<i>Preface</i>	v
<i>Acknowledgments</i>	xiii
1. Introduction	1
1.1 Critical exponents of equilibrium (thermal) systems . . .	1
1.2 Static percolation cluster exponents . . . . .	2
1.3 Dynamical critical exponents . . . . .	4
1.4 Crossover between classes . . . . .	9
1.5 Critical exponents and relations of spreading processes . .	10
1.5.1 Damage spreading exponents . . . . .	12
1.6 Field theoretical approach to reaction-diffusion systems .	13
1.6.1 Classification scheme of one-component, bosonic RD models, with short ranged interactions and memory . . . . .	17
1.6.2 Ageing and local scale invariance (LSI) . . . . .	20
1.7 The effect of disorder . . . . .	23
2. Out of Equilibrium Classes	27
2.1 Field theoretical description of dynamical classes at and below $T_c$ . . . . .	27
2.2 Dynamical classes at $T_c > 0$ . . . . .	30
2.3 Ising classes . . . . .	31
2.3.1 Correlated percolation clusters at $T_C$ . . . . .	32
2.3.2 Dynamical Ising classes . . . . .	33
2.3.3 Competing dynamics added to spin-flip . . . . .	37
2.3.4 Competing dynamics added to spin-exchange . . .	40

2.3.5	Long-range interactions and correlations . . . . .	40
2.3.6	Damage spreading behavior . . . . .	41
2.3.7	Disordered Ising classes . . . . .	41
2.4	Potts classes . . . . .	45
2.4.1	Correlated percolation at $T_c$ . . . . .	46
2.4.2	The vector Potts (clock) model . . . . .	47
2.4.3	Dynamical Potts classes . . . . .	47
2.4.4	Long-range interactions . . . . .	49
2.5	XY model classes . . . . .	49
2.5.1	Long-range correlations . . . . .	51
2.6	$O(N)$ symmetric model classes . . . . .	52
2.6.1	Correlated percolation at $T_c$ . . . . .	53
2.6.2	Disordered $O(N)$ classes . . . . .	54
3.	Genuine Basic Nonequilibrium Classes with Fluctuating Ordered States . . . . .	55
3.1	Driven lattice gas (DLG) classes . . . . .	55
3.1.1	Driven lattice gas model in two-dimensional (DDS) . . . . .	56
3.1.2	Driven lattice gas model in one-dimensional (ASEP, ZRP) . . . . .	57
3.1.3	Driven lattice gas with disorder . . . . .	62
3.1.4	Critical behavior of self-propelled particles . . . . .	63
4.	Genuine Basic Nonequilibrium Classes with Absorbing State . . . . .	65
4.1	Mean-field classes of general $nA \rightarrow (n+k)A$ , $mA \rightarrow (m-l)A$ processes . . . . .	67
4.1.1	Bosonic models . . . . .	68
4.1.2	Site restricted (fermionic) models . . . . .	68
4.1.3	The $n = m$ symmetric case . . . . .	69
4.1.4	The $n > m$ asymmetric case . . . . .	70
4.1.5	The asymmetric $n < m$ case . . . . .	71
4.1.6	Upper critical behavior and below . . . . .	72
4.2	Directed percolation (DP) classes . . . . .	73
4.2.1	The contact process . . . . .	81
4.2.2	Two-point correlations, ageing properties . . . . .	82
4.2.3	DP-class stochastic cellular automata . . . . .	83
4.2.4	Branching and annihilating random walks with odd number of offspring . . . . .	87

4.2.5	DP with spatial boundary conditions . . . . .	87
4.2.6	DP with mixed (parabolic) boundary conditions . . . . .	91
4.2.7	Lévy flight anomalous diffusion in DP . . . . .	91
4.2.8	Long-range correlated initial conditions in DP . . . . .	93
4.2.9	Anisotropic DP systems . . . . .	95
4.2.10	Quench disordered DP classes . . . . .	95
4.3	Generalized, $n$ -particle contact processes . . . . .	99
4.4	Dynamical isotropic percolation (DIP) classes . . . . .	103
4.4.1	Static isotropic percolation universality classes . . . . .	104
4.4.2	DIP with spatial boundary conditions . . . . .	106
4.4.3	Lévy flight anomalous diffusion in DIP . . . . .	106
4.5	Voter model (VM) classes . . . . .	107
4.5.1	The $2A \rightarrow \emptyset$ (ARW) and the $2A \rightarrow A$ models . . . . .	109
4.5.2	Compact DP (CDP) with spatial boundary conditions . . . . .	111
4.5.3	CDP with parabolic boundary conditions . . . . .	111
4.5.4	Lévy flight anomalous diffusion in ARW-s . . . . .	112
4.5.5	ARW with anisotropy . . . . .	114
4.5.6	ARW with quenched disorder . . . . .	115
4.6	Parity conserving (PC) classes . . . . .	116
4.6.1	Branching and annihilating random walks with even number of offspring (BARWe) . . . . .	117
4.6.2	The NEKIM model . . . . .	122
4.6.3	Parity conserving, stochastic cellular automata . . . . .	127
4.6.4	PC class surface catalytic models . . . . .	129
4.6.5	Long-range correlated initial conditions . . . . .	132
4.6.6	Spatial boundary conditions . . . . .	133
4.6.7	BARWe with long-range interactions . . . . .	136
4.6.8	Parity conserving NEKIMCA with quenched disorder . . . . .	137
4.6.9	Anisotropic PC systems . . . . .	140
4.7	Classes in models with $n < m$ production and $m$ particle annihilation at $\sigma_c = 0$ . . . . .	143
4.8	Classes in models with $n < m$ production and $m$ particle coagulation at $\sigma_c = 0$ ; reversible reactions (1R) . . . . .	146
4.9	Generalized PC models . . . . .	150
4.10	Multiplicative noise classes . . . . .	152
5.	Scaling at First-Order Phase Transitions . . . . .	155

