<i>Preface</i>	v
I GENERAL ISSUES	1
1. The Nature and Significance of Resource and Environmental Economics	3
1.1. Introduction	3
1.2. How are the Subjects of Economics, Natural Resource Economics, Environmental Economics and Ecological Economics Related to One Another?	4
1.2.1. The subject matter of economics	4
1.2.2. The nature and coverage of natural resource economics, environmental economics and ecological economics	5
1.3. Further Observations on the Development of Economic Thought about the Significance of Natural Resources and Environmental Conditions	9
1.3.1. Changing emphasis on the relevance of natural resources for economic growth and scarcity	9

1.3.2.	Changing emphasis on the significance of material versus nonmaterial goods for economic welfare	11
1.4.	Notes on the Coverage in this Book of Modern Issues in Resource and Environmental Economics	13
1.5.	Concluding Comments	14
1.6.	Keywords	15
1.7.	Questions for Review and Discussion	15
	Readings and References	16
2.	Different Types of Approaches to Environmental and Resource Economics	21
2.1.	Introduction	21
2.2.	Neoclassical Economics and Environmental and Resource Economics	23
2.3.	New Institutional Economics	27
2.4.	Behavioral and Psychological Economics	31
2.5.	Conventional (Old) Institutional Economics	36
2.6.	The Austrian School of Economics	41
2.7.	Game Theory and Some of Its Applications to Environmental Conflict	42
2.7.1.	A prisoners' dilemma problem	43
2.7.2.	A game involving a battle of the sexes — further application	44
2.7.3.	Games against nature and environmental outcomes	45
2.8.	Evolution, Coevolution and Limits to Economic Growth Imposed by Natural Resource and Environmental Constraints	50
2.8.1.	Evolutionary economics and the environment	50
2.8.2.	Coevolution of economic practices, social systems and environmental conditions	51
2.8.3.	Limits to economic growth	51

2.9.	Concluding Comments	53
2.10.	Keywords	54
2.11.	Questions for Review and Discussion	54
	Readings and References	57
3.	Economic Failure in Using Natural Resources and the Environment	63
3.1.	Introduction	63
3.2.	Identifying Economic Failures and Measuring Economic Loss	65
3.2.1.	Pareto optimality	65
3.2.2.	Taking account of future economic scarcity	66
3.2.3.	Pareto's criterion and the criterion of a potential Paretian improvement	69
3.3.	Markets and Economic Failure	70
3.3.1.	Economic failure generally	70
3.3.2.	Externalities, particularly environmental spillovers	71
3.3.3.	Uncertainty and market failure	77
3.3.4.	Public goods, mixed goods and quasi-public goods	79
3.3.5.	Open-access commodities and those for which there is excludability but no rivalry	85
3.3.6.	Monopolies	86
3.4.	Political and Administrative Mechanisms and Economic Failures	86
3.4.1.	Failure of majority voting to bring about a Paretian optimum	87
3.4.2.	Special interest pressure groups	88
3.4.3.	Prevalence of myopic and reactive rather than pro-active behavior by governments	90
3.4.4.	Failures in public administration	91

3.5.	Conclusions	92
3.6.	Keywords	94
3.7.	Questions for Review and Discussion	94
	Readings and References	97
4.	Property Rights, Laws, Markets and Resource Use	99
4.1.	Introduction: General Views about Property Rights, Justice and Economic Efficiency	99
4.2.	Private Property Rights and Other Forms of Property Rights	103
4.3.	Private Property Rights and the Efficient Operation of Market Systems	106
4.4.	The Economics of Creating Private Property . .	108
4.5.	Common Property	110
4.6.	Open-Access Resources	112
4.6.1.	The nature of open-access resources . .	112
4.6.2.	Inefficiency of open-access resource use — resource misallocation	113
4.6.3.	Failure to achieve adequate conservation of natural resources when there is open-access	116
4.6.4.	Perverse responses to market signals and biodiversity loss as a result of open-access	116
4.6.5.	Another perspective on the over exploitation of natural resources when open-access occurs	118
4.6.6.	Limitations in applying this model in less developed countries	123
4.6.7.	Other economic failures associated with open-access resources	125
4.7.	The Taking of Property Rights and Natural Resource Interests	126
4.8.	Concluding Comments	128

4.9. Keywords	128
4.10. Questions for Review and Discussion	129
Readings and References	131
5. Regulating Natural Resource Use and Pollution Emissions	135
5.1. Introduction	135
5.2. Taxes or Charges on Pollution Emissions and on Waste Disposal	136
5.2.1. A simple model	136
5.2.2. Limitations of the simple model and their policy consequences	138
5.2.2.1. Lack of attention to dynamics and user costs	139
5.2.2.2. External environmental impacts modeled as a global or localized pure public bad	140
5.2.2.3. Income distribution consequences of environmental regulation are not assessed	141
5.2.2.4. Uncertainty about the costs and benefits of environmental regulation and about how external economic effects should be evaluated	143
5.2.2.5. Government regulators may not always try to adopt efficient economic pricing of pollution emissions via taxes or charges and therefore, transaction costs of regulation could be high	145

