<i>Preface</i>	v
<i>Contributors</i>	vii
<i>List of People Involved in the FIRB Project</i>	xi
1. The CNN Paradigm for Complexity	1
1.1 Introduction	1
1.2 The 3D-CNN Model	3
1.3 E ³ : An Universal Emulator for Complex Systems	9
1.4 Emergence of Forms in 3D-CNNs	12
1.4.1 Initial conditions	13
1.4.2 3D waves in homogeneous and unhomogeneous media	14
1.4.3 Chua's circuit	16
1.4.4 Lorenz system	17
1.4.5 Rössler system	20
1.4.6 FitzHugh-Nagumo neuron model	20
1.4.7 Hindmarsh-Rose neuron model	21
1.4.8 Inferior-Olive neuron model	22
1.4.9 Izhikevich neuron model	26
1.4.10 Neuron model exhibiting homoclinic chaos	27
1.5 Conclusions	29
2. Emergent Phenomena in Neuroscience	39
2.1 Introductory Material: Neurons and Models	39
2.1.1 Models of excitability	40

2.1.2	The Hodgkin-Huxley model	41
2.1.3	The FitzHugh-Nagumo model	42
2.1.4	Class I and class II excitability	43
2.1.5	Other neuron models	44
2.2	Electronic Implementation of Neuron Models	46
2.2.1	Implementation of single cell neuron dynamics	47
2.2.2	Implementation of systems with many neurons	49
2.3	Local Activity Theory for Systems of IO Neurons	54
2.3.1	The theory of local activity for one-port and two-port systems	55
2.3.2	The local activity and the edge of chaos regions of the inferior olive neuron	56
2.4	Simulation of IO Systems: Emerging Results	58
2.4.1	The paradigm of local active wave computation for image processing	58
2.4.2	Local active wave computation based paradigm: 3D-shape processing	60
2.5	Networks of HR Neurons	63
2.5.1	The neural model	64
2.5.2	Parameters for dynamical analysis	66
2.5.3	Dynamical effects of topology on synchronization	68
2.6	Neurons in Presence of Noise	72
2.7	Conclusions	79
3.	Frequency Analysis and Identification in Atomic Force Microscopy	83
3.1	Introduction	83
3.2	AFM Modeling	85
3.2.1	Piecewise interaction force	88
3.2.2	Lennard Jones-like interaction force	88
3.3	Frequency Analysis via Harmonic Balance	89
3.3.1	Piecewise interaction model analysis	91
3.3.2	Lennard Jones-like hysteretic model analysis	93
3.4	Identification of the Tip-Sample Force Model	95
3.4.1	Identification method	95
3.4.2	Experimental results	98
3.5	Conclusions	98

4.	Control and Parameter Estimation of Systems with Low-Dimensional Chaos – The Role of Peak-to-Peak Dynamics	101
4.1	Introduction	101
4.2	Peak-to-Peak Dynamics	102
4.3	Control System Design	105
4.3.1	PPD modeling and control	106
4.3.2	The impact of noise and sampling frequency	109
4.3.3	PPD reconstruction	110
4.4	Parameter Estimation	115
4.4.1	Derivation of the “empirical PPP”	116
4.4.2	Interpolation of the “empirical PPP”	117
4.4.3	Optimization	117
4.4.4	Example of application	118
4.5	Concluding Remarks	121
5.	Synchronization of Complex Networks	123
5.1	Introduction	123
5.2	Synchronization of Interacting Oscillators	123
5.3	From Local to Long-Range Connections	125
5.4	The Master Stability Function	126
5.4.1	The case of continuous time systems	126
5.4.2	The Master stability function for coupled maps	131
5.5	Key Elements for the Assessing of Synchronizability	132
5.5.1	Bounding the eigenratio $\frac{\lambda_N}{\lambda_2}$	133
5.5.2	Other approaches for assessing synchronizability	134
5.6	Synchronizability of Weighted Networks	135
5.6.1	Coupling matrices with a real spectra	135
5.6.2	Numerical simulations	137
5.6.3	Weighting: local <i>vs</i> global approaches	139
5.6.4	Coupling matrices with a complex spectra	140
5.6.5	Essential topological features for synchronizability	143
5.7	Synchronization of Coupled Oscillators: Some Significant Results	145
5.7.1	Networks of phase oscillators	145
5.7.2	Networks of coupled oscillators	148
5.8	Conclusions	151

6.	Economic Sector Identification in a Set of Stocks Traded at the New York Exchange: A Comparative Analysis	159
6.1	Introduction	159
6.2	The Data Set	161
6.3	Random Matrix Theory	162
6.4	Hierarchical Clustering Methods	165
6.4.1	Single linkage correlation based clustering	166
6.4.2	Average linkage correlation based clustering	169
6.5	The Planar Maximally Filtered Graph	174
6.6	Conclusions	178
7.	Innovation Systems by Nonlinear Networks	181
7.1	Introduction	181
7.2	Cellular Automata Model	183
7.3	Innovation Models Based on CNNs	184
7.4	Simulation Results	186
7.5	Conclusions	187
	<i>Index</i>	189