5.1	Tricritical directed percolation classes (TDP) . . . . .	159
5.2	Tricritical DIP classes . . . . .	163
6.	Universality Classes of Multi-Component Systems . . . . .	165
6.1	The $A + B \rightarrow \emptyset$ classes . . . . .	165
6.1.1	Reversible $A + A \rightleftharpoons C$ and $A + B \rightleftharpoons C$ class . . . . .	167
6.1.2	Anisotropic $A + B \rightarrow \emptyset$ . . . . .	168
6.1.3	Disordered $A + B \rightarrow \emptyset$ models . . . . .	169
6.2	$AA \rightarrow \emptyset$ , $BB \rightarrow \emptyset$ with hard-core exclusion . . . . .	169
6.3	Symmetrical, multi-species $A_i + A_j \rightarrow \emptyset$ (q-MAM) classes . . . . .	171
6.4	Heterogeneous, multi-species $A_i + A_j \rightarrow \emptyset$ system . . . . .	173
6.5	Unidirectionally coupled ARW classes . . . . .	175
6.6	DP coupled to frozen field classes . . . . .	176
6.6.1	The pair contact process (PCP) model . . . . .	178
6.6.2	The threshold transfer process (TTP) . . . . .	180
6.7	DP with coupled diffusive field classes . . . . .	182
6.7.1	The PCPD model . . . . .	184
6.7.2	Cyclically coupled spreading with pair annihilation . . . . .	188
6.7.3	The parity conserving annihilation-fission model . . . . .	188
6.7.4	The driven PCPD model . . . . .	189
6.8	BARWe with coupled non-diffusive field class . . . . .	190
6.9	DP with diffusive, conserved slave field classes . . . . .	190
6.10	DP with frozen, conserved slave field classes . . . . .	193
6.10.1	Realizations of NDCF classes, SOC models . . . . .	195
6.10.2	NDCF with anisotropy . . . . .	199
6.10.3	NDCF with spatial boundary conditions . . . . .	199
6.11	Coupled $N$ -component DP classes . . . . .	200
6.12	Coupled $N$ -component BARW2 classes . . . . .	200
6.12.1	Generalized contact processes with $n > 2$ absorbing states in one dimension . . . . .	202
6.13	Hard-core 2-BARW2 classes in one dimension . . . . .	203
6.13.1	Hard-core 2-BARWo models in one dimension . . . . .	204
6.13.2	Coupled binary spreading processes . . . . .	205
7.	Surface-Interface Growth Classes . . . . .	209
7.1	The random deposition class . . . . .	212

7.2	Edwards-Wilkinson (EW) classes . . . . .	213
7.3	Quench disordered EW classes (QEW) . . . . .	213
7.3.1	EW classes with boundaries . . . . .	214
7.4	Kardar-Parisi-Zhang (KPZ) classes . . . . .	216
7.4.1	KPZ with anisotropy . . . . .	218
7.4.2	The Kuramoto-Sivashinsky (KS) Equation . . . . .	219
7.4.3	Quench disordered KPZ (QKPZ) classes . . . . .	220
7.4.4	KPZ classes with boundaries . . . . .	221
7.5	Other continuum growth classes . . . . .	223
7.5.1	Molecular beam epitaxy classes (MBE) . . . . .	223
7.5.2	The Bradley-Harper (BH) model . . . . .	225
7.5.3	Classes of mass adsorption-desorption aggregation and chipping models (SOC) . . . . .	225
7.6	Unidirectionally coupled DP classes . . . . .	229
7.6.1	Monomer adsorption-desorption at terraces . . . . .	230
7.7	Unidirectionally coupled PC classes . . . . .	232
7.7.1	Dimer adsorption-desorption at terraces . . . . .	233
8.	Summary and Outlook . . . . .	239
	<i>Appendix</i> . . . . .	245
	<i>Bibliography</i> . . . . .	249
