<i>Preface</i>	v
<i>Notation and Symbols</i>	xxi
1. Linear Systems and Linear Matrix Inequalities	1
1.1 Controllability and observability of linear systems	1
1.1.1 Controllability and observability	2
1.1.2 Stabilizability and detectability	6
1.2 Algebraic Lyapunov equations and Lyapunov inequalities	7
1.2.1 Continuous-time algebraic Lyapunov equations . .	7
1.2.2 Continuous-time Lyapunov inequalities	10
1.2.3 Discrete-time algebraic Lyapunov equations and inequalities	11
1.3 Formulation related to linear matrix inequalities	12
1.3.1 Schur complements	12
1.3.2 Projection lemma	13
1.4 The S -procedure	15
1.4.1 The S -procedure for nonstrict inequalities	15
1.4.2 The S -procedure for strict inequalities	15
1.5 Kalman-Yakubovič-Popov (KYP) lemma and its general- ized forms	16
1.6 Notes and references	21
2. LMI Approach to H_∞ Control	23
2.1 \mathcal{L}_∞ norm and \mathcal{H}_∞ norm of the systems	23
2.1.1 \mathcal{L}_∞ and \mathcal{H}_∞ spaces	24
2.1.2 Computing \mathcal{L}_∞ and \mathcal{H}_∞ norms	25

2.2	Linear fractional transformations	27
2.3	Redheffer star product	29
2.4	Algebraic Riccati equations	30
2.4.1	Solvability conditions for Riccati equations	31
2.4.2	Discrete Riccati equations	33
2.5	Bounded real lemma	34
2.6	Small gain theorem	36
2.7	LMI approach to H_∞ control	37
2.7.1	Continuous-time \mathcal{H}_∞ control	37
2.7.2	Discrete-time \mathcal{H}_∞ control	42
2.8	Notes and references	43
3.	Analysis and Control of Positive Real Systems	45
3.1	Positive real systems	45
3.2	Positive real lemma	52
3.3	LMI approach to control of SPR	63
3.4	Relationship between SPR control and SBR control	66
3.5	Multiplier design for SPR	69
3.6	Notes and references	73
4.	Absolute Stability and Dichotomy of Lur'e Systems	75
4.1	Circle criterion of SISO Lur'e systems	75
4.2	Popov criterion of SISO Lur'e systems	80
4.3	Aizerman and Kalman conjectures	82
4.4	MIMO Lur'e systems	84
4.5	Dichotomy of Lur'e systems	89
4.6	Bounded derivative conditions	93
4.7	Notes and references	97
5.	Pendulum-like Feedback Systems	99
5.1	Several examples	99
5.2	Pendulum-like feedback systems	102
5.2.1	The first canonical form of pendulum-like feedback system	103
5.2.2	The second canonical form of pendulum-like feedback system	105
5.2.3	The relationship between the first and the second forms of pendulum-like feedback systems	106

- 5.3 Dichotomy of pendulum-like feedback systems 107
 - 5.3.1 Dichotomy of the second form of autonomous pendulum-like feedback systems 107
 - 5.3.2 Dichotomy of the first form of pendulum-like feedback systems 112
- 5.4 Gradient-like property of pendulum-like feedback systems 114
 - 5.4.1 Gradient-like property of the second form of pendulum-like feedback systems 114
 - 5.4.2 Gradient-like property of the first form of pendulum-like feedback systems 117
- 5.5 Lagrange stability of pendulum-like feedback systems . . . 118
- 5.6 Bakaev stability of pendulum-like feedback systems 124
- 5.7 Notes and references 129

- 6. Controller Design for a Class of Pendulum-like Systems 131
 - 6.1 Controller design with dichotomy or gradient-like property 131
 - 6.1.1 Controller design with dichotomy 131
 - 6.1.2 Controller design with gradient-like property . . . 137
 - 6.2 Controller design with Lagrange stability 139
 - 6.3 Notes and references 147

- 7. Controller Designs for Systems with Input Nonlinearities 149
 - 7.1 Lagrange stabilizing for systems with input nonlinearities 149
 - 7.2 Bakaev stabilizing for systems with input nonlinearities . 155
 - 7.3 Control for systems with input nonlinearities guaranteeing dichotomy 159
 - 7.4 Notes and references 162

- 8. Analysis and Control for Uncertain Feedback Nonlinear Systems 163
 - 8.1 Dichotomy of systems with norm bounded uncertainties . 163
 - 8.1.1 Robust analysis for dichotomy 164
 - 8.1.2 Robust control for systems with dichotomy 168
 - 8.2 Dichotomy of pendulum-like systems with uncertainties . 174
 - 8.3 Controller design with dichotomy for uncertain pendulum-like systems 179
 - 8.4 Lagrange stability for uncertain pendulum-like systems . . 184
 - 8.5 Gradient-like property for pendulum-like systems with uncertainties 187

8.6	Control of uncertain systems guaranteeing gradient-like property	191
8.7	Gradient-like property of systems with norm bounded uncertainties	199
8.8	Notes and references	205
9.	Control of Periodic Oscillations in Nonlinear Systems	207
9.1	Periodic solutions in systems with cylindrical phase space	207
9.2	Nonexistence of periodic solutions in Lur'e systems	211
9.2.1	LMI-based conditions for nonexistence of periodic solutions	211
9.2.2	Robustness analysis	213
9.2.3	Robust synthesis	214
9.3	Nonexistence of cycles of the second kind in interconnected systems	218
9.3.1	Nonexistence of cycles of the second kind in interconnected systems	220
9.3.2	Nonlinear interconnection design	224
9.4	Cycle slipping in phase synchronization systems	228
9.5	Notes and references	236
10.	Interconnected Systems	237
10.1	Linearly interconnected systems	238
10.1.1	The effect of the unstable subsystem	238
10.1.2	Interconnected feedbacks	241
10.1.3	Decentralized controller design	244
10.1.4	The effect of small gain theorem	246
10.2	Interconnected Lur'e systems	250
10.3	Lagrange stability of a generalized smooth Chua circuit .	252
10.4	Input and output coupled nonlinear systems	257
10.5	Notes and references	264
11.	Chua's Circuit	267
11.1	Chua's circuit	267
11.2	Dichotomy: application to chaos control for Chua's circuit system	270
11.3	Kalman conjecture: application to the stabilization of Chua's circuit	280

11.4	An extended Chua circuit	286
11.5	Coupled Chua circuit	288
11.6	Notes and references	293
<i>Bibliography</i>		295
<i>Index</i>		309
