<i>Preface to the Second Edition</i>	vii
<i>Preface to the First Edition</i>	ix
1. Introduction	1
1.1 Radiation and Particle Interactions . . . . .	2
1.2 Particles and Types of Interaction . . . . .	4
1.2.1 Quarks and Leptons . . . . .	6
1.3 Relativistic Kinematics . . . . .	6
1.3.1 The Two-Body Scattering . . . . .	9
1.3.2 The Invariant Mass . . . . .	11
1.4 Cross Section and Differential Cross Section . . . . .	13
1.4.1 Atomic Mass, Weight, Standard Weight and Atomic Mass Unit . . . . .	15
1.5 Classical Elastic Coulomb Scattering Cross Section . . . . .	16
1.6 Detectors and Large Experimental Apparata . . . . .	20
1.6.1 Trigger, Monitoring, Data Acquisition, Slow Control . . . . .	22
1.6.2 General Features of Particle Detectors and Detection Media . . . . .	23
1.6.3 Radiation Environments and Silicon Devices . . . . .	29
2. Electromagnetic Interaction of Radiation in Matter	31
2.1 Passage of Ionizing Particles through Matter . . . . .	32
2.1.1 The Collision Energy-Loss of Massive Charged Particles . . . . .	32
2.1.1.1 The Barkas–Andersen Effect . . . . .	42
2.1.1.2 The Shell Correction Term . . . . .	44
2.1.1.3 The Density Effect and Relativistic Rise . . . . .	46
2.1.1.4 Restricted Energy-Loss and Fermi Plateau . . . . .	49
2.1.1.5 Energy-Loss Formula for Compound Materials . . . . .	52
2.1.2 Energy-Loss Fluctuations . . . . .	53

2.1.2.1	$\delta$ -Rays, Straggling Function, and Transport Equation . . . . .	54
2.1.2.2	The Landau–Vavilov Solutions for the Transport Equation . . . . .	56
2.1.2.3	The Most Probable Collision Energy-Loss for Massive Charged Particles . . . . .	59
2.1.2.4	Improved Energy-Loss Distribution and Distant Collisions . . . . .	60
2.1.2.5	Distant Collision Contribution to Energy Straggling in Thin Silicon Absorbers . . . . .	67
2.1.2.6	Improved Energy-Loss Distribution for Multi-Particles in Silicon . . . . .	68
2.1.3	Range of Heavy Charged Particles . . . . .	70
2.1.4	Heavy Ions . . . . .	74
2.1.4.1	Nuclear Stopping Power . . . . .	77
2.1.5	Ionization Yield in Gas Media . . . . .	83
2.1.6	Passage of Electrons and Positrons through Matter . . . . .	85
2.1.6.1	Collision Losses by Electrons and Positrons . . . . .	85
2.1.6.2	Most Probable Energy-Loss of Electrons and Positrons . . . . .	87
2.1.6.3	Practical Range of Electrons . . . . .	91
2.1.7	Radiation Energy-Loss by Electrons and Positrons . . . . .	95
2.1.7.1	Collision and Radiation Stopping Powers . . . . .	104
2.1.7.2	Radiation Yield and Bremsstrahlung Angular Distribution . . . . .	105
2.1.7.3	Radiation Length and Complete Screening Approximation . . . . .	114
2.1.7.4	Critical Energy . . . . .	117
2.2	Multiple and Extended Volume Coulomb Interactions . . . . .	118
2.2.1	The Multiple Coulomb Scattering . . . . .	119
2.2.2	Emission of Čerenkov Radiation . . . . .	124
2.2.3	Emission of Transition Radiation . . . . .	130
2.3	Photon Interaction and Absorption in Matter . . . . .	136
2.3.1	The Photoelectric Effect . . . . .	138
2.3.1.1	The Auger Effect . . . . .	144
2.3.2	The Compton Scattering . . . . .	146
2.3.2.1	The Klein–Nishina Equation for Unpolarized Photons . . . . .	150
2.3.2.2	Electron Binding Corrections to Compton and Rayleigh Scatterings . . . . .	157
2.3.2.3	The Thomson Cross Section . . . . .	161
2.3.2.4	Radiative Corrections and Double Compton Effect . . . . .	162

2.3.3	Pair Production . . . . .	163
2.3.3.1	Pair Production in the Field of a Nucleus . . . . .	164
2.3.3.2	Pair Production in the Electron Field . . . . .	176
2.3.3.3	Angular Distribution of Electron and Positron Pairs . . . . .	179
