Preface	vii
Notation	xxi
1 Quantum Angular Momentum	1
1.1 Background and Viewpoint	1
1.1.1 Euclidean and Cartesian 3-space	1
1.1.2 Newtonian physics	9
1.1.3 Nonrelativistic quantum physics	10
1.1.4 Unitary frame rotations	17
1.2 Abstract Angular Momentum	28
1.2.1 Brief background and history	28
1.2.2 One angular momentum	30
1.2.3 Two angular momenta	35
1.3 $SO(3, \mathbb{R})$ and $SU(2)$ Solid Harmonics	43
1.3.1 Inner products	49
1.4 Combinatorial Features	51
1.4.1 Combinatorial definition of Wigner-Clebsch-Gordan coefficients	51
1.4.2 Magic square realization	59
1.5 Kronecker Product of Solid Harmonics	61
1.6 $SU(n)$ Solid Harmonics	64

1.6.1	Definition and properties of $SU(n)$ solid harmonics	64
1.6.2	MacMahon and Schwinger master theorems	66
1.6.3	Combinatorial proof of the multiplication property	67
1.6.4	Maclaurin monomials	71
1.6.5	Summary of relations	74
1.7	Generalization to $U(2)$	75
1.7.1	Definition of $U(2)$ solid harmonics	75
1.7.2	Basic multiplication properties	78
1.7.3	Indeterminate and derivative actions on the $U(2)$ solid harmonics	81
2	Composite Systems	83
2.1	General Setting	83
2.1.1	Angular momentum state vectors of a composite system	83
2.1.2	Group actions in a composite system	89
2.1.3	Standard form of the Kronecker direct sum	90
2.1.4	Reduction of Kronecker products	93
2.1.5	Recoupling matrices	94
2.2	Binary Coupling Theory	97
2.2.1	Binary trees	100
2.2.2	Standard labeling of binary trees	107
2.2.3	Generalized WCG coefficients defined in terms of binary trees	109
2.2.4	Binary coupled state vectors	112
2.2.5	Binary reduction of Kronecker products	114
2.2.6	Binary recoupling matrices	115
2.2.7	Triangle patterns and triangle coefficients	119
2.2.8	Racah coefficients	131
2.2.9	Recoupling matrices for $n = 3$	137
2.2.10	Recoupling matrices for $n = 4$	140

2.2.11	Structure of general triangle coefficients and recoupling matrices	152
2.3	Classification of Recoupling Matrices	156
3	Graphs and Adjacency Diagrams	163
3.1	Binary Trees and Trivalent Trees	163
3.2	Nonisomorphic Trivalent Trees	172
3.2.1	Shape labels of binary trees	184
3.3	Cubic Graphs and Trivalent Trees	189
3.4	Cubic Graphs	198
3.4.1	Factoring properties of cubic graphs	200
3.4.2	Join properties of cubic graphs	213
3.4.3	Cubic graph matrices	221
3.4.4	Labeled cubic graphs	226
3.4.5	Summary and unsolved problems	228
4	Generating Functions	229
4.1	Pfaffians and Double Pfaffians	230
4.2	Skew-Symmetric Matrix	232
4.3	Triangle Monomials	238
4.4	Coupled Wave Functions	239
4.5	Recoupling Coefficients	241
4.6	Special Cases	245
4.6.1	Cubic graph geometry of the $6 - j$ and $9 - j$ coefficients	255
4.7	Concluding Remarks	259
5	The D^λ-Polynomials: Form	261
5.1	Overview	261
5.2	Defining Relations	268
5.2.1	Another proof of the multiplication rule	277

5.3	Restriction to Fewer Variables	278
5.4	Vector Space Aspects	280
5.5	Fundamental Structural Relations	283
5.5.1	Structural relations	283
5.5.2	Principal objectives and tasks	284
6	Operator Actions in Hilbert Space	285
6.1	Introductory Remarks	285
6.2	Action of Fundamental Shift Operators	286
6.3	Digraph Interpretation	295
6.4	Algebra of Shift Operators	301
6.5	Hilbert Space and D^λ -Polynomials	304
6.6	Shift Operator Polynomials	308
6.7	Kronecker Product Reduction	312
6.8	More on Explicit Operator Actions	318
7	The D^λ-Polynomials: Structure	325
7.1	The $C^\lambda(A)$ Matrices	325
7.2	Reduction of $D^p(Z) \otimes D^\lambda(Z)$	329
7.3	Binary Tree Structure: C^λ -Coefficients	335
7.3.1	The D^λ -polynomials for partitions with two nonzero parts	342
7.3.2	Recurrence relation for the D^λ -polynomials . . .	351
8	The General Linear and Unitary Groups	355
8.1	Background and Review	355
8.2	$GL(n, \mathbb{C})$ and its Unitary Subgroup $U(n)$	358
8.3	Commuting Hermitian Observables	368
8.3.1	The Gelfand invariants	368
8.4	Differential Operator Actions	370

