<i>Preface</i>	vii
1. Introduction	1
2. Classical Physics	7
2.1 Newton's Laws . . . . .	7
2.1.1 Discrete Mechanics . . . . .	9
2.1.2 Continuum Mechanics . . . . .	13
2.1.3 Some Mathematics . . . . .	23
2.2 Statistical Physics . . . . .	25
2.2.1 Classical Statistical Mechanics . . . . .	26
2.2.2 Equipartition Theorem . . . . .	29
2.3 Electrodynamics . . . . .	31
2.3.1 Basic Principles . . . . .	32
2.3.2 Some Applications . . . . .	33
2.3.3 Maxwell's Equations . . . . .	36
2.3.4 Electromagnetic Radiation . . . . .	37
2.3.5 Source of Radiation . . . . .	39
3. Some Contradictions	41
3.1 Specific Heat of Solids . . . . .	41
3.2 Black-Body Radiation . . . . .	46
3.2.1 Planck's Hypothesis . . . . .	48
3.3 Specific Heat — Revisited . . . . .	51
3.3.1 Einstein Model . . . . .	51
3.3.2 Debye Model . . . . .	51

3.4	Photoelectric Effect . . . . .	52
3.4.1	Einstein's Analysis . . . . .	54
3.5	Compton Scattering . . . . .	55
3.6	Atomic Spectra . . . . .	57
3.6.1	Rutherford Atom . . . . .	58
3.6.2	Bohr Atom . . . . .	59
4.	Quantum Mechanics . . . . .	63
4.1	Matter Waves . . . . .	63
4.2	Davission-Germer Experiment . . . . .	65
4.3	Schrödinger Equation . . . . .	65
4.3.1	One-Dimensional Wave Equation . . . . .	66
4.3.2	Phase Velocity . . . . .	68
4.3.3	Group Velocity . . . . .	69
4.3.4	Interpretation . . . . .	70
4.3.5	Differential Equation . . . . .	71
4.3.6	More Mathematics . . . . .	72
4.3.7	Continuity Equation . . . . .	74
4.3.8	General Solution for Free Particle . . . . .	76
4.3.9	Interpretation (Continued) . . . . .	77
4.3.10	Include Forces . . . . .	79
4.3.11	Boundary Conditions . . . . .	80
4.3.12	Stationary States . . . . .	81
4.4	Solution to Some One-Dimensional Problems . . . . .	82
4.4.1	Particle in a One-Dimensional Box . . . . .	82
4.4.2	Potential Barrier in One-Dimension . . . . .	84
4.4.2.1	Scattering State . . . . .	85
4.4.2.2	Reflection and Transmission Coefficients . . . . .	87
4.4.3	Boundary Condition at a Wall . . . . .	90
4.4.4	Simple Harmonic Oscillator . . . . .	91
4.5	Three Dimensions . . . . .	92
4.5.1	Classical Continuum Mechanics . . . . .	93
4.5.2	Schrödinger Equation . . . . .	95
4.5.3	Particle in a Three-Dimensional Box . . . . .	96
4.5.4	Free Particle — Periodic Boundary Conditions . . . . .	97
4.6	Comments on the Structure of Quantum Mechanics . . . . .	98
4.7	Angular Momentum . . . . .	99
4.8	Point Coulomb Potential . . . . .	104
4.9	Spin . . . . .	106

