<i>Preface</i>	v
1. Ellagitannins Renewed the Concept of Tannins	1
1.1 Old and New Concepts of Tannins	1
1.1.1 About the chemical stability of ellagitannins	2
1.1.2 Definition of ellagitannins in the narrow and wider senses	3
1.1.3 Stereochemistry of ellagitannins	4
1.1.4 Condensation of dehydroellagitannins with other substances	5
1.1.5 Accumulation of an ellagitannin of specific structure in a plant	7
1.2 Distribution of Ellagitannins in the Plant Kingdom	9
1.3 Formation and Classification of Ellagitannins in Plants	9
1.3.1 Oxidative biological transformations from gallotannins to ellagitannins and dehydroellagitannins	9
1.3.2 Regiospecificity of the HHDP group on the glucose core, and its correlation to plant families	11
1.3.3 <i>C</i> -glycosidic ellagitannins and complex tannins	12
1.3.3.1 Occurrence of <i>C</i> -glycosidic tannins in plants	12
1.3.3.2 Biomimetic synthesis of <i>C</i> -glycosidic ellagitannins	14
1.3.4 Oligomerization of ellagitannins leading to pentamers	14
1.3.4.1 Oligomers as main components in a plant species	16
1.3.4.2 Oligomerization via oxidative C–O and C–C coupling modes	17
1.3.4.2.1 The GOG- and GOGOG-type units	18
1.3.4.2.2 The DOG and D(OG) ₂ -type units	19
1.3.4.2.3 The GOD-type unit	23
1.3.5 Macrocyclic oligomers	24
1.3.6 Structural transformations of ellagitannin oligomers	26
1.3.6.1 Isomerization of dimers via Smiles rearrangement	26

1.3.6.2	Hydrolysis of ellagitannin oligomers into monomers	26
1.3.7	Seasonal transformations of ellagitannins in a plant	29
1.3.8	Production of ellagitannins by tissue cultures	29
1.4	Correlation of Ellagitannins of Various Oxidation Stages with Plant Evolution Systems	29
1.4.1	Classification of hydrolyzable tannins based on the oxidation stages of their polyphenolic functions	29
1.4.2	Correlation of the oxidation stages with Cronquist's system of plant evolution	32
1.4.3	Isolation of oxidized ellagitannin oligomers in specific plant orders	34
1.5	Main Ellagitannin-Rich Medicinal Plants	36
1.6	Properties and Primary Activities of Ellagitannins	39
1.6.1	Reduction, stabilization and precipitation of other substances by tannins, and solubilization of precipitates by excess tannin	39
1.6.2	Indexes of tannin binding activity and reversal of tannin biological activities	40
1.6.3	Antioxidant activities	40
1.7	Biological and Pharmacological Activities	43
1.7.1	Antiviral, antimicrobial and immunomodulatory activities	43
1.7.2	Antitumor activities	44
1.7.2.1	Inhibition of mutagenicity of carcinogens	45
1.7.2.2	Inhibition of tumor promotion	45
1.7.2.3	Host-mediated antitumor activity	46
1.7.3	Induction of apoptosis	46
1.7.4	Effects on liver functions and others	46
1.7.5	Absorption and metabolism of ellagitannins in animals	47
1.8	Bibliography	47
2.	Structural Diversity and Antimicrobial Activities of Ellagitannins	55
2.1	Monomeric Ellagitannins	55
2.1.1	Primary ellagitannins (HHDP esters)	57
2.1.2	Dehydroellagitannins	59
2.1.3	Modified dehydroellagitannins	60
2.1.4	C-Glycosidic ellagitannins	63
2.1.5	Complex tannins (hybrids bearing a flavan-3-ol moiety)	64
2.2	Oligomeric Ellagitannins	67
2.2.1	Oligomers linked with a dehydrodigalloyl group	69
2.2.2	Oligomers linked with valoneoyl and dehydrovaloneoyl groups	72

