<i>Preface</i>	v
1. Model Formulation	1
1.1 Classical models	1
1.1.1 Macroscopic balances	2
1.1.1.1 Mass and energy balances	2
1.1.1.2 Balances involving chemical kinetics	18
1.1.2 The quasi steady state assumption	27
1.1.3 Differential balances	32
1.1.3.1 Coordinate systems	32
1.1.3.2 Constitutive equations	36
1.1.3.3 Operator notation	38
1.1.3.4 Mass and energy balances	42
1.1.3.5 Problems in fluid mechanics	59
1.1.3.6 Summary of common boundary conditions	64
1.1.3.7 Symmetry	66
1.2 Abstract control volumes	69
2. Some Ordinary Differential Equations	79
2.1 First order equations	79
2.1.1 Separable equations	79
2.1.2 Linear, first order equations	80
2.1.3 Exact equations	82
2.1.4 Homogeneous equations	83
2.1.5 Bernoulli equation	85
2.1.6 Clairaut's equation	86
2.1.7 Riccati equation	87
2.2 Second order equations	89
2.2.1 Dependent variable does not occur explicitly	89
2.2.2 Free variable does not occur explicitly	90

2.2.3	Homogeneous equations . . . . .	91
2.3	Higher order equations . . . . .	92
2.4	Variable transformations . . . . .	92
2.5	The importance of being Lipschitz . . . . .	94
3.	Finite Dimensional Vector Spaces . . . . .	97
3.1	Basic concepts . . . . .	97
3.2	Examples . . . . .	99
3.3	Span, linear independence, and basis . . . . .	101
3.3.1	Coordinates . . . . .	106
3.4	Isomorphisms . . . . .	107
3.4.1	Isomorphisms of vector spaces . . . . .	107
3.4.2	Subspaces . . . . .	109
3.4.3	Sums . . . . .	111
3.4.4	Representation of subspaces . . . . .	113
3.5	Matrices . . . . .	116
3.5.1	Matrix algebra . . . . .	117
3.5.2	Gauss elimination . . . . .	119
3.5.3	Determinants . . . . .	123
3.5.3.1	Basic properties of determinants . . . . .	124
3.5.3.2	Calculation of determinants . . . . .	127
3.5.3.3	The derivative of a determinant . . . . .	129
3.5.4	The classical adjoint matrix . . . . .	129
3.6	Systems of linear algebraic equations . . . . .	130
3.6.1	Rank . . . . .	131
3.6.2	Applications of rank . . . . .	135
3.6.3	Solution structure . . . . .	141
3.6.4	The null and range space of a matrix . . . . .	148
3.6.5	Overdetermined systems . . . . .	151
3.7	The algebraic eigenvalue problem . . . . .	152
3.7.1	Finding eigenvalues and eigenvectors . . . . .	153
3.7.2	Multiplicity . . . . .	160
3.7.3	Similar matrices . . . . .	161
3.7.3.1	Equivalence relations . . . . .	163
3.7.4	Eigenspaces and eigenbases . . . . .	164
3.7.4.1	Diagonalization of simple and semi-simple matrices . . . . .	166
3.7.5	Generalized eigenspaces . . . . .	167
3.7.5.1	Generalized eigenbases . . . . .	171
3.7.6	Jordan canonical form . . . . .	175
3.7.7	Jordan form of real matrices with complex eigenvalues . .	179
3.7.8	Powers and exponentials of matrices . . . . .	183

3.7.9	Location of eigenvalues . . . . .	186
3.8	Geometry of vector spaces . . . . .	188
3.8.1	Vector products . . . . .	188
3.8.1.1	Inner product . . . . .	188
3.8.1.2	Cross product . . . . .	190
3.8.1.3	Triple scalar product . . . . .	191
3.8.1.4	Dyad or outer product . . . . .	193
3.8.2	Gram-Schmidt orthogonalization . . . . .	194
3.8.3	Eigenrows . . . . .	197
3.8.4	Real, symmetric matrices . . . . .	198
4.	Tensors . . . . .	201
4.1	Definitions and basic concepts . . . . .	202
4.2	Examples . . . . .	203
4.2.1	Matrices as operators . . . . .	204
4.2.2	Equivalence transformations . . . . .	208
4.3	The adjoint operator . . . . .	210
4.4	Tensors . . . . .	212
4.4.1	Transformation rules . . . . .	214
4.4.2	Invariants of tensors . . . . .	218
4.5	Some tensors from physics and engineering . . . . .	220
4.5.1	Fourier's law . . . . .	221
4.5.2	The stress tensor . . . . .	227
4.6	Vectors and tensors in curvilinear coordinates . . . . .	235
4.6.1	Proper transformations . . . . .	237
4.6.2	Vectors and transformations at a point . . . . .	238
4.6.3	Covariance and contravariance . . . . .	240
4.6.4	The physical components . . . . .	246
5.	Linear Difference Equations . . . . .	249
5.1	Linear equations with constant coefficients . . . . .	259
5.1.1	Homogeneous solutions . . . . .	260
5.1.2	Particular solutions . . . . .	263
5.2	Single, first order equations . . . . .	266
5.3	Single, higher order equations . . . . .	267
5.3.1	Solution by variable transformation . . . . .	268
5.3.1.1	Euler's equation . . . . .	268
5.3.2	Reduction of order . . . . .	268
5.3.3	Particular solution by variation of parameters . . . . .	270
5.4	Systems of linear difference equations . . . . .	272
5.4.1	Basic theorems . . . . .	273
5.4.2	Particular solution by variation of parameters . . . . .	275

