

Contents

<i>Preface</i>	vii
Complex variables and potential theory	1
1. Integral representations in complex, hypercomplex and Clifford analysis	3
<i>H. Begehr</i>	
2. Nonlinear potential theory in metric spaces	29
<i>O. Martio</i>	
Differential equations and nonlinear analysis	61
3. An introduction to mean curvature flow	63
<i>G. Bellettini</i>	
4. Introduction to bifurcation theory	103
<i>P. Drábek</i>	
5. A nonlinear eigenvalue problem	175
<i>P. Lindqvist</i>	

6. Nonlinear elliptic equations with critical and supercritical Sobolev exponents	205
<i>D. Passaseo</i>	
7. Eigenvalue analysis of elliptic operators	227
<i>G. Rozenblum</i>	
8. A glimpse of the theory of nonlinear semigroups	257
<i>E. Vesentini</i>	
Harmonic analysis	279
9. Integral geometry and spectral analysis	281
<i>M. Agranovsky</i>	
10. Fourier analysis and geometric combinatorics	321
<i>A. Iosevich</i>	
11. Lectures on eigenfunctions of the Laplacian	337
<i>C. D. Sogge</i>	
12. Five lectures on harmonic analysis	361
<i>F. Soria</i>	
13. Fractal analysis, an approach via function spaces	413
<i>H. Triebel</i>	
<i>Author Index</i>	449
