

CONTENTS

Preface	v
Markov Fields on Graphs <i>L. Accardi and H. Ohno</i>	1
Path to Quantum Life Information Sciences <i>L. Accardi and M. Ohya</i>	20
Some Aspects of Time Operators <i>A. Arai</i>	26
Entropic Chaos Degree of Rotations and Log-Linear Dynamics <i>M. Asano, M. Ohya and Y. Togawa</i>	36
Time Optimal Quantum Control of Mixed States <i>A. Carlini, A. Hosoya, T. Koike and Y. Okudaira</i>	53
On a Quantum Model of the Recognition Process <i>K.-H. Fichtner, L. Fichtner, W. Freudenberg and M. Ohya</i>	64
Two Hida Distributions Appearing in the Study of the Chern–Simons Path Integral in the Torus Gauge <i>A. Hahn</i>	85
Entropy Density and Free Energy Density: Variational Expressions <i>F. Hiai</i>	97
Perspectives of White Noise Analysis <i>T. Hida</i>	111
Review on Quantum Chaos Algorithm and Generalized Quantum Turing Machine <i>S. Iriyama and M. Ohya</i>	126

Cauchy Problems for Some Biological Systems – Modelling by Stochastic Differential Equations <i>A. Jamiolkowski</i>	142
On Non-Markovian Time Evolution in Open Quantum Systems <i>A. Kossakowski and R. Rebolledo</i>	161
On Generalized Entanglement <i>T. Matsuoka</i>	170
Adaptive Dynamics and its Applications to Chaos and NPC Problem <i>M. Ohya</i>	181
Micro-Macro Duality and Emergence of Macroscopic Levels <i>I. Ojima</i>	217
The Rigorous Few-Body Coulomb Treatments and Its Application to the Proton–Proton Phase Shift Calculation <i>S. Oryu, S. Nishinohara and S. Chiba</i>	229
Quantum State Tomography with Finite Sample Size <i>D. Petz, K. M. Hangos and L. Ruppert</i>	247
Local Density-of-States Modulation in High Temperature Superconductors <i>H. Sakata</i>	258
Duality between Gaussian and Poisson Noises <i>Si Si</i>	266
On Dissipative Quantum Dynamics in Small Non-Equilibrium Systems <i>M. Suzuki</i>	273
Josephson Flux Qubit <i>H. Takayanagi</i>	288
The Analysis of Gene Expression and Cis-Regulatory Elements in Large Microarray Expression Datasets <i>D. Wanke, J. Kilian, J. Supper, K. W. Berendzen, A. Zell and K. Harter</i>	294

Note on Quantum Mutual Entropy Type Measures <i>N. Watanabe</i>	315
Algebraic Geometrical Method in Singular Statistical Estimation <i>S. Watanabe</i>	325
Comparison between Several Square Tables Data Using Models of Symmetry and Asymmetry <i>K. Yamamoto, K. Tahata, N. Miyamoto and S. Tomizawa</i>	337
Theory of High Temperature Superconductivity in Lanthanum Cuprates: Interplay of Jahn-Teller and Mott-Physics <i>H. Kamimura</i>	350
Formalisms and Applications of Helical Restraint Potentials <i>J. Lee and W. Im</i>	359
Informational Approach for the Study of Cis-Regulatory Elements and DNA Binding Proteins <i>M. Nishihama, Y. Sakatsuji, A. Arinami and S. Miyazaki</i>	371
Application of Large-Scale mRNA Expression Data Sets for Comprehensive Analysis of Plant Hormone Signaling <i>H. Ohta and T. Obayashi</i>	381
Mathematical Approach to Bio-Informatics <i>K. Sato and M. Ohya</i>	389
What Quantum Chemists Learn from Bio Material Simulations? <i>T. Takada</i>	405
Evolution of MHC Class I Complex Region with Special Reference to Fragmentary LINE Sequences <i>Y. Tateno, K. Fukami-Kobayashi and H. Inoko</i>	412
The Maximum Entropy Principle for Generalized Entropies <i>M. Tsukada</i>	427
Toward <i>in Silico</i> Biology (From Sequences to Systems) <i>I. Yamato, T. Ando, A. Suzuki, K. Harada, S. Itoh, S. Miyazaki, N. Kobayashi and M. Takeda</i>	440
