

Contents

Foreword	vii
Acknowledgements	ix
Chapter 1 Overview	1
Trains of Thought	3
Chapter 2 1952	11
Portfolio Selection	15
The Early History of Portfolio Theory 1600–1960	31
The Utility of Wealth	43
Chapter 3 Rand [I] and The Cowles Foundation	51
Industry-wide, Multi-industry and Economy-wide Process Analysis	53
Alternate Methods of Analysis	85
The Elimination Form of the Inverse and its Application to Linear Programming	99
The Optimization of a Quadratic Function Subject to Linear Constraints	115
The General Mean-variance Portfolio Selection Problem	139
Chapter 4 Rand [II] and CACI	147
Simulating with SIMSCRIPT	155
Programming by Questionnaire	165
SIMSCRIPT	211
Barriers to the Practical Use of Simulation Analysis	271
Chapter 5 IBM's T. J. Watson Research Center	279
Approximating Expected Utility by a Function of Mean and Variance	281
Mean-variance Versus Direct Utility Maximization	293
The Value of a Blank Check	309
The “Two beta” Trap	319
Portfolio Analysis with Factors and Scenarios	329
Sparsity and Piecewise Linearity in Large Portfolio Optimization Problems	337

The ER and EAS Formalisms for System Modeling and the EAS-E Language	357
EAS-E: An Integrated Approach to Application Development	377
The System Architecture of EAS-E: An Integrated Programming and Database Language	405
Samuelson and Investment for the Long Run	417
Investment for the Long Run: New Evidence for an Old Rule	429
Chapter 6 Baruch College (CUNY) and Daiwa Securities	443
Investment Rules, Margin and Market Volatility	445
Risk Adjustment	453
Normative Portfolio Analysis: Past, Present and Future	467
Individual versus Institutional Investing	473
Foundations of Portfolio Theory	481
Fast Computation of Mean-variance Efficient Sets Using Historical Covariances	491
Computation of Mean-semivariance Efficient Sets by the Critical Line Algorithm	507
Data Mining Corrections	519
Chapter 7 Harry Markowitz Company	529
The Likelihood of Various Stock Market Return Distributions: Part 1: Principles of Inference	531
The Likelihood of Various Stock Market Return Distributions: Part 2: Empirical Results	545
Resampled Frontiers Versus Diffuse Bayes:	573
An Experiment On Socks Ties and Extended Outcomes	591
Single-Period Mean-variance Analysis in a Changing World	601
Financial Market Simulation	615
Portfolio Optimization with Factors, Scenarios and Realistic Short Positions	627
Market Efficiency: A Theoretical Distinction and So What?	641
Efficient Portfolios, Sparse Matrices, and Entities: A Retrospective	661
DeFinetti Scoops Markowitz	669
CAPM Investors Do Not Get Paid for Bearing Risks: <i>A Linear Relation Does not Imply Payment for Risk</i>	697