2.2.3	Oligomers linked with an isomeric valoneoyl group.....	77
2.2.4	C-Glycosidic ellagitannin oligomers.....	77
2.3	Chemotaxonomic Significance of Oligomeric Ellagitannins	81
2.4	Antimicrobial Effects of Ellagitannins	83
2.4.1	Variation of antibacterial effects according to bacterial species.....	83
2.4.2	Effects on <i>Helicobacter pylori</i>	84
2.4.3	Effects on antibiotic-resistant bacteria	85
2.4.4	Effects on <i>Leishmania donovani</i>	86
2.5	Bibliography	88
3.	Biosynthesis of Ellagitannins: Old Ideas and New Solutions	94
3.1	Introduction	94
3.2	Principal Structures and Definitions.....	96
3.3	Gallic Acid, the Principal Phenolic Unit	99
3.4	Biosynthesis of β -Glucogallin	101
3.5	'Simple' Galloylglucose Esters: the Route to Pentagalloylglucose ...	102
3.6	The Side Route to Gallotannins.....	106
3.7	Biosynthesis of Ellagitannins	107
3.7.1	Search for pentagalloylglucose oxidizing enzymes.....	107
3.7.2	Biosynthesis of a monomeric ellagitannin, tellimagrandin II ..	110
3.7.3	Biosynthesis of a dimeric ellagitannin, cornusiin E.....	110
3.8	Conclusions and Perspectives.....	113
3.9	Bibliography	115
4.	Physicochemical Properties and Biomimetic Reactions of Ellagitannins	119
4.1	Introduction	120
4.2	Water Solubility and Hydrophobic Association of Ellagitannins	121
4.2.1	Structures of ellagitannins and their water solubility	121
4.2.2	Hydrophobic association of pentagalloylglucose and ellagitannins with co-existing compounds	122
4.2.3	Self-association and biogenesis of dimeric ellagitannins	129
4.3	Biomimetic Transformation of Ellagitannins	131
4.3.1	Dehydroellagitannins and related compounds.....	131
4.3.2	Similarities and differences between the oxidative dimerization of the galloyl group and the pyrogallol-type catechin B-ring	135
4.3.3	Reactions of dehydroellagitannins and biomimetic conversions.....	137
4.3.4	Application of the reactions of the DHHDP bisester	140
4.3.5	Additional oxidation reactions of HHDP and related acyl groups.....	143

4.4 Conclusion	145
4.5 Bibliography	146
5. Strategies for the Synthesis of Ellagitannins	152
5.1 Introduction	153
5.2 Strategies for the Synthesis of Ellagitannins	154
5.2.1 2,3-HHDP-containing ellagitannins	156
5.2.1.1 Total synthesis of sanguin H-5	156
5.2.1.2 Construction of a 2,3-bridged ellagitannin scaffold ...	158
5.2.1.3 Total syntheses of (S)-configured ellagitannins praecoxin B and pterocaryanin C, and (R)- configured artificial ellagitannins mahtabin A and pariin M	159
5.2.2 4,6-HHDP-containing ellagitannins	164
5.2.2.1 Total synthesis of strictinin	164
5.2.2.2 Total syntheses of gemin D and hippomanin A	166
5.2.2.3 Construction of a 4,6-bridged ellagitannin scaffold ...	169
5.2.2.4 Synthesis of <i>O</i> -perbenzylagerstannin C	169
5.2.2.5 Tellimagrandin I and tellimagrandin II	173
5.2.2.5.1 Synthesis of <i>O</i> -permethyltellimagrandin I ..	174
5.2.2.5.2 Synthesis of <i>O</i> -permethyltellimagrandin II ..	176
5.2.2.5.3 Total synthesis of tellimagrandin I	176
5.2.2.5.4 Total synthesis of tellimagrandin II	178
5.2.2.6 Total synthesis of coriariin A, a dimeric ellagitannin	179
5.2.3 2,3,4,6-HHDP-containing ellagitannins	181
5.2.3.1 Synthesis of <i>O</i> -permethyl- α -pedunculagin	181
5.2.3.2 Total synthesis of pedunculagin via the biaryl coupling strategy	182
5.2.3.3 Total synthesis of pedunculagin via the double esterification strategy	184
5.2.4 2,4-HHDP-containing ellagitannins	186
5.2.4.1 Construction of a 2,4-bridged species	186
5.2.5 3,6-HHDP-containing ellagitannins	188
5.2.5.1 Synthesis of <i>O</i> -permethylcorilagin	188
5.3 Conclusion	191
5.4 Bibliography	191
6. Immunomodulatory Ellagitannin Chemistry	203
6.1 Immune Function: LPS, lipid A and TNF α	203
6.1.1 Lipid A	204
6.1.1.1 Lipid A structure and chemistry	205

