters . . . . .	201
2.1	Filter design specifications . . . . .	203
2.2	Passband, stopband, and transition band . . . . .	204
2.3	Cutoff frequency . . . . .	205
2.4	Filter order, filter sharpness, and ripple . . . . .	205
2.5	MATLAB <sup>®</sup> filter design tools . . . . .	219
3	Filter Examples . . . . .	222
3.1	Subtractive synthesis and filters . . . . .	223
3.2	Bi-quadratic filter (a.k.a. Bi-quad filter) and the Wah-Wah filter . . . . .	225
3.3	The Comb-filter . . . . .	233
3.3.1	Comb-filter interpretation . . . . .	235
3.3.2	Comb-filter examples . . . . .	238
3.4	String vibration and standing waves . . . . .	242
3.5	Physical modeling synthesis and the plucked string model . . . . .	245
3.5.1	Direct implementation of difference equations . . . . .	253
3.6	Phase as a filtering application . . . . .	254
3.6.1	The chorus effect . . . . .	254
3.6.2	Multi-tap filters and filter banks . . . . .	256
3.6.3	Fractional delay . . . . .	259
3.6.4	The flanger effect . . . . .	261
3.6.5	The all-pass filter . . . . .	262
3.6.6	Very basic all-pass filter reverb . . . . .	266
4	Musical Examples . . . . .	272
	References and Further Reading . . . . .	274
8.	Frequency-Domain and the Fourier Transform	276
1	Introduction . . . . .	276
2	Additive Synthesis . . . . .	277
3	The Fourier Transform . . . . .	280
4	The Discrete-Time Fourier Transform (DTFT) and the Discrete Fourier Transform (DFT) . . . . .	281

- 4.1 Magnitude, Phase, and Other Basic Properties of the DFT . . . . . 288
- 4.2 Time Resolution vs. Frequency Resolution in DFTs . . . . . 289
- 5 Short-Time Fourier Transform (STFT) . . . . . 292
- 6 Zero Padding . . . . . 293
- 7 Aliasing Revisited . . . . . 295
- 8 Another Look: Down-Sampling and Up-Sampling Revisited . . . . . 298
  - 8.1 Down-Sampling . . . . . 298
  - 8.2 Up-Sampling . . . . . 302
- 9 Windowing Revisited: A View from the Frequency-Domain Side . . . . . 304
  - 9.1 Rectangular Window . . . . . 310
  - 9.2 Hann Window . . . . . 310
  - 9.3 Hamming Window . . . . . 311
  - 9.4 Blackman Window . . . . . 312
  - 9.5 Chebychev and Kaiser Windows . . . . . 312
  - 9.6 Not Just More Windowing Stuff . . . . . 313
- 10 The Fast Fourier Transform (FFT) . . . . . 319
- 11 Convolution (also) Revisited . . . . . 321
  - 11.1 Circular Convolution and Time-Aliasing . . . . . 322
- 12 One More Look at Dithering . . . . . 325
- 13 Spectrogram . . . . . 327
- 14 Fourier Transform Properties and Summary . . . . . 329
- 15 MATLAB® and Fourier Transform . . . . . 331
- 16 Musical Examples . . . . . 331
- References and Further Reading . . . . . 332
  
- 9. Spectral Analysis, Vocoders, and other Goodies . . . . . 333
  - 1 Introduction . . . . . 333
    - 1.1 Musical signals and important nomenclatures . . . . . 333
  - 2 Spectral Analysis . . . . . 335
    - 2.1 Long-term average spectrum (LTAS) . . . . . 336
    - 2.2 Log vs. linear . . . . . 336
    - 2.3 Spectral peaks, valleys, and spectral envelope . . . . . 340

2.4	Extraction of fundamental frequency and harmonics . . . . .	344
2.4.1	Inverse comb-filtering . . . . .	345
2.4.2	Cepstrum analysis . . . . .	349
2.4.3	Harmonic product spectrum . . . . .	350
3	Vocoders (Voice Coders) . . . . .	352
3.1	Channel-vocoder . . . . .	352
3.1.1	Filter banks, envelope followers, and the encoder . . . . .	354
3.1.2	Voiced and unvoiced analysis and the decoder . . . . .	356
3.1.3	Voiced and unvoiced decision-making . . . . .	359
3.1.3.1	Zero-crossing analysis . . . . .	359
3.1.3.2	Pre-emphasized energy ratio . . . . .	363
3.1.3.3	Low-band to full-band energy ratio . . . . .	363
3.1.3.4	Spectral flatness measure . . . . .	364
3.2	Linear predictive coding (LPC) . . . . .	366
3.3	LPC coefficient computation . . . . .	371
3.4	The phase vocoder . . . . .	373
3.4.1	Estimation of instantaneous frequency . . . . .	375
3.4.2	Phase unwrapping . . . . .	377
3.4.3	Phase vocoder: Filter-bank interpretation . . . . .	379
3.4.4	Phase vocoder: Fourier transform interpretation . . . . .	385
3.4.5	Phase vocoder basics: Time and pitch-shifting . . . . .	390
3.4.5.1	Time-shifting . . . . .	391
3.4.5.2	Pitch-shifting . . . . .	396
4	Research Topics in Computer Music . . . . .	397
4.1	Salient feature extraction . . . . .	397
4.1.1	Spectral envelope . . . . .	398
4.1.2	Spectral centroid . . . . .	399
4.1.3	Shimmer and Jitter . . . . .	400
4.1.4	Spectral flux . . . . .	400
4.1.5	Log spectral spread . . . . .	401
4.1.6	Roll-off . . . . .	401

4.1.7	Attack time (rise time) . . . . .	402
4.1.8	Amplitude modulation (Tremolo) . . . . .	402
4.1.9	Temporal centroid . . . . .	403
4.2	MIR (Music information retrieval) . . . . .	403
4.2.1	Query-by-humming (QbH) . . . . .	404
4.2.2	Automatic beat detection and rhythm analysis . . . . .	405
4.2.3	Automatic timbre recognition . . . . .	406
4.3	FMS (feature modulation synthesis) . . . . .	407
5	Musical Examples . . . . .	409
	References and Further Reading . . . . .	411
Appendix		415
1	To Scale or Not to Scale: That is the Question . . . . .	415
1.1	Equal temperament scale . . . . .	415
1.2	Just intonation . . . . .	416
1.3	Bark scale . . . . .	416
1.4	Mel scale . . . . .	417
2	MATLAB® Programs Used in This Book . . . . .	418
Index		423
