Introduction by C. N. Yang	v
Preface	ix
COMMENTARIES	1
1. Dimer Statistics	
Introduction	3
The pfaffian approach	4
The rectangular lattice	5
Rectangular lattice with a boundary vacancy	7
The honeycomb and kagome lattices	8
Solution of a three-dimensional dimer model	8
Remarks	9
References for Chapter 1	9
2. The Vertex Model	
Introduction	11
The eight-vertex model (rectangular lattice)	12
The five-vertex model (rectangular lattice)	14
The eight-vertex model (honeycomb lattice)	15
Vertex models in higher dimensions	16
Remarks	17
References for Chapter 2	18
3. Duality and Gauge Transformations	
Introduction	20
Duality relation for the Potts and the chiral Potts models	20
Gauge transformation for the vertex model and syzygies	22
Duality relation for frustrated spin systems	23
Duality relation for Potts correlation functions	23
References for Chapter 3	25

4. The Ising Model	
Introduction	27
Ising representation of the eight-vertex model	27
The Baxter-Wu model	28
Density of Fisher zeroes	28
Solution of the Ising model on nonorientable surfaces	30
Remarks	31
References for Chapter 4	31
5. The Potts Model	
Introduction	33
Graphical formulation of the Potts model	34
Rigorous determination of the Potts critical point	35
Potts partition function zeroes	36
Remarks	36
References for Chapter 5	37
6. Critical Frontiers	
Introduction	38
The Potts model	38
The antiferromagnetic Ising model in a magnetic field	39
The Blume-Emery-Griffiths model	40
The Ashkin-Teller model	41
The $O(n)$ model	42
Remarks	43
References for Chapter 6	43
7. Percolation	
Introduction	45
The random-cluster model and the Potts model	46
Percolation thresholds	47
An infinite-range bond percolation	47
Directed percolation	47
Remarks	48
References for Chapter 7	49
8. Graph Theory	
Introduction	50
Graphical analyses in many-body theory	50
The Potts model and the Tutte polynomial	51

Random graphs	53
Spanning trees	53
Graphical analysis of lattice models	54
References for Chapter 8	55
9. Knot Invariants	
Introduction	57
Lattice models and knot invariants	57
Two new knot invariants	58
Knot invariants from spin models	59
Bracket polynomial and the nonintersecting string model	60
Remarks	61
References for Chapter 9	62
10. Other Topics	
Theory of electrical circuits	63
Quantization of the orbital angular momentum	65
The vicious neighbor problem	65
Restricted partitions of an integer	66
The Hubbard model	67
Review of a book by Ta-You Wu	68
Eulogy on Shang-Keng Ma	68
Professor C. N. Yang and statistical mechanics	69
References for Chapter 10	69
Photographs	71
Reprinted Papers	83
REPRINTED PAPERS	
1. Dimer Statistics	85
P1 Exactly Soluble Model of the Ferroelectric Phase Transition in Two Dimensions	87
F. Y. Wu	
P2 Dimers on Two-Dimensional Lattices	90
F. Y. Wu	
P3 Close-Packed Dimers on Nonorientable Surfaces	105
W. T. Lu and F. Y. Wu	

P4	Pfaffian Solution of a Dimer-Monomer Problem: Single Monomer on the Boundary F. Y. Wu	117
P5	Remarks on the Modified Potassium Dihydrogen Phosphate Model of a Ferroelectric F. Y. Wu	121
P6	Exact Solution of Close-Packed Dimers on the Kagomé Lattice F. Wang and F. Y. Wu	126
P7	Exact Solution of a Three-Dimensional Dimer System H. Y. Huang, V. Popkov and F. Y. Wu	130
2. The Vertex Model		135
P8	General Lattice Model of Phase Transitions C. Fan and F. Y. Wu	137
P9	Staggered Ice-Rule Model: The Pfaffian Solution F. Y. Wu and K. Y. Lin	148
P10	Staggered Eight-Vertex Model C. S. Hsue, K. Y. Lin and F. Y. Wu	158
P11	The Odd Eight-Vertex Model F. Y. Wu and H. Kunz	167
P12	Eight-Vertex Model on the Honeycomb Lattice F. Y. Wu	179
P13	Eight-Vertex Model and Ising Model in a Non-zero Magnetic Field: Honeycomb Lattice F. Y. Wu	184
P14	Phase Transition in a Vertex Model in Three Dimensions F. Y. Wu	188
P15	Exact Solution of a Vertex Model in d Dimensions F. Y. Wu and H. Y. Huang	192
3. Duality and Gauge Transformations		201
P16	Duality Transformation in a Many-Component Spin Model F. Y. Wu and Y. K. Wang	203