2.3.4	Photonuclear Scattering, Absorption and Production . . .	179
2.3.5	Attenuation Coefficients, Dosimetric and Radiobiological Quantities . . . . .	183
2.4	Electromagnetic Cascades in Matter . . . . .	197
2.4.1	Phenomenology and Natural Units of Electromagnetic Cascades . . . . .	198
2.4.2	Propagation and Diffusion of Electromagnetic Cascades in Matter . . . . .	199
2.4.2.1	Rossi's Approximation B and Cascade Multiplica- tion of Electromagnetic Shower . . . . .	199
2.4.2.2	Longitudinal Development of the Electromagnetic Shower . . . . .	202
2.4.2.3	Lateral Development of Electromagnetic Showers	207
2.4.2.4	Energy Deposition in Electromagnetic Cascades .	213
2.4.3	Shower Propagation and Diffusion in Complex Absorbers .	214
3.	Nuclear Interactions in Matter	217
3.1	General Properties of the Nucleus . . . . .	217
3.1.1	Radius of Nuclei and the Liquid Droplet Model . . . . .	220
3.1.1.1	Droplet Model and Semi-empirical Mass Formula	221
3.1.2	Form Factor and Charge Density of Nuclei . . . . .	223
3.1.3	Angular and Magnetic Moment, Shape of Nuclei . . . . .	226
3.1.4	Stable and Unstable Nuclei . . . . .	227
3.1.4.1	The $\beta$ -Decay and the Nuclear Capture . . . . .	230
3.1.4.2	The $\alpha$ -Decay . . . . .	231
3.1.5	Fermi Gas Model and Nuclear Shell Model . . . . .	235
3.1.5.1	$\gamma$ Emission by Nuclei . . . . .	239
3.2	Phenomenology of Interactions on Nuclei at High Energy . . . . .	240
3.2.1	Energy and $A$ -Dependence of Cross Sections . . . . .	241
3.2.1.1	Collision and Inelastic Length . . . . .	242
3.2.2	Coherent and Incoherent Interactions on Nuclei . . . . .	246
3.2.2.1	Kinematics for Coherent Condition . . . . .	246
3.2.2.2	Coherent and Incoherent Scattering . . . . .	249
3.2.3	Multiplicity of Charged Particles and Angular-Distribution of Secondaries . . . . .	255
3.2.3.1	Rapidity and Pseudorapidity Distributions . . . . .	258
3.2.4	Emission of Heavy Prongs . . . . .	262

3.2.5	The Nuclear Spallation Process . . . . .	267
3.2.6	Nuclear Temperature and Evaporation . . . . .	269
3.3	Hadronic Shower Development and Propagation in Matter . . . . .	274
3.3.1	Phenomenology of the Hadronic Cascade in Matter . . . . .	275
3.3.2	Natural Units in the Hadronic Cascade . . . . .	278
3.3.3	Longitudinal and Lateral Hadronic Development . . . . .	280
4.	Radiation Environments and Damage in Silicon Semiconductors . . . . .	287
4.1	Radiation Environments . . . . .	289
4.1.1	High-Luminosity Machines Environments for Particle Physics Experiments . . . . .	289
4.1.1.1	Ionization Processes and Collider Environments . . . . .	293
4.1.1.2	Non-Ionization Processes, NIEL Scaling Hypothe- sis and Collider Environments . . . . .	294
4.1.2	Space Radiation Environment . . . . .	297
4.1.2.1	Solar Wind and Heliospheric Magnetic Field . . . . .	300
4.1.2.2	Extension of the Heliosphere and the Earth Magnetosphere . . . . .	313
4.1.2.3	Propagation of Galactic Cosmic Rays through Interplanetary Space . . . . .	319
4.1.2.4	Solar, Heliospheric and Galactic Cosmic Rays in the Interplanetary Space . . . . .	331
4.1.2.5	Trapped Particles and Earth Magnetosphere . . . . .	335
4.1.3	Neutron Spectral Fluence in Nuclear Reactor Environment . . . . .	342
4.1.3.1	Fast Neutron Cross Section on Silicon . . . . .	343
4.1.3.2	Energy Distribution of Reactor Neutrons and Classification . . . . .	345
4.2	Relevant Processes of Energy Deposition and Damage . . . . .	346
4.2.1	NIEL and Displacement Damage . . . . .	346
4.2.1.1	Knock-on Atoms and Displacement Cascade . . . . .	350
4.2.1.2	Neutron Interactions . . . . .	355
