FOREWORD	vii
ACKNOWLEDGMENTS	viii
OPENING ADDRESS <i>W.G. Padolina</i>	ix
Overview	
Rice genetics from Mendel to functional genomics <i>G.S. Khush and D.S. Brar</i>	3
Application of Mendelian genetics in rice breeding <i>J.N. Rutger and D.J. Mackill</i>	27
The Rockefeller Foundation's International Program on Rice Biotechnology <i>J.C. O'Toole, G.H. Toenniessen, T. Murashige, R.R. Harris, and R.W. Herdt</i>	39
Molecular markers, genetic diversity, and evolution	
Evolution and domestication of rice <i>H. Morishima</i>	63
Rice: a central genome for the genetics of all cereals <i>M. Gale, G. Moore, and K. Devos</i>	79
Phylogeny of the genus <i>Oryza</i> as revealed by molecular approaches <i>Song Ge, Tao Sang, Bao-Rong Lu, and De-Yuan Hong</i>	89
Miniature inverted repeat transposable elements help create genomic diversity in maize and rice <i>S.R. Wessler, A. Nagel, and A. Casa</i>	107
Microsatellite markers in rice: abundance, diversity, and applications <i>S.R. McCouch, S. Temnykh, A. Lukashova, J. Coburn, G. DeClerck, S. Cartinhour, S. Harrington, M. Thomson, E. Septiningsih, M. Semon, P. Moncada, and Jiming Li</i>	117
Molecular mapping and marker-assisted selection for major-gene traits in rice <i>D.J. Mackill and Junjian Ni</i>	137

QTL mapping in rice: a few critical considerations <i>Zhi-Kang Li</i>	153
Genetic and molecular basis of heterosis in rice <i>Qifa Zhang, Jinping Hua, Sibin Yu, Lizhong Xiong, and Caiguo Xu</i>	173
Structural and functional genomics	
The International Rice Genome Sequencing Project: progress and prospects <i>T. Sasaki, T. Matsumoto, T. Baba, K. Yamamoto, J. Wu, Y. Katayose, and K. Sakata</i>	189
Strategies and techniques for finishing genomic sequence <i>M. de la Bastide, D. Johnson, V. Balija, and W.R. McCombie</i>	197
Sequence-tagged connector/DNA fingerprint framework for rice genome sequencing <i>R.A. Wing, Yeisoo Yu, G. Presting, D. Frisch, T. Wood, Sung-Sick Woo, M. Arief Budiman, Long Mao, Hye Ran Kim, T. Rambo, E. Fang, B. Blackmon, J.L. Goicoechea, S. Higingbottom, M. Sasinowski, J. Tomkins, R.A. Dean, C. Soderlund, W.R. McCombie, R. Martienssen, M. de la Bastide, R. Wilson, and D. Johnson</i>	215
Naturally occurring allelic variations as a new resource for functional genomics in rice <i>M. Yan</i>	227
Deletion mutants for functional genomics: progress in phenotyping, sequence assignment, and database development <i>H. Leung, C. Wu, M. Baraoidan, A. Bordeos, M. Ramos, S. Madamba, P. Cabauatan, C. Vera Cruz, A. Portugal, G. Reyes, R. Bruskiwich, G. McLaren, R. Lafitte, G. Gregorio, 239J. Bennett, D. Brar, G. Khush, P. Schnable, G. Wang, and J. Leach</i>	239
Generation of T-DNA insertional tagging lines in rice <i>Gynheung An, Jong-Seong Jeon, Sichul Lee, Ki-Hong Jung, Sung-Hoon Jun, Dong-Hoon Jeong, Jinwon Lee, Seonghoe Jang, Shin-Young Lee, Kiyounng Yang, Byoung-ho Lee, Sinok Moon, Kyungsook An, Min-Jung Han, Jung-Hwa Yu, Namok Lee, Su-Young An, Sun-Hee Park, Eun-Sik Song, In-Soon Park, and Hyun-Sook Lee</i>	253
Transposons and functional genomics in rice <i>R. Greco, P.B.F. Ouwerkerk, C. Sallaud, A. Kohli, C. Favalli, T. Beguiristain, L. Colombo, E. Pè, P. Puigdomènech, E. Guiderdoni, P. Christou, J.H.C. Hoge, and A. Pereira</i>	263

Retrotransposons of rice as a tool for the functional analysis of genes	279
<i>H. Hirochika, A. Mayo, M. Yamazaki, S. Takeda, K. Abe, R. Hirochika, G.K. Agrawal, T. Watanabe, K. Sugimoto, T. Sasaki, K. Murata, K. Tanaka, K. Onosato, A. Miyazaki, Y. Yamashita, and N. Kojima</i>	
Bioinformatics and the rice genome	293
<i>B.A. Antonio, K. Sakata, and T. Sasaki</i>	
Gene isolation and function	
Enhancing deployment of genes for blast resistance: opportunities from cloning a resistance gene/avirulence gene pair	309
<i>B. Valent, G.T. Bryan, Y. Jia, L. Farrall, S.A. McAdams, K.N. Faulk, and M. Levy</i>	
Molecular signaling in disease resistance of rice	323
<i>K. Shimamoto, A. Takahashi, and T. Kawasaki</i>	
Structure, function, and evolution of disease resistance genes in rice	335
<i>Guo-Liang Wang, Hei Leung, and P. Ronald</i>	
Isolation of candidate genes for tolerance of abiotic stresses	345
<i>H.J. Bohner, S. Kawasaki, C.B. Michalowski, Hong Wang, N. Ozturk, M. Deyholos, and D. Galbraith</i>	
Molecular dissection of cell death in rice	365
<i>H. Uchimiya, M. Kawai, M. Yamaguchi, and M. Umeda</i>	
Molecular tools for achieving synthetic apomixis in hybrid rice	377
<i>J. Bennett, X.-Z. Bi, A. Kathiresan, and G.S. Khush</i>	
Transformation	
Engineering for virus resistance in rice	405
<i>N.M. Upadhyaya, Z. Li, M-B. Wang, S. Chen, Z-X. Gong, and P.M. Waterhouse</i>	
Transgenic approaches for generating rice tolerant of dehydration stress	423
<i>Z.Q. Cheng, J. Targolli, J. Su, C.K. He, F. Li, and R. Wu</i>	
High-level expression of C ₄ photosynthetic genes in transgenic rice	439
<i>M. Matsuoka, H. Fukayama, M.S.B. Ku, and M. Miyao</i>	
Transgene integration, organization, and expression in cereals	449
<i>P. Christou, R.M. Twyman, Xiangdong Fu, E. Wegel, A. Kohli, and E. Stoger</i>	

Gene silencing and its reactivation in transgenic rice	465
<i>T.C. Hall, S.P. Kumpatla, P. Kharb, L. Iyer, M. Cervera, Y. Jiang, T. Wang, G. Yang, P. Teerawanichpan, J. Narangajavana, and J. Dong</i>	
Workshop reports	
Rice molecular breeding workshop	484
Functional genomics workshop	485
Bioinformatics workshop	487
RICE GENETICS COOPERATIVE	488
