

# Contents

<i>Preface</i>	v
1. Main Physical Considerations and Transport Balance Equations	1
1.1 Center-of-Mass and Relative Variables of Electrons . . .	1
1.2 Center-of-Mass Treated as a Classical Particle . . . . .	4
1.3 Initial Density Matrix . . . . .	7
1.4 Density Matrix and Statistical Averages to Linear Order in $H_I$ . . . . .	9
1.5 Force Balance Equation . . . . .	10
1.6 Energy Balance Equation . . . . .	12
2. DC Steady-State Transport	15
2.1 Balance Equations for DC Steady-State Transport in Three-Dimensional Systems . . . . .	15
2.2 Degenerate Case, Impurity and Phonon Scatterings . .	19
2.2.1 Ohmic resistivity, Bloch–Grüneisen formula .	19
2.2.2 Warm-electron conduction . . . . .	21
2.2.3 Electron cooling . . . . .	22
2.2.4 Nonlinear zero-temperature limit . . . . .	23
2.3 Acoustic and Optic Phonon Scatterings . . . . .	25
2.3.1 Acoustic phonon scatterings . . . . .	25
2.3.2 Optical deformation-potential scatterings . . .	28
2.4 Effect of Dynamic Screening . . . . .	29
2.5 Balance Equations for Quasi-Two-Dimensional Systems . . . . .	31

2.6	Hot Electron Transport in GaAs/AlGaAs Heterojunctions . . . . .	37
2.7	Transverse Transport in Quantum-Well Superlattices . . . . .	45
2.8	Balance Equations for Transverse Transport in Tunneling Superlattices . . . . .	52
2.9	Transport in Quantum Wires . . . . .	59
2.9.1	Cylindrical quantum wires . . . . .	59
2.9.2	Harmonically confined quantum wires . . . . .	68
3.	Time-Dependent and High-Frequency Transport . . . . .	71
3.1	Balance Equations for Slowly Time-Dependent Transport . . . . .	71
3.2	Memory Effects in Transient Response for the Weak Current Case . . . . .	76
3.3	High-Frequency Small-Signal Conductivity . . . . .	80
3.3.1	The case of zero dc bias . . . . .	82
3.3.2	The case of finite dc bias . . . . .	84
3.4	Plasmon Contribution to High-Frequency Conductivity in Quasi-2D Systems and Superlattices . . . . .	90
3.5	High-Frequency Conductivity of Quantum Wires . . . . .	94
3.6	Nonlinear High-Frequency Conductivity . . . . .	101
3.6.1	Harmonic expansion method . . . . .	101
3.6.2	Nonlinear calculation without memory effect . . . . .	102
4.	Center-of-Mass Velocity Fluctuations, Noise and Diffusion . . . . .	109
4.1	Langevin-Type Equation . . . . .	109
4.2	Thermal Noise and Diffusion: General Relations . . . . .	112
4.3	Thermal Noise in Three-Dimensional Semiconductors . . . . .	115
4.3.1	3D degenerate systems, impurity and acoustic phonon deformation potential scatterings . . . . .	115
4.3.1.1	Finite (nonzero) lattice temperature . . . . .	116
4.3.1.2	Zero lattice temperature . . . . .	117
4.3.2	Nondegenerate 3D system, optic deformation potential scattering . . . . .	118
4.4	Quasi-2D Systems and Superlattices . . . . .	119
4.5	Effects of Velocity Fluctuation on the Drift Motion . . . . .	124

5.	Effects of Nonequilibrium and Confined Phonons	127
5.1	The Energy-Loss Rate of Electron Systems, Nonequilibrium Phonons . . . . .	127
5.2	Nonequilibrium Phonons in 3D Bulk Systems . . . . .	129
5.3	Semiconductor Superlattices, 3D Phonon Model . . . . .	135
5.4	Nonequilibrium Phonons in Quasi-Two-Dimensional Systems . . . . .	136
5.5	Semiconductor Superlattices, Quasi-2D Phonon Model . . . . .	142
5.6	Effect of Nonequilibrium Phonons on Hot-Electron Transport . . . . .	147
5.7	Confined Phonons in Quasi-2D Semiconductors . . . . .	155
6.	Systems with Several Species of Carriers	161
6.1	Balance Equations for Type-II Superlattices . . . . .	161
6.2	DC Steady State Transport . . . . .	165
6.3	Negative Minority-Electron Mobility in Electron-Hole Plasma . . . . .	169
6.4	Coulomb Drag between Two Semiconductor Layers, Transfer Resistivity . . . . .	171
6.5	High-Frequency Small-Signal Transport in Type-II Superlattices . . . . .	175
6.6	Multivalley Semiconductors, Systems of Several Carrier Species with Particle Interchange . . . . .	179
6.7	Balance Equations and Langevin Equations for Systems of Several Carrier Species . . . . .	183
6.8	DC Steady-State Transport in GaAs . . . . .	189
6.9	Quasi-Two-Dimensional Multiple Subband Systems . . . . .	195
6.9.1	Multisubband system treated as composed of multiple species of carriers . . . . .	195
6.9.2	Chemical potential difference considered for different subbands . . . . .	199
6.9.3	Effect of intersubband Coulomb interaction on transport . . . . .	203
6.9.4	$\delta$ -doped structures, electric-field induced real-space transfer . . . . .	206
6.9.5	Quasi-one-dimensional multiple subband systems . . . . .	213

