

CONTENTS

Foreword	v
Chapter 1: An introduction to complex metallic alloys and to the CMA network of excellence <i>Jean-Marie Dubois</i>	1
Chapter 2: Thermodynamics and phase diagrams <i>Livio Battezzati</i>	31
Chapter 3: Permanent magnets and microstructure <i>Paul McGuinness</i>	51
Chapter 4: Solidification <i>Peter Gille</i>	73
Chapter 5: Diffusive phase transformations <i>Yves Bréchet</i>	99
Chapter 6: Diffusionless transformations <i>C. Duhamel, S. Venkataraman, S. Scudino J. Eckert</i>	119
Chapter 7: Intermetallics: characteristics, problems and prospects <i>Gerhard Sauthoff</i>	147
Chapter 8: An introduction to electronic structure methods <i>D. A. Papaconstantopoulos</i>	189
Chapter 9: Crystallography of complex metallic alloys <i>Walter Steurer and Thomas Weber</i>	219

Chapter 10: Electronic properties of alloys <i>Östen Rapp</i>	259
Chapter 11: Electron transport properties of complex metallic alloys <i>Uichiro Mizutani</i>	319
Chapter 12: Chemical bonding and crystallographic features <i>Yuri Grin</i>	367
Chapter 13: Plasticity of complex metallic alloys <i>M. Feuerbacher</i>	377