4.10	Identical Particles . . . . .	109
4.10.1	Connection Between Spin and Statistics . . . . .	109
4.10.2	Non-interacting, Spin-1/2 Fermions ("Fermi Gas") . . . . .	109
4.10.3	Non-Interacting Bosons ("Bose Gas") . . . . .	114
4.10.4	Quantum Statistics ( $T \neq 0$ ) . . . . .	114
4.10.5	Wave Functions . . . . .	116
5.	Atomic Physics . . . . .	117
5.1	Vector Model for Addition of Angular Momenta . . . . .	117
5.1.1	Larmor's Theorem . . . . .	120
5.1.2	Effective Magnetic Moment . . . . .	121
5.2	Zeeman Effect . . . . .	122
5.3	Spin-Orbit Interaction . . . . .	123
5.4	Thomas-Fermi Theory . . . . .	125
5.4.1	Thomas-Fermi Equation . . . . .	125
5.4.2	Binding Energy of Atom . . . . .	131
5.4.3	Numerical Results . . . . .	133
5.5	Periodic System of the Elements . . . . .	136
5.5.1	Shielded Coulomb Potential . . . . .	136
5.5.2	Hartree Approximation . . . . .	137
5.5.3	Structure of the Single-Particle Levels . . . . .	138
5.5.4	Chemical Properties of the Elements . . . . .	141
6.	Nuclear Physics . . . . .	145
6.1	Baryons . . . . .	145
6.2	$\beta$ -decay . . . . .	147
6.3	Mean Life . . . . .	147
6.4	Deuteron . . . . .	148
6.5	Atomic Masses . . . . .	154
6.6	Light Nuclei . . . . .	156
6.7	Semi-Empirical Mass Formula . . . . .	157
6.7.1	Bulk Properties . . . . .	158
6.7.2	Surface Energy . . . . .	158
6.7.3	Coulomb Energy . . . . .	159
6.7.4	Symmetry Energy . . . . .	159
6.7.5	Pairing Energy . . . . .	159
6.7.6	Empirical Fit . . . . .	160

6.8	Electron Scattering . . . . .	162
6.8.1	Single-Slit Diffraction . . . . .	162
6.8.2	Electron Scattering from a Charge Distribution . . . . .	164
6.8.3	Nuclear Charge Distribution . . . . .	166
6.9	Nuclear Matter . . . . .	166
6.10	Shell Model . . . . .	168
6.10.1	A Simple Model . . . . .	169
6.10.2	More Realistic Model . . . . .	171
6.10.3	Spin-Orbit Interaction . . . . .	173
6.10.4	Nuclear Spins and Parities . . . . .	174
6.10.5	Schmidt Lines . . . . .	175
6.11	$\gamma$ -Decay . . . . .	177
7.	Particle Physics . . . . .	181
7.1	Forces . . . . .	181
7.2	Particles . . . . .	182
7.2.1	Electric Charge . . . . .	182
7.3	Hadrons . . . . .	182
7.3.1	Baryon Number . . . . .	182
7.3.2	Strangeness . . . . .	182
7.3.3	Isospin . . . . .	183
7.3.4	Charm . . . . .	187
7.4	Yukawa Interaction . . . . .	188
7.5	Leptons . . . . .	191
7.6	Antiparticles . . . . .	193
7.7	Feynman Diagrams . . . . .	194
7.8	$S$ -matrix . . . . .	194
7.8.1	Transition Rate . . . . .	195
7.8.2	Cross Section . . . . .	197
7.9	Feynman Diagrams (Continued) . . . . .	198
7.10	Quantum Electrodynamics (QED) . . . . .	199
7.10.1	$\mu$ - $e$ Scattering . . . . .	199
7.10.2	Anomalous Magnetic Moment of Electron . . . . .	200
7.11	Quarks . . . . .	201
7.11.1	Nuclear Domain . . . . .	204
7.11.2	Some Applications . . . . .	206
7.12	Quantum Chromodynamics (QCD) . . . . .	208
7.13	Standard Model of Electroweak Interactions . . . . .	211