6.10	Fluctuations and Diffusion Coefficients in Systems of Several Carrier Species with Particle Exchange . . . . .	216
6.10.1	Velocity and particle-number fluctuations . . . . .	216
6.10.2	Diffusion coefficients . . . . .	218
7.	Balance Equation Transport Theory and Electron Correlation	221
7.1	Full Quantum-Mechanical Treatment in the Laboratory Reference Frame . . . . .	221
7.2	Perturbation Expansion and Steady-State Balance Equations . . . . .	224
7.3	Isothermal and Adiabatic Resistivities . . . . .	230
7.4	Resistivity of Two-Subband System versus Interband Coulomb Interaction . . . . .	233
7.5	Boltzmann Equation with Electron–Electron Scattering . . . . .	236
7.6	Distribution Function in the Balance Equation Theory . . . . .	239
7.7	Coupled Force-Balance and Particle-Occupation Rate Equations . . . . .	245
8.	Balance Equation Approach to Magnetotransport	251
8.1	Balance Equations of Hot-Electron Transport in the Presence of a Magnetic field . . . . .	251
8.2	General Results of Steady-State Magnetotransport in Isotropic Bulk Systems . . . . .	258
8.3	Longitudinal Configuration . . . . .	261
8.3.1	Linear resistivity due to impurity scattering . . . . .	261
8.3.2	Resistivity due to optic phonon scattering, magneto-phonon resonance . . . . .	262
8.4	Transverse Configuration . . . . .	265
8.4.1	The logarithmic divergence of linear impurity resistivity and its nonlinear elimination . . . . .	266
8.4.2	Optic phonon scattering, magnetophonon resonance . . . . .	267
8.5	Small-Signal Transport in a Magnetic Field, Cyclotron Resonance . . . . .	270
8.5.1	Balance equations for high-frequency small-signal transport in a magnetic field . . . . .	270

8.5.2	High-frequency complex resistivity and complex conductivity in a magnetic field . . .	272
8.5.3	Cyclotron resonance . . . . .	274
8.6	Magnetotransport in Quasi-Two-Dimensional Systems .	277
8.6.1	Nonlinear resistivity tensor of 2D systems in Faraday configuration . . . . .	277
8.6.2	Density correlation function of 2D electron systems in a magnetic field, Landau level broadening . . . . .	279
8.6.3	Linear magnetoresistivity at low temperatures, Shubnikov de-Haas oscillation . . . . .	283
8.6.4	Magnetoresistance oscillations induced by direct current . . . . .	285
8.6.5	Linear magnetoresistance of GaAs heterojunctions in wide ranges of temperatures and magnetic fields . . . . .	289
8.7	Balance Equations of Two Species of Carriers in a Magnetic Field . . . . .	292
8.7.1	Type-II superlattices, electron-hole plasma . .	292
8.7.2	Weak magnetic-field expansion of two-dimensional density correlation function .	295
8.7.3	Transport behavior of two-subband systems and inter-subband Coulomb interaction . . . .	296
9.	Higher Order Scatterings and Alternative Formulations of Balance Equation Theory	301
9.1	General Forms of Balance Equations, Intracollisional Field Effect . . . . .	301
9.1.1	The frictional force and energy-loss rate in an electron-atom system, intracollisional field effect . . . . .	302
9.1.2	General forms of balance equations without intracollisional field effect . . . . .	305
9.1.3	Evaluation of the intracollisional field effect . .	307
9.2	Balance Equations in the CTPG Representation, Effects of Higher Order Scatterings . . . . .	309
9.2.1	Balance equations in the CTPG function representation . . . . .	310
9.2.2	Effect of an electric field on weak localization .	314

