
Contents

Biographical and Topical Introduction	1
[1] W. Pauli's Scientific Work	29
[2] Is the Zero-Point Energy Real?	63
[3] 50 Years Ago Pauli Invented the Neutrino	73
[4] Applications of Quantum Mechanics (1926-1933)	81
[5] Pauli (Wolfgang) 1900-1958	91
[6] Bohr, Delbrück, Pauli and Biology	97
[7] Ernst Stueckelberg	107
[8] The Role of Space and the Problem of Localization in Modern Physics	109
[9] Wolfgang Pauli and the Role of the Observer in Modern Physics	121
[10] Quantum Theory in the Light of Modern Experiments	131
[11] After-Dinner Speech on Board the Ship 'Ville de Neuchâtel'	143
[12] Preface in: A Course on Many-Body Theory Applied to Solid-State Physics	147
[13] Rational and Irrational Features in Wolfgang Pauli's Life	149
[14] The Swiss Years of Albert Einstein	161
[15] Wolfgang Pauli and the Development of Quantum Field Theory	165
[16] Observability and Realism in Modern Experiments with Correlated Quantum Systems	173

[17]	The Science of Matter: Fascination and Limits	191
[18]	World-Space — Atom-Space: Fullness or Emptiness?	209
[19]	Wolfgang Pauli — C.G. Jung, a Dialogue over the Boundaries	219
[20]	The History and the Physics of the Zero-Point Energy	223