P17 Duality Properties of a General Vertex Model X. N. Wu and F. Y. Wu	205
P18 Algebraic Invariants of the $O(2)$ Gauge Transformation J. H. H. Perk, F. Y. Wu and X. N. Wu	211
P19 The $O(3)$ Gauge Transformation and 3-state Vertex Models L. H. Gwa and F. Y. Wu	216
P20 Duality Relation for Frustrated Spin Models D. H. Lee and F. Y. Wu	221
P21 Duality Relations for Potts Correlation Functions F. Y. Wu	226
P22 Sum Rule Identities and the Duality Relation for the Potts n -Point Boundary Correlation Function F. Y. Wu and H. Y. Huang	231
4. The Ising Model	235
P23 Ising Model with Four-Spin Interactions F. Y. Wu	237
P24 Exact Solution of an Ising Model with Three-spin Interactions on a Triangular Lattice R. J. Baxter and F. Y. Wu	240
P25 Density of the Fisher Zeroes for the Ising Model W. T. Lu and F. Y. Wu	244
P26 Ising Model on Nonorientable Surfaces: Exact Solution for the Möbius Strip and the Klein Bottle W. T. Lu and F. Y. Wu	262
5. The Potts Model	271
P27 Equivalence of the Potts Model or Whitney Polynomial with an Ice-Type Model R. J. Baxter, S. B. Kelland and F. Y. Wu	273
P28 The Potts Model F. Y. Wu	283
P29 Potts Model of Magnetism (Invited) F. Y. Wu	317

P30 Exact Results for the Potts Model in Two Dimensions A. Hintermann, H. Kunz and F. Y. Wu	322
P31 Partition Function Zeros of the Square Lattice Potts Model C. N. Chen, C. K. Hu and F. Y. Wu	332
6. Critical Frontiers	337
P32 Critical Point of Planar Potts Models F. Y. Wu	339
P33 New Critical Frontiers for the Potts and Percolation Models F. Y. Wu	345
P34 Critical Frontier of the Antiferromagnetic Ising Model in a Magnetic Field: The Honeycomb Lattice F. Y. Wu, X. N. Wu and H. W. J. Blöte	349
P35 Critical Surface of the Blume-Emery-Griffiths Model on the Honeycomb Lattice L. H. Gwa and F. Y. Wu	353
P36 Two Phase Transitions in the Ashkin-Teller Model F. Y. Wu and K. Y. Lin	356
7. Percolation	361
P37 Percolation and the Potts Model F. Y. Wu	363
P38 An Infinite-Range Bond Percolation F. Y. Wu	372
P39 Domany-Kinzel Model of Directed Percolation: Formulation as a Random-Walk Problem and Some Exact Results F. Y. Wu and H. E. Stanley	373
8. Graph Theory	377
P40 Cluster Development in an N -Body Problem F. Y. Wu	379
P41 Potts Model and Graph Theory F. Y. Wu	385

P42 On the Rooted Tutte Polynomial F. Y. Wu, C. King and W. T. Lu	399
P43 Random Graphs and Network Communication F. Y. Wu	411
P44 Spanning Trees on Hypercubic Lattices and Nonorientable Surfaces W. J. Tzeng and F. Y. Wu	415
P45 On the Triangular Potts Model with Two- and Three-Site Interactions F. Y. Wu and K. Y. Lin	422
P46 Nonintersecting String Model and Graphical Approach: Equivalence with a Potts Model F. Y. Wu and J. H. H. Perk	430
9. Knot Invariants	447
P47 Knot Theory and Statistical Mechanics F. Y. Wu	449
P48 New Link Invariant from the Chiral Potts Model F. Y. Wu, P. Pant and C. King	482
10. Other Topics	487
P49 Theory of Resistor Networks: The Two-Point Resistance F. Y. Wu	489
P50 On the Eigenvalues of Orbital Angular Momentum D. M. Kaplan and F. Y. Wu	510
P51 The Vicious Neighbour Problem R. Tao and F. Y. Wu	513
P52 Directed Compact Lattice Animals, Restricted Partitions of an Integer, and the Infinite-State Potts Model F. Y. Wu, G. Rollet, H. Y. Huang, J.-M. Maillard, C. K. Hu and C. N. Chen	521
P53 The Infinite-State Potts Model and Solid Partitions of an Integer H. Y. Huang and F. Y. Wu	525

P54	Absence of Mott Transition in an Exact Solution of the Short-Range, One-Band Model in One Dimension E. H. Lieb and F. Y. Wu	531
P55	The One-Dimensional Hubbard Model: A Reminiscence E. H. Lieb and F. Y. Wu	535
P56	Book Review: Lectures on the Kinetic Theory of Gases, Non-Equilibrium Thermodynamics and Statistical Theories A. Widom and F. Y. Wu	562
P57	In Memorial of Sheng-Keng Ma F. Y. Wu	566
P58	Professor C. N. Yang and Statistical Mechanics F. Y. Wu	569
	APPENDIX	581
	Research Summary	
	A Challenge in Enumerative Combinatorics: The Graph of Contributions of Professor Fa-Yueh Wu Review of F. Y. Wu's Research by J.-M. Maillard	583
	Fa Yueh Wu: Vita	635
	Index of Names in the Commentaries	639