8. Special Relativity	213
8.1 Michelson-Morley Experiment . . . . .	213
8.2 Lorentz Transformation . . . . .	217
8.3 Einstein's Theory . . . . .	218
8.4 Time Dilation . . . . .	221
8.5 Lorentz Contraction . . . . .	222
8.6 Transverse Dimension . . . . .	223
8.7 Minkowski Space . . . . .	225
8.8 Four-Vectors . . . . .	230
8.9 Some Applications . . . . .	233
8.9.1 Relativistic Kinematics . . . . .	233
8.9.2 White Dwarf Stars . . . . .	239
9. Relativistic Quantum Mechanics	245
9.1 The Dirac Equation . . . . .	245
9.1.1 Non-Relativistic Reduction . . . . .	250
9.1.2 Electromagnetic Current . . . . .	252
9.1.3 Covariant Form . . . . .	252
9.1.4 Dirac Hole Theory . . . . .	253
9.1.5 Electromagnetic Interactions . . . . .	254
9.2 Quantum Electrodynamics (QED) . . . . .	255
9.3 Weak Interactions . . . . .	259
9.4 Quantum Chromodynamics (QCD) . . . . .	262
10. General Relativity	265
10.1 Motion on a Two-Dimensional Surface . . . . .	265
10.2 Equivalence Principle . . . . .	268
10.3 Local Freely Falling Frame ( $LF^3$ ) . . . . .	271
10.4 Special Relativity . . . . .	272
10.5 Einstein's Theory of General Relativity . . . . .	272
10.6 Schwarzschild Solution . . . . .	274
10.6.1 Interpretation . . . . .	274
10.6.2 Some Applications . . . . .	276
10.6.3 Schwarzschild Radius . . . . .	277
10.6.4 Motion of a Point Mass . . . . .	279
10.7 Cosmology . . . . .	281
10.7.1 Robertson-Walker Metric ( $k = 0$ ) . . . . .	281
10.7.2 Interpretation . . . . .	283

10.7.3	Horizon . . . . .	285
11.	Quantum Fluids . . . . .	287
11.1	Superfluid $^4\text{He}$ . . . . .	287
11.1.1	Hartree Approximation . . . . .	289
11.1.2	Velocity Field . . . . .	290
11.1.3	Quantized Circulation . . . . .	291
11.1.4	Gross-Pitaevskii Equation . . . . .	292
11.1.5	Vortex . . . . .	293
11.1.6	Superfluidity . . . . .	296
11.2	Superconductivity . . . . .	298
11.2.1	Experimental Properties . . . . .	299
11.2.2	Some Observations . . . . .	300
11.2.3	Cooper Pairs . . . . .	301
11.2.4	Flux Quantization . . . . .	308
12.	Quantum Fields . . . . .	311
12.1	String . . . . .	311
12.1.1	Energy . . . . .	311
12.1.2	Normal Modes . . . . .	312
12.1.3	Quantization . . . . .	315
12.1.4	The Quantum Field . . . . .	317
12.2	Electromagnetic Field . . . . .	318
12.2.1	Normal Modes . . . . .	318
12.2.2	Quantization . . . . .	321
12.2.3	Stimulated Emission . . . . .	321
12.3	Dirac Field . . . . .	322
12.3.1	Anticommutation Relations . . . . .	322
12.3.2	Dirac Field . . . . .	323
12.3.3	Some Applications . . . . .	323
12.4	Many-Particle Systems . . . . .	325
13.	Problems . . . . .	327
Appendix A	Complex Variables—A Primer . . . . .	391
Appendix B	Matrices . . . . .	395

Appendix C	Fourier Series and Fourier Integrals	401
Appendix D	Some Thermodynamics	405
Appendix E	Some Statistical Mechanics	409
Appendix F	Some Vector Calculus	419
Appendix G	Black-Body Flux	423
Appendix H	Wave Functions for Identical Particles	425
H.1	Bosons . . . . .	426
H.2	Fermions . . . . .	427
H.3	Some Applications . . . . .	431
Appendix I	Transition Rate	435
Appendix J	Neutrino Mixing	443
Appendix K	Units	447
K.1	Standard International (SI) . . . . .	447
K.2	Heaviside-Lorentz (rationalized cgs) . . . . .	448
K.3	cgs . . . . .	449
Appendix L	Fundamental Constants	451
L.1	Conversion Factors . . . . .	452
Appendix M	Some Significant Names for Theoretical Physics	453
	<i>Bibliography</i>	455
	<i>Index</i>	461