9.2.3	The phonon–plasma coupled mode and electron energy-loss rate . . . . .	318
9.3	Derivation of Force Balance Equation from Dielectric Response . . . . .	324
9.4	Nonequilibrium Statistical Operator Method . . . . .	326
9.5	Generalized Quantum Langevin Equation Approach . . . . .	328
9.6	Drifted Electron-Temperature Model . . . . .	330
10.	Weakly Nonuniform Systems, Hydrodynamic Balance Equations . . . . .	333
10.1	Hamiltonian of Small Fluid Elements . . . . .	334
10.2	Rates of Change of Particle Number, Momentum and Energy . . . . .	337
10.3	Hydrodynamic Balance Equations . . . . .	338
10.4	Thermoelectric Power . . . . .	340
10.5	Effect of Phonon Drag . . . . .	344
10.6	Onsager Relations and Hydrodynamic Balance Equations . . . . .	349
10.7	Carrier Transport in Semiconductor Devices . . . . .	353
10.7.1	Hydrodynamic equation and Poisson equation . . . . .	353
10.7.2	Simulation of transport process in 1D semiconductor devices . . . . .	357
11.	Balance Equations for Hot Electron Transport in an Arbitrary Energy Band . . . . .	361
11.1	Heisenberg Equation of Motion for Electrons in a Brillouin Zone . . . . .	362
11.1.1	Electrons in a periodical potential . . . . .	362
11.1.2	Single band subspace, rates of changes of momentum and energy . . . . .	365
11.1.3	The rate of change of the lattice momentum . . . . .	369
11.1.4	Derivation using effective Hamiltonian . . . . .	372
11.2	Initial Density Matrix and Distribution Function . . . . .	374
11.3	Momentum Balance Equation and Lattice Momentum Balance Equation . . . . .	379
11.3.1	Momentum and energy balance equations . . . . .	379
11.3.2	Lattice momentum and energy balance equations . . . . .	381

11.4	Boltzmann Equation and Balance Equation, Approximate Distribution Functions . . . . .	383
11.4.1	Derivation of momentum, lattice momentum and energy balance equations from Boltzmann equation . . . . .	383
11.4.2	Approximate distribution functions . . . . .	387
12.	Miniband Transport in Semiconductor Superlattices	391
12.1	Superlattice Miniband . . . . .	391
12.2	Esaki–Tsu Model of Miniband Transport . . . . .	393
12.2.1	The original analysis of Esaki and Tsu . . . . .	393
12.2.2	Calculation with carrier statistical distribution . . . . .	394
12.3	Boltzmann Equation with Relaxation Time Approximation . . . . .	397
12.3.1	One-dimensional theory . . . . .	397
12.3.2	Three-dimensional theory . . . . .	399
12.4	Superlattice Miniband Transport Treated with Momentum and Energy Balance Equations . . . . .	403
12.5	Superlattice Miniband Transport Treated with Lattice Momentum and Energy Balance Equations . . . . .	409
12.6	Comparison of Using Two Different Initial Distribution Functions . . . . .	412
12.7	Laterally Confined Superlattices . . . . .	415
12.7.1	The momentum and energy balance equations of a laterally confined superlattice . . . . .	416
12.7.2	DC steady state transport . . . . .	419
12.8	Transient and High-Frequency Transport in Superlattices . . . . .	423
12.8.1	The Transient response of a superlattice to a step electric field . . . . .	423
12.8.2	High-frequency small-signal transport . . . . .	428
12.8.3	High-frequency large-signal response . . . . .	431
12.9	Miniband Transport of Superlattices in a Quantized Magnetic Field, Magneto-Phonon Resonance . . . . .	435
12.10	Balance Equations for One-Dimensional Superlattices, Relaxation Time Approximation . . . . .	441
12.10.1	Balance equations for one-dimensional superlattices . . . . .	441

12.10.2	DC and small-signal solutions of one-dimensional balance equations for superlattices . . . . .	444
13.	Nonparabolic Systems with Magnetic field, Impact Ionization or under Nonuniform Condition . . . . .	449
13.1	Balance Equations for Electron Transport in an Arbitrary Energy Band in Crossed Magnetic and Electric Fields . . . . .	449
13.2	Examples of Quasi-Classical Magnetotransport in Arbitrary Energy Bands . . . . .	454
13.2.1	3D tight-binding systems . . . . .	454
13.2.2	Quantum-wire arrays . . . . .	458
13.2.3	Superlattice vertical transport in the presence of a transverse magnetic field . . . . .	461
13.3	Electronic Transport in Nonparabolic Kane Bands . . . . .	462
13.3.1	The Kane band model . . . . .	462
13.3.2	Hot-electron transport in Kane band systems . . . . .	464
13.3.3	Hall resistivity of hot-electron transport in nonparabolic Kane bands . . . . .	467
13.3.4	Transport of a Kane band system under a strong longitudinal magnetic field . . . . .	470
13.4	Transport Balance Equations for Nonparabolic Multiband Systems . . . . .	473
13.5	Applications of Nonparabolic Multiband Balance Equations . . . . .	478
13.5.1	High electric field transport in Si . . . . .	478
13.5.2	High electric field transport in GaAs . . . . .	482
13.5.3	Effect of high-lying minibands on superlattice longitudinal transport . . . . .	484
13.6	Balance Equations with Impact Ionization and Auger Recombination Processes . . . . .	489
13.6.1	Impact ionization and Auger recombination processes in semiconductors . . . . .	489
13.6.2	Balance equations with ionization and recombination processes . . . . .	493
13.6.3	Quasi-steady and steady transport under a constant electric field . . . . .	496