8.5	Eigenvalues of the Gelfand Invariants	371
8.5.1	A new class of symmetric functions	373
8.5.2	The general eigenvalues of the Gelfand invariants	375
9	Tensor Operator Theory	379
9.1	Introduction	379
9.1.1	A basis of irreducible tensor operators	382
9.2	Unit Tensor Operators	386
9.2.1	Summary of properties of unit tensor operators . .	389
9.2.2	Explicit unit tensor operators	392
9.3	Canonical Tensor Operators	394
9.3.1	Application of the factorization lemma to canonical tensor operators	399
9.3.2	Subgroup conditions and reduced matrix elements	403
9.4	Properties of Reduced Matrix Elements	408
9.4.1	Unit projective operators	410
9.4.2	The pattern calculus	415
9.4.3	Shift invariance of Kostka and Littlewood-Richardson numbers	421
9.5	The Unitary Group $U(3)$	422
9.5.1	The $U(3)$ canonical tensor operators	422
9.6	The $U(3)$ Characteristic Null Spaces	425
9.7	The $U(3) : U(2)$ Unit Projective Operators	432
9.7.1	Coupling rules and Racah coefficients	433
9.7.2	Limit relations	440
10	Compendium A. Basic Algebraic Objects	447
10.1	Groups	447
10.1.1	Group actions	449
10.2	Rings	451
10.2.1	Rings of polynomials	452

10.2.2	Vector spaces of polynomials	455
10.3	Abstract Hilbert Spaces	456
10.3.1	Inner product spaces	456
10.3.2	Linear operators	458
10.3.3	Inner products and linear operators	460
10.3.4	Orthonormalization methods	461
10.3.5	Matrix representations of linear operators	464
10.4	Properties of Matrices	465
10.4.1	Properties of normal matrices	467
10.4.2	Inner product on the space of complex matrices	468
10.4.3	Exponentiated matrices	469
10.4.4	Lie bracket polynomials	476
10.5	Tensor Product Spaces	486
10.6	Vector Spaces of Polynomials	488
10.7	Group Representations	494
10.7.1	Irreducible representations of groups	499
10.7.2	Schur's lemmas	501
11	Compendium B: Combinatorial Objects	505
11.1	Partitions and Tableaux	506
11.1.1	Restricted compositions	512
11.1.2	Linear ordering of sequences and partitions	513
11.2	Young Frames and Tableaux	514
11.2.1	Skew tableaux	520
11.3	Gelfand-Tsetlin Patterns	523
11.3.1	Combinatorial origin of Gelfand-Tsetlin patterns	523
11.3.2	Group theoretical origin of Gelfand-Tsetlin patterns	528
11.3.3	Skew Gelfand-Tsetlin patterns	528
11.3.4	Notations	532

11.3.5	Triangular and skew Gelfand-Tsetlin patterns . . .	533
11.3.6	Words and lattice permutations	535
11.3.7	Lattice permutations and Littlewood-Richardson numbers	538
11.3.8	Kostka and Littlewood-Richardson numbers	550
11.4	Generating Functions and Relations	556
11.4.1	Notations	557
11.4.2	Counting relations	558
11.4.3	Generating relations of functions	559
11.4.4	Operator generated functions	561
11.5	Multivariable Special Functions	563
11.5.1	Solid harmonics	564
11.5.2	Double harmonic functions in \mathbb{R}^3	565
11.5.3	Hypergeometric functions	565
11.5.4	MacMahon's master theorem	568
11.5.5	Power of a determinant	568
11.6	Symmetric Functions	570
11.6.1	Introduction	570
11.6.2	Four basic symmetric functions	571
11.6.3	Vandermonde determinants	572
11.6.4	Schur functions	573
11.6.5	Dual bases for symmetric functions	578
11.7	Sylvester's Identity	580
11.8	Derivation of Weyl's Dimension Formula	582
11.8.1	Vandermonde determinants, Bernoulli polynomi- als, and Weyl's formula	582
11.9	Other Topics	585
11.9.1	Alternating sign matrices	585
11.9.2	Binary trees, graphs, and digraphs	595
11.9.3	Umbral calculus and double tableau calculus . . .	595

11.9.4 Special functions 596
11.9.5 Other generalizations 596