5.4.3	Equations with constant coefficients . . . . .	277
5.4.3.1	Homogeneous solutions . . . . .	277
5.4.3.2	Particular solutions for constant inhomogeneous term . . . . .	282
5.5	Non linear equations . . . . .	285
5.5.1	Riccati's equation . . . . .	286
6.	Linear Differential Equations . . . . .	287
6.1	Linear equations with constant coefficients . . . . .	288
6.1.1	Homogeneous solutions . . . . .	288
6.1.2	Particular solutions . . . . .	290
6.2	Single, higher order equations . . . . .	293
6.2.1	Solution by variable transformation . . . . .	294
6.2.1.1	Euler's equation . . . . .	294
6.2.2	Reduction of order . . . . .	295
6.2.3	Particular solution by variation of parameters . . . . .	296
6.3	Systems of linear differential equations . . . . .	299
6.3.1	Basic theorems . . . . .	300
6.3.2	Particular solution by variation of parameters . . . . .	301
6.3.3	Equations with constant coefficients . . . . .	302
6.3.3.1	Homogeneous solutions . . . . .	303
6.3.3.2	Particular solutions for constant inhomogeneous term . . . . .	307
6.3.3.3	Dealing with complex eigenvalues . . . . .	310
6.3.3.4	Classification of steady states . . . . .	311
6.3.3.5	Stability of nonlinear ODEs . . . . .	319
6.4	Series solutions . . . . .	325
6.5	Some common functions defined by ODEs . . . . .	333
6.5.1	Exponential and trigonometric functions . . . . .	333
6.5.2	Bessel functions . . . . .	334
6.5.3	Legendre functions . . . . .	340
7.	Hilbert Spaces . . . . .	345
7.1	Infinite dimensional vector spaces . . . . .	346
7.1.1	Countable and uncountable infinities . . . . .	346
7.1.2	Normed spaces . . . . .	348
7.1.3	Bases in infinite dimensional spaces . . . . .	351
7.1.4	The function spaces $\mathcal{L}^p[0, 1]$ . . . . .	353
7.2	Hilbert spaces . . . . .	354
7.2.1	Inner products . . . . .	354
7.2.2	Examples . . . . .	356
7.2.3	Orthogonality . . . . .	357

7.2.4	Orthogonal projections . . . . .	361
7.2.5	Orthogonal complements . . . . .	363
7.3	Linear operators in Hilbert spaces . . . . .	363
7.3.1	The adjoint operator . . . . .	364
7.3.2	Examples . . . . .	365
7.3.3	Sturm-Liouville operators . . . . .	367
7.4	Eigenvalue problems . . . . .	368
7.4.1	Sturm-Liouville Problems . . . . .	372
7.4.2	Conversion of linear equations to SLP . . . . .	376
7.5	Fourier series . . . . .	377
7.5.1	Fourier sine series . . . . .	377
7.5.2	Fourier cosine series . . . . .	378
7.5.3	Complete Fourier series . . . . .	378
7.5.4	Gibb's phenomena . . . . .	381
7.5.5	Generalized Fourier series . . . . .	383
8.	Partial Differential Equations . . . . .	389
8.1	Fourier series methods . . . . .	389
8.1.1	Classification of second order PDEs . . . . .	390
8.1.2	Inner product method . . . . .	392
8.1.3	PDEs with Sturm-Liouville operators . . . . .	396
8.1.3.1	Homogeneous problem . . . . .	397
8.1.3.2	Homogeneous problem with transcendental equation for eigenvalues . . . . .	399
8.1.3.3	Inhomogeneous PDE . . . . .	409
8.1.3.4	Inhomogeneous, time varying boundary conditions . . . . .	411
8.1.4	Other self-adjoint PDEs . . . . .	415
8.2	Finite Fourier transform . . . . .	425
8.3	First order PDEs . . . . .	428
8.4	First order PDE and Cauchy's method . . . . .	432
8.4.1	Cauchy's method for linear equations . . . . .	434
8.5	Similarity transformation . . . . .	448
9.	Problems . . . . .	455
	Appendix . . . . .	497
A.1	Complex numbers . . . . .	497
	<i>Index</i> . . . . .	501
