<i>Preface</i>	vii
<i>Synopsis</i>	xi
<i>Notation and Conventions</i>	xv
1. Classical Field Theory	1
1.1 One-Dimensional Crystal	1
1.2 Action Principle	2
1.3 Noether's Theorem	3
1.4 Nonrelativistic Field Theory	7
1.5 Spontaneously Broken Symmetries	11
1.6 Effective Theory of Hydrodynamics	14
1.7 Sound Waves	16
1.8 Topological Defects	19
1.9 Homotopy Groups	21
1.10 Quantized Vortices	26
1.11 Villain Vector Potential	27
2. Quantum Field Theory	31
2.1 Quantum Statistical Mechanics	31
2.2 Finite-Temperature Field Theory	36
2.3 Functional Integrals	38
2.4 Feynman Propagator	42
2.5 Feynman Diagrams	47
2.6 Connected Green Functions	53
2.7 Effective Action	55

2.8	Linear Response Theory	59
2.9	Ward Identities	64
3.	Calculation Tools	67
3.1	Derivative Expansion	67
3.2	Free Electron Gas in an External Magnetic Field	69
3.3	Goldstone-Wilczek Currents	71
3.4	Optical Phonons	75
3.5	Geometric Phase	77
3.6	Monopole Action	81
3.7	Wess-Zumino Terms	84
3.8	Landau-Levels Technique	86
3.9	Magnetic Susceptibility of an Electron Gas	91
4.	Bose-Einstein Condensation	95
4.1	Ideal Bose Gas	95
4.2	Critical Properties	97
4.3	Ideal Bose Gas in a Harmonic Trap	100
4.4	Gross-Pitaevskii Theory	102
4.5	Bogoliubov Theory	104
4.6	Renormalization	106
4.7	One-Loop Corrections	110
4.8	Phonon Decay	114
4.9	Effective Theory	115
4.10	Finite Temperature	120
4.11	Large- N Expansion	128
4.12	Two-Fluid Model	132
4.13	Impurities	136
4.14	Bose-Hubbard Model	138
5.	Vortices in 2D	147
5.1	Vortex Dynamics	147
5.2	2D Coulomb Gas	153
5.3	Berezinskii-Kosterlitz-Thouless Transition	155
5.4	Sine-Gordon Model	159
5.5	Superfluid ^4He Films	163
5.6	Duality	165

6. Fermi Gases	169
6.1 Interacting Fermi Gas	169
6.2 Impurities	172
6.3 Conductivity	175
6.4 Kondo Effect	179
6.5 Degenerate Electron Gas	183
6.6 Thermodynamic Potential	190
6.7 Self-Energy	194
7. Magnetic Order in Fermi Systems	197
7.1 Hubbard Model	197
7.2 Ferromagnetic State	201
7.3 Ferromagnetic Spin Waves	203
7.4 Antiferromagnetic State	207
7.5 Antiferromagnetic Spin Waves	210
8. Superconductivity	213
8.1 BCS Theory	213
8.2 Gap Equation	214
8.3 Anderson-Bogoliubov Mode	218
8.4 Linear Response	221
8.5 Flux Quantization	223
8.6 Plasma Mode	224
8.7 Josephson Effect	225
8.8 Effective Potential	227
8.9 Effective Action	228
8.10 Ginzburg-Landau Theory	229
8.11 Condensation Energy	234
8.12 Ginzburg Region	236
8.13 Magnetic Vortices	238
8.14 Mixed State	243
8.15 Gapless Superconductivity	246
9. Duality	253
9.1 Superconducting Films	253
9.2 Bosonization	259
9.3 Chiral Anomaly	263
9.4 Fermion Condensate	265

9.5	Index Theorem	268
9.6	θ Vacuum	271
9.7	Massive Schwinger Model	275
9.8	Peierls Instability	277
9.9	Fractional Charge	281
10.	From BCS to BEC	285
10.1	Composite Boson Limit	285
10.2	Ultracold Fermi Gases	288
10.3	Derivative Expansion	289
10.4	Quantum Phase Transitions	292
10.5	Superconductor-Insulator Transition	294
11.	Superfluid ^3He	299
11.1	P-State Triplet Pairing	299
11.2	Phase Diagram	304
11.3	Fermionic Excitations	307
11.4	Boojums	310
11.5	Callan-Harvey Effect	313
11.6	Wess-Zumino Term	318
11.7	Topological Defects	321
12.	Quantum Hall Effect	327
12.1	2D Electron Gas in a Strong Magnetic Field	328
12.2	Many-Particle Wave Function	331
12.3	Fluxons	335
12.4	IQHE	338
12.5	Laughlin Wave Function	340
12.6	Composite Fermions	341
12.7	Fractional Charge	343
12.8	Near $\nu = 1/2$	344
12.9	Aharonov-Bohm Effect	346
12.10	Chern-Simons Theory	347
12.11	Graphene	350
	<i>Bibliography</i>	357
	<i>Author Index</i>	373
	<i>Index</i>	379
