<i>Preface</i>	vii
1. Statistical Spaces	1
1.1 Basic Properties of Statistical Spaces	2
1.1.1 Measure in Statistical Spaces	2
1.1.2 Equivalence and Divisibility of Family of Probability Distributions	8
1.2 Conditional Probability and Sufficient Statistics	12
1.2.1 Statistics and Random Variables	13
1.2.2 Conditional Probability	15
1.2.3 Sufficient Statistics	20
1.3 Exponential Family and Completeness	27
1.3.1 Exponential Family	28
1.3.2 Completeness	30
1.3.3 Sufficiency and Completeness	34
1.3.4 Ancillary Statistics	35
1.4 Estimation Methods Based on Statistical Space	37
1.4.1 Moment Estimation and Median Estimation	37
1.4.2 Maximum Likelihood Estimators	40
1.4.3 Quality of Estimators	46
1.4.4 Comparison of Estimators	51
1.4.5 Nonparametric MLE for Population cdf	55
1.5 Problems	58
2. Methods of Statistical Tests	65
2.1 Introduction: Background of Problem	65

2.2	Likelihood Ratio Tests	72
2.2.1	The Likelihood Ratio Methods	72
2.2.2	LRT's Limiting Distribution	79
2.3	Tests of Goodness-of-fit	86
2.3.1	Limiting Distribution	87
2.3.2	Test of Independence in Two-Way Contingency Table	90
2.3.3	Test of Independence in Three-Way Contingency Table	92
2.3.4	Goodness-of-Fit Test of Distribution Function . .	95
2.4	Sign Tests and Rank Tests	96
2.4.1	Sign Tests	97
2.4.2	Wilcoxon Signed Rank Tests	98
2.4.3	Wilcoxon Rank Tests	102
2.5	U-I Tests	104
2.6	Empirical Likelihood-Ratio Tests	108
2.7	Problems	112
3.	The Comparison of Test Statistics	117
3.1	Probability of Two Types of Error in Hypothesis Test . .	117
3.2	Neyman-Pearson Fundamental Lemma	121
3.3	Unbiased Test	133
3.4	Comparing Power Functions	141
3.4.1	Test Procedures	141
3.4.2	Power Functions and Their Comparison	145
3.5	Comparing Robustness	148
3.5.1	Efficiency of Tests	148
3.5.2	Asymptotic Relative Efficiency	151
3.6	Interval Estimation Based on Test	154
3.6.1	Interval Estimation and Acceptance Region	156
3.6.2	Uniformly Most Accurate Confidence Interval . .	158
3.6.3	Uniformly Most Accurate Unbiased Confidence Interval	160
3.6.4	Uniformly Most Accuracy and Interval Length . .	165
3.7	Problems	166
4.	Parametric Tests for Simple Models	175
4.1	One-Factor Model: Analysis of Variance	175

4.2	One-Factor Model: Multiple Comparisons	181
4.2.1	Multiple Comparisons	182
4.2.2	Generalized Multiple Comparisons	186
4.2.3	The False Discovery Rate Procedure	189
4.3	One-Factor Model: Trend Tests	191
4.3.1	Linearity Tests	192
4.3.2	Likelihood Ratio Test	197
4.3.3	Linear Rank Tests	210
4.4	Multi-Factor Model: Analysis of Variance	213
4.4.1	Model Without Interaction Effects	213
4.4.2	Model with Interaction Effects	217
4.5	Multi-Factor Model: Log-linear Models	219
4.5.1	Two-Dimensional Contingency Table	219
4.5.2	Three-Dimensional Contingency Table	223
4.5.3	Ancillary Parameter Model	226
4.6	Problems	227
5.	Parametric Tests for Regression Models	235
5.1	Linear Models	235
5.1.1	Establishment of Model	235
5.1.2	Estimating and Testing the Parameters	240
5.1.3	Centralization	245
5.2	Regression Models	248
5.2.1	Regression Model and Linear Model	248
5.2.2	Errors-in-Variables Model	251
5.3	Logistic Regression Models	256
5.3.1	One-Variable Case	257
5.3.2	Multivariable Case	263
5.4	Time Series: Trend Term Models	264
5.5	Time Series: Autoregressive Models	271
5.5.1	Random Walk and Brownian Motion	271
5.5.2	Autoregressive Model	273
5.6	Granger Causality Tests	281
5.6.1	Granger Causality	281
5.6.2	Integration of Order d	284
5.6.3	Real Data Analysis	286
5.7	Problems	288

<i>Bibliography</i>	297
<i>Index</i>	303
