

Contents

<i>Preface</i>	vii
1. Something is wrong with classical electromagnetism	1
1.1 Maxwell equations and wave-fronts	1
1.2 Wave-front propagation	8
1.3 Fronts from an oscillating dipole	11
1.4 Preliminary conclusions	21
2. First steps towards the new model	23
2.1 Modified Maxwell equations	23
2.2 Perfect spherical waves	26
2.3 Travelling signal-packets	30
2.4 Lagrangian formulation	36
2.5 Free-waves and the eikonal equation	41
2.6 Lorentz invariance	46
3. Interaction of waves with matter	53
3.1 Wave bouncing off an obstacle	53
3.2 Diffraction phenomena	59
3.3 Adding the mechanical terms	64
3.4 Properties of the new set of equations	68
4. The equations in the framework of general relativity	77
4.1 Preliminary considerations	77
4.2 The energy tensor	84
4.3 Unified field equations	91
4.4 The divergence of the magnetic field	105

5.	Building matter from fields	111
5.1	Adding the pressure tensor	111
5.2	On the existence of particle-like solutions	119
5.3	Looking for 2-D constrained waves	129
5.4	Neutrinos, electrons and protons	146
5.5	Connections with a Dirac type equation	161
6.	Final speculative considerations	169
6.1	Towards deterministic quantum mechanics	169
6.2	Conclusions	181
	<i>Bibliography</i>	185
	<i>Index</i>	189