4.2.1.3	Interactions of Protons, $\alpha$ -particles and Heavy- Isotopes . . . . .	356
4.2.1.4	Electron Interactions . . . . .	360
4.2.1.5	Damage Function . . . . .	362
4.2.2	Radiation Induced Defects . . . . .	370
4.2.3	Ionization Energy-Loss and NIEL Processes . . . . .	376
4.2.3.1	Imparted Dose in Silicon . . . . .	377
4.2.3.2	Ionization Damage . . . . .	380
4.3	Radiation Induced Defects and Modification of Silicon Bulk and $p - n$ Junction Properties . . . . .	381
4.3.1	Displacement Damage Effect on Minority Carrier Lifetime . . . . .	382

4.3.2	Carrier Generation and Leakage Current . . . . .	385
4.3.3	Diode Structure and Rectification Down to Cryogenic Temperature . . . . .	387
4.3.3.1	Rectification Property Up to Large Fast-Neutron Fluences at Room Temperature . . . . .	387
4.3.3.2	Large Radiation Damage and $p - i - n$ Structure at Room Temperature . . . . .	392
4.3.3.3	$I - V$ Characteristics Down to Cryogenic Temperature . . . . .	393
4.3.4	Complex Junction Impedance and Cryogenic Temperatures	398
4.3.5	Resistivity, Hall Coefficient and Hall Mobility at Large Displacement Damage . . . . .	405
4.3.6	AFM Structure Investigation in Irradiated Devices . . . . .	416
5.	Scintillating Media and Scintillator Detectors	419
5.1	Scintillators . . . . .	419
5.1.1	Organic Scintillators . . . . .	420
5.1.2	Inorganic Scintillators . . . . .	423
5.2	The Čerenkov Detectors . . . . .	426
5.2.1	Threshold Čerenkov Detectors . . . . .	429
5.2.2	Differential Čerenkov Detectors . . . . .	433
5.2.3	Ring Imaging Čerenkov (RICH) Detectors . . . . .	434
5.3	Wavelength Shifters . . . . .	435
5.4	Transition Radiation Detectors (TRD) . . . . .	437
5.5	Scintillating Fibers . . . . .	440
5.6	Detection of the Scintillation Light . . . . .	442
5.7	Applications in Calorimetry . . . . .	448
5.8	Application in Time-of-Flight (ToF) Technique . . . . .	448
6.	Solid State Detectors	451
6.1	Basic Principles of Operation . . . . .	452
6.1.1	Unpolarized $p - n$ Junction . . . . .	454
6.1.2	Polarized $p - n$ Junction . . . . .	457
6.1.3	Capacitance . . . . .	459
6.1.4	Charge Collection Measurements . . . . .	461
6.1.5	Charge Transport in Silicon Diodes . . . . .	462
6.1.6	Leakage or Reverse Current . . . . .	474
6.1.7	Noise Characterization of Silicon Detectors . . . . .	476
6.2	Charge Collection Efficiency and Hecht Equation . . . . .	477
6.3	Spectroscopic Characteristics of Standard Planar Detectors . . . . .	481
6.3.1	Energy Resolution of Standard Planar Detectors . . . . .	485
6.4	Microstrip Detectors . . . . .	486

6.5	Pixel Detector Devices . . . . .	491
6.5.1	The MediPix-type Detecting Device . . . . .	492
6.5.2	Examples of Application: Particle Physics . . . . .	494
6.5.2.1	Electrons and Photons . . . . .	496
6.5.2.2	Neutrons . . . . .	496
6.5.2.3	Muons, Pions and Protons . . . . .	498
6.5.2.4	$\alpha$ -Particles and Heavier Ions . . . . .	499
6.5.2.5	Charge Sharing . . . . .	499
6.6	Photovoltaic and Solar Cells . . . . .	503
6.7	Neutrons Detection with Silicon Detectors . . . . .	508
6.7.1	Principles of Neutron Detection with Silicon Detectors . . . . .	509
6.7.1.1	Signal in Silicon Detectors for Thermal Neutrons . . . . .	512
6.7.1.2	Signals in Silicon Detectors by Fast Neutrons . . . . .	518
6.7.2	3-D Neutron Detectors . . . . .	521
6.8	Radiation Effects on Silicon Semiconductor Detectors . . . . .	522
6.8.1	MESA Radiation Detectors . . . . .	522
6.8.1.1	Electrical features of Planar MESA Detectors . . . . .	524
6.8.1.2	Spectroscopic Characteristics of MESA Detectors . . . . .	526
6.8.2	Results of Irradiation Tests of Planar MESA Detectors . . . . .	527