13.6.4	Multivalley balance equations with impact ionization . . . . .	499
13.7	Hydrodynamic Balance Equations for Systems with Arbitrary Energy Dispersion . . . . .	504
13.8	Modeling of Transport in Semiconductor Devices from Nonparabolic Band Material . . . . .	507
13.9	Instabilities in Superlattice Miniband Transport and Spatiotemporal Domains . . . . .	510
13.9.1	Hydrodynamic balance equations for superlattice miniband transport . . . . .	511
13.9.2	Analyses with small wave-like perturbations, convective and absolute instabilities . . . . .	513
13.9.3	Spatiotemporal domains in voltage-biased superlattices . . . . .	520
14.	Carrier Transport in Semiconductors Driven by THz Radiation Fields . . . . .	527
14.1	Balance Equations for Electron Transport in Semiconductors Driven by a THz Electric Field . . . . .	528
14.1.1	Center-of-mass and relative-electron variables in a uniform high-frequency electric field . . . . .	528
14.1.2	Momentum- and energy-balance equations under a high-frequency electric field . . . . .	532
14.2	Transport in Quasi-Two-Dimensional Semiconductors Irradiated by a THz Field . . . . .	536
14.2.1	Balance equations for THz-driven quasi-2D systems . . . . .	536
14.2.2	Transport of a GaAs-based quantum well irradiated by THz fields . . . . .	538
14.3	Miniband Transport in Semiconductor Superlattices Irradiated by THz Fields . . . . .	543
14.3.1	Balance equations for THz-driven electron transport in an arbitrary energy band . . . . .	543
14.3.2	Superlattice miniband transport subject to a strong THz field . . . . .	548
14.4	Nonlinear Free-Carrier Absorption of Intense THz Radiation in Semiconductors . . . . .	550
14.4.1	Nonlinear absorption coefficient of a THz radiation in a bulk semiconductor . . . . .	550

14.4.2	Absorption rate of a THz radiation passing through a 2D sheet . . . . .	554
14.5	Transport in Quasi-2D Semiconductors with Impact Ionization Irradiated by a Strong THz Field . . . . .	556
14.6	THz-Field-Driven Miniband Transport of a Superlattice in a Longitudinal Magnetic Field . . . . .	561
14.7	Extension to Radiation Fields of Lower Frequency . . .	565
15.	Radiation Driven Magnetotransport in Two-Dimensional Systems in Faraday Geometry . . . . .	573
15.1	Balance Equations for Radiation-Induced Magnetotransport in Two-Dimensional Electron Systems in Faraday Configuration . . . . .	574
15.1.1	Hamiltonian in terms of center-of-mass and relative electron variables . . . . .	574
15.1.2	Force- and energy-balance equations . . . . .	577
15.1.3	Density correlation function of 2D electrons in a magnetic field, Landau level broadening . . .	582
15.2	Nonlinear Cyclotron Resonance in Quasi-2D Systems .	584
15.2.1	Cyclotron resonance of drift velocity and dynamic conductivity . . . . .	584
15.2.2	Incident electromagnetic field, selfconsistent field and radiative decay . . . . .	586
15.2.3	Transmittance and Faraday effect . . . . .	587
15.2.4	Cyclotron resonance of electron heating and cooling . . . . .	592
15.2.5	Cyclotron resonance of THz photoconductivity at high temperatures . . . . .	593
15.3	Radiation-Induced Magnetoresistance Oscillations in High-Mobility Two-Dimensional Electron Systems at Low Temperatures . . . . .	597
15.3.1	Magnetoresistance oscillations under monochromatic irradiation . . . . .	598
15.3.2	Magnetoresistivity, electron temperature and energy absorption rate . . . . .	603
15.3.3	Vanishing linear photoresponse at cyclotron resonance and its harmonics at low temperatures . . . . .	606
15.3.4	Multiple and virtual photon processes . . . . .	609

15.3.5	Nonlinear magnetoresistivity and differential magnetoresistivity . . . . .	611
15.4	Magnetoresistance Oscillations under Bichromatic Irradiation in Two-Dimensional Electron Systems . . .	617
	<i>Bibliography</i>	623
	<i>Index</i>	633