6.1.1.2	Role in disease	206
6.1.1.3	Impact on human health	207
6.1.2	Lipoteichoic acid, peptidoglycan, and exotoxins	208
6.1.3	TNF α	209
6.1.3.1	TNF α generated from LPS exposure: mediator of septic shock	210
6.1.3.2	Potential for anticancer therapy	211
6.1.3.3	Monocyte response pathway	214
6.1.3.4	Role of LPBP, CD14, Tlr4, and other proteins	216
6.1.4	Small molecule mediators of LPS/TNF α -induced septic shock response	222
6.1.4.1	LPS agonists	222
6.1.4.2	LPS antagonists	223
6.2	Initial Discovery of Ellagitannins as Immunostimulants	232
6.2.1	Anticancer activity	232
6.2.1.1	Agrimoniin	233
6.2.1.2	Coriariin A	234
6.2.1.3	Other ellagitannins	235
6.2.2	Agrimoniin-mouse and hPBMC studies – IL-1 β release	238
6.2.2.1	Immunostimulation – IL-1 β secretion	238
6.2.2.2	Other ellagitannins	240
6.3	Ellagitannins as TNF α Secretion Inducers	243
6.3.1	β -PGG, agrimoniin, and a model dimer analog of coriariin A induce TNF α secretion from hPBMC's	243
6.3.2	Structure/activity profile of ellagitannins and gallotannins	244
6.4	Ellagitannins as Lipid A Agonists	246
6.4.1	Use of CD-14 antibodies as a probe for the participation of CD14 in tannin-stimulated TNF α release	246
6.4.2	Use of HeJ/OuJ mice as a probe for TLR-4 participation in tannin-stimulated TNF α release	247
6.5	Ellagitannins as TNF α Secretion Inhibitors	249
6.5.1	β -PGG as an LPS antagonist	250
6.5.1.1	<i>In vitro</i> studies with hPBMC's	251
6.5.1.2	<i>In vivo</i> testing of live rats experiencing septic shock	251
6.5.2	Dimeric gallotannin analogues as lipid A antagonists	252
6.5.2.1	<i>In vitro</i> testing with hPBMC's	253
6.5.2.2	<i>In vivo</i> testing with live rats	255
6.6	Conclusion	256
6.7	Bibliography	257

7. Bioavailability and Metabolism of Ellagic Acid and Ellagitannins	273
7.1 Introduction	273
7.2 How Relevant Are ETs in the Diet?	274
7.3 Do Ellagitannins and Ellagic Acid Show Biological Activity?	275
7.4 Is the Analytical Methodology Ready for the Analysis of these Metabolites <i>in vivo</i> ?	280
7.5 Models to Study Bioavailability and Metabolism	281
7.5.1 <i>In vitro</i> digestion	282
7.5.2 <i>In vitro</i> cell lines to study uptake and metabolism	282
7.5.3 Animal models	283
7.5.4 Humans	285
7.6 What Bioavailability and Metabolism Events Take Place in Different Human Body Sites?	288
7.6.1 Absorption of free EA	288
7.6.2 Intestinal microflora metabolism	289
7.6.3 Phase I and phase II metabolism	290
7.6.4 Tissue distribution	290
7.7 The Whole Picture of Ellagitannin Bioavailability	291
7.8 Conclusion	291
7.9 Bibliography	293
8. Sources and Health Effects of Dietary Ellagitannins	298
8.1 Introduction	298
8.2 Ellagitannins and Ellagic Acid in Foods	299
8.2.1 Analytical methods	299
8.2.2 Fresh and processed berries	302
8.2.3 Pomegranate juice	305
8.2.4 Grape juice and wine	305
8.2.5 Oak-aged wine	306
8.2.6 Walnuts	307
8.3 Dietary Intake	307
8.4 Potential Health Benefits of Foods Rich in Ellagitannins	308
8.4.1 Antioxidant activity	308
8.4.2 Inhibition of growth of human pathogenic microbes	310
8.4.3 Inhibition of cancer cell growth	311
8.4.4 Cancer prevention	313
8.5 Conclusions	314
8.6 Bibliography	315
9. C-Glycosidic Ellagitannins and Their Influence on Wine Chemistry	320
9.1 C-Glycosidic Ellagitannins – A Special Subclass of Ellagitannins	320
9.1.1 Characteristic structural features and natural occurrence	320

9.1.1.1	Oak and chestnut <i>C</i> -glycosidic ellagitannins.....	322
9.1.1.2	Complex <i>C</i> -glycosidic ellagitannins.....	324
9.1.2	Biogenetic construction – What’s known !?.....	327
9.2	Vescalagin <i>versus</i> Castalagin.....	333
9.2.1	Chemical reactivity dichotomy.....	333
9.2.1.1	Refractory chemical behavior of castalagin.....	334
9.2.1.2	Diastereofacial differentiation of the vescalagin- derived benzylic cation.....	336
9.2.2	Hemisynthesis of flavano-ellagitannins – The acutissimins story.....	338
9.3	Impact of Vescalagin on the Chemical Profile of Wine.....	341
9.3.1	Occurrence of flavano-ellagitannins in red wine.....	341
9.3.2	An example of a condensation reaction with a non-phenolic wine nucleophile.....	345
9.3.3	Influence on wine color modulation.....	347
9.3.3.1	Anthocyanins and wine coloration – A few facts.....	347
9.3.3.2	Hemisynthesis of anthocyano-ellagitannin hybrids....	348
9.3.3.3	Anthocyano-ellagitannins and wine coloration.....	348
9.3.4	Effect of oxygenation on flavano-ellagitannins – The mongolicain story.....	351
9.3.4.1	Oxygen in wines – A few facts.....	351
9.3.4.2	Oxidative conversion of acutissimin A into mongolicain A.....	352
9.4	Conclusion and Perspectives.....	355
9.5	Bibliography.....	358