6.8.3	Irradiation with Low-Energy Protons and Violation of NIEL Scaling in High-Resistivity Silicon detectors . . . . .	531
7.	Displacement Damage and Particle Interactions in Silicon Devices . . . . .	539
7.1	Displacement Damage in Irradiated Bipolar Transistors . . . . .	541
7.1.1	Gain Degradation of Bipolar Transistors and Messenger– Spratt Equation . . . . .	544
7.1.2	Surface and Total Dose Effects on the Gain Degradation of Bipolar Transistors . . . . .	550
7.1.3	Generalized Messenger–Spratt Equation for Gain Degradation of Bipolar Transistors . . . . .	551
7.1.4	Transistor Gain and Self-Annealing . . . . .	554
7.1.5	Radiation Effects on Low-Resistivity Base Spreading- Resistance . . . . .	555
7.2	Single Event Effects . . . . .	558
7.2.1	Classification of SEE . . . . .	560
7.2.2	SEE in Spatial Radiation Environment . . . . .	562
7.2.3	SEE in Atmospheric Radiation Environment . . . . .	563
7.2.4	SEE in Terrestrial Radiation Environment . . . . .	564
7.2.5	SEE produced by Radioactive Sources . . . . .	565
7.2.6	SEE in Accelerator Radiation Environment . . . . .	568
7.2.7	SEE Generation Mechanisms . . . . .	569
7.2.7.1	Direct Ionization . . . . .	569

7.2.7.2	Indirect Ionization . . . . .	571
7.2.7.3	Linear Energy Transfer (LET) . . . . .	572
7.2.7.4	Sensitive Volume . . . . .	573
7.2.7.5	Critical Charge . . . . .	573
7.2.8	SEE Cross-Section . . . . .	577
7.2.8.1	Calculation of SEU Rate for Ions . . . . .	579
7.2.8.2	Calculation of SEU Rate for Protons and Neutrons . . . . .	581
7.2.9	SEE Mitigation . . . . .	584
8.	Ionization Chambers . . . . .	585
8.1	Basic Principle of Operation . . . . .	585
8.2	Recombination Effects . . . . .	587
8.2.1	Germinate or Initial Recombination . . . . .	587
8.2.2	Columnar Recombination . . . . .	588
8.2.3	The Box Model . . . . .	589
8.2.4	Recombination with Impurities . . . . .	590
8.3	Example of Ionization Chamber Application: The $\alpha$ -Cell . . . . .	592
8.3.1	The $\alpha$ -Cell . . . . .	592
8.3.2	Charge Measurement with the $\alpha$ -Cell . . . . .	594
8.3.3	Examples of Pollution Tests Using the $\alpha$ -Cell . . . . .	600
8.4	Proportional Counters . . . . .	603
8.4.1	Avalanche Multiplication . . . . .	603
8.5	Proportional Counters: Cylindrical Coaxial Wire Chamber . . . . .	605
8.6	The Geiger–Mueller Counter . . . . .	609
9.	Principles of Particle Energy Determination . . . . .	611
9.1	Experimental Physics and Calorimetry . . . . .	611
9.1.1	Natural Units in Shower Propagation . . . . .	615
9.2	Electromagnetic Sampling Calorimetry . . . . .	615
9.2.1	Electromagnetic Calorimeter Response . . . . .	615
9.2.2	The $e/mip$ Ratio . . . . .	618
9.2.2.1	$e/mip$ Dependence on $Z$ -Values of Readout and Passive Absorbers . . . . .	622
9.2.2.2	$e/mip$ Dependence on Absorber Thickness . . . . .	626
9.2.3	$e/mip$ Reduction in High- $Z$ Sampling Calorimeters: The Local Hardening Effect . . . . .	627
9.3	Principles of Calorimetry with Complex Absorbers . . . . .	631
9.3.1	The Filtering Effect and how to tune the $e/mip$ Ratio . . . . .	634
9.3.2	$e/mip$ Reduction by Combining Local Hardening and Filtering Effects . . . . .	637
9.4	Energy Resolution in Sampling Electromagnetic Calorimetry . . . . .	640

9.4.1	Visible Energy Fluctuations . . . . .	640
9.4.1.1	Calorimeter Energy Resolution for Dense Readout Detectors . . . . .	642
9.4.1.2	Calorimeter Energy Resolution for Gas Readout Detectors . . . . .	646
9.4.2	Effect of Limited Containment on Energy Resolution . . .	650
9.5	Homogeneous Calorimeters . . . . .	654
9.5.1	General Considerations . . . . .	654
9.5.2	Energy Measurement . . . . .	657
9.6	Position Measurement . . . . .	664
9.7	Electron Hadron Separation . . . . .	668
9.8	Hadronic Calorimetry . . . . .	669
9.8.1	Intrinsic Properties of the Hadronic Calorimeter . . . . .	669
9.8.1.1	The $e/h$ , $e/\pi$ , $h/mip$ and $\pi/mip$ Ratios . . . . .	670
9.8.1.2	Compensating Condition $e/h = e/\pi = 1$ and Linear Response . . . . .	674
9.9	Methods to Achieve the Compensation Condition . . . . .	678
9.9.1	Compensation Condition by Detecting Neutron Energy . .	680
9.9.2	Compensation Condition by Tuning the $e/mip$ Ratio . .	686
9.10	Compensation and Hadronic Energy Resolution . . . . .	696
9.10.1	Non-Compensation Effects and the $\phi(e/\pi)$ Term . . . . .	701
9.10.2	Determination of Effective Intrinsic Resolutions . . . . .	704
9.10.3	Effect of Visible-Energy Losses on Calorimeter Energy Resolution . . . . .	705
9.11	Calorimetry at Very High Energy . . . . .	708
9.11.1	General Considerations . . . . .	708
9.11.2	Air Showers (AS) and Extensive Air Showers (EAS) . . .	711
9.11.3	Electromagnetic Air Showers . . . . .	714
9.11.3.1	Longitudinal Development . . . . .	714
9.11.3.2	Lateral Development . . . . .	715
9.11.4	Hadronic Extensive Air Showers . . . . .	716
9.11.5	The Muon Component of Extensive Air Showers . . . . .	720
10.	Superheated Droplet (Bubble) Detectors and CDM Search	721
10.1	The Superheated Droplet Detectors and their Operation . . . . .	723
10.1.1	Neutron Response Measurement . . . . .	727
10.1.2	Alpha-Particle Response Measurement . . . . .	732
10.1.3	Radon Detection . . . . .	735
10.1.4	Spontaneous Nucleation . . . . .	736
10.1.5	Signal Measurement with Piezoelectric Sensors . . . . .	736
10.2	Search of Cold Dark Matter (CDM) . . . . .	737
10.2.1	Calculation of the Neutralino–Nucleon Exclusion Limits . .	738

10.2.1.1	Spin-Independent or Coherent Cross Section . . .	739
10.2.1.2	Spin-Dependent or Incoherent Cross Section . . .	742
10.2.1.3	Calculation of $\langle S_p \rangle$ and $\langle S_n \rangle$ in Nuclei . . . . .	747
10.2.1.4	Shell Models Calculation and Validation of $\langle S_p \rangle$ and $\langle S_n \rangle$ . . . . .	752
10.2.2	The PICASSO Experiment, an Example . . . . .	753
11.	Medical Physics Applications . . . . .	755
11.1	Single Photon Emission Computed Tomography (SPECT) . . . . .	757
11.2	Positron Emission Tomography (PET) . . . . .	769
11.3	Magnetic Resonance Imaging (MRI) . . . . .	773
11.3.1	Physical Basis of MRI . . . . .	774
11.3.2	Forming an Image . . . . .	776
11.3.2.1	Spin-Echo . . . . .	776
11.3.2.2	Gradient-Echo . . . . .	778
11.3.2.3	Space Positioning . . . . .	778
11.3.2.4	Flows . . . . .	779
11.3.2.5	Functional MRI . . . . .	780
11.4	X-Ray Medical Imaging with MediPix Devices . . . . .	780
11.4.1	The Contrast . . . . .	781
11.4.2	The Modulation Transfer Function . . . . .	781
11.4.3	The Detective Quantum Efficiency . . . . .	782
Appendix A	General Properties and Constants . . . . .	785
A.1	Conversion Factors . . . . .	786
A.2	Physical Constants . . . . .	798
A.3	Periodic Table of Elements . . . . .	802
A.4	Electronic Structure of the Elements . . . . .	804
A.5	Isotopic Abundances . . . . .	807
A.6	Commonly Used Radioactive Sources . . . . .	809
A.7	Free Electron Fermi Gas . . . . .	810
A.8	Gamma-Ray Energy and Intensity Standards . . . . .	813
Appendix B	Mathematics and Statistics . . . . .	817
B.1	Probability and Statistics for Detection Systems . . . . .	818
B.2	Table of Integrals . . . . .	829
	<i>Bibliography</i> . . . . .	831
	<i>Index</i> . . . . .	883