5.2.2.6.	A system of taxes or charges on adverse environmental externalities encourages research and innovations designed to reduce negative environmental spillovers	146
5.2.2.7.	Government taxes or charges on pollution emissions may be inflexible	146
5.3.	Tradable Permit Systems for Pollution Emissions and Waste Disposal	147
5.4.	Subsidies for Pollution Reduction	152
5.5.	The Policy of Clearly Defining Property Rights Combined with Bargaining or the Legal Settlement of an Environmental Dispute	152
5.6.	Administrative Rules or Fiat as an Environmental Control Measure	153
5.7.	Zoning of Polluting Activities Having External Environmental Consequences	154
5.7.1.	Introduction	154
5.7.2.	Zoning of incompatible activities	154
5.7.3.	Cases where external pollution damage depends only on the distance between emitters and potential receptors	157
5.7.4.	Should polluting activities be concentrated by location or dispersed?	158
5.7.5.	Geographical influences	159
5.8.	The Economic Incidence of Environmental Regulations	159
5.8.1.	Introduction	159
5.8.2.	Implications of the Pigovian approach to environmental policy	160
5.8.3.	The incidence of non-Pigovian policies for environmental regulation	163
5.9.	Regulating the Use of Open-Access Resources	166
5.9.1.	Introduction	166

- 5.9.2. Taxes and charges as a means to govern
the use of shared natural resources 167
- 5.9.3. The use of tradable permits 170
- 5.9.4. Subsidies to refrain from
resource use 171
- 5.9.5. The creation of private property
rights 172
- 5.9.6. Administrative or communal rules 172
- 5.9.7. Zoning and shared natural
resources 173
- 5.10. Regulating the Use of Shared Natural Resources
that Supply Mixed Goods 174
- 5.11. Concluding Comments 175
- 5.12. Keywords 176
- 5.13. Questions for Review and Discussion 176
- Readings and References 180

**6. Economic Valuation of Environmental Spillovers
and Natural Resources 183**

- 6.1. Introduction 183
- 6.2. The Basic Ideas Behind Social Cost–Benefit
Analysis 184
 - 6.2.1. A simple illustration 184
 - 6.2.2. Some complications 186
- 6.3. Normative and Philosophical Matters as well
as a Measurement Issue 187
 - 6.3.1. Ethical and normative assumptions
underlying economic valuation 187
 - 6.3.2. A measurement issue 189
- 6.4. Steps in Applying Social Cost–Benefit Analysis to
the Valuation of Environmental Spillovers
and to the Valuation of Natural Resources 190
 - 6.4.1. Identifying and measuring impacts 190

6.4.2.	Identifying the economic nature of the components of environmental spillovers and of natural resources	191
6.4.3.	Confidence in estimates of economic value and sensitivity of returns	193
6.5.	Allowing for the Time Dimension in the Process of Valuation	194
6.6.	Cases in which Market-Based Valuation of Environmental Spillovers and Natural Resource Use is Possible	195
6.6.1.	Simple market-based valuations	196
6.6.2.	A more complicated case involving a change in the market price of a product adversely affected by an environmental externality	198
6.6.3.	Valuing marketed natural resources that do not generate significant environmental spillovers	201
6.7.	Introduction to Methods of Valuing Nonmarketed Commodities	203
6.8.	The Travel Cost Method of Economic Valuation	205
6.8.1.	Background about this method	205
6.8.2.	Procedures for applying the travel cost method of valuation	206
6.8.3.	Some limitations of the travel cost method	209
6.9.	Hedonic Pricing as a Valuation Method	210
6.10.	Contingent Valuation — A Stated Preference Approach	212
6.10.1.	The basics of contingent valuation	212
6.10.2.	Variations in procedures for estimating contingent values — single bids, multiple bids, bounded bids	213
6.10.3.	Issues raised by procedures used to estimate contingent values	215

6.11.	Choice Modeling — Stated Preferences Based on Attributes or Characteristics of Commodities	218
6.12.	Other Evaluation and Valuation Methods	221
6.12.1.	Multi-attribute choice models	221
6.12.2.	Citizens' juries	222
6.12.3.	Cost-effectiveness analysis	223
6.12.4.	Cost of replacement of a natural resource as an evaluation technique	223
6.13.	Concluding Comments	224
6.14.	Keywords	225
6.15.	Questions for Review and Discussion	225
	Readings and References	227
7.	Sustainability as an Environmental and Economic Issue	231
7.1.	Introduction	231
7.2.	Why has Environmental and Economic Sustainability Become an Important Issue?	233
7.2.1.	Human dependence on natural resources	233
7.2.2.	Historical impacts of humans on natural environments and resources as a reason for concern	234
7.2.3.	Interdependence between economic systems and natural resource systems	235
7.2.4.	Environmental Kuznets curves	238
7.2.5.	Export of polluting economic activities	240
7.3.	Types of Material Resources, Particularly Natural Resources, and Their Implications for Economic Sustainability	242
7.3.1.	A classification of material resources	242
7.3.2.	Biological resources and economic sustainability	243

7.3.3.	Replenishable nonbiological natural resources and those not subject to significant depletion	245
7.3.4.	Nonrenewable nonbiological resources which are depletable, for example, minerals	246
7.3.5.	Physical man-made capital and human capital	250
7.4.	Microeconomic Phenomena Resulting in a Lack of Economic Sustainability	251
7.5.	Sustainable Development	253
7.6.	Concluding Comments	256
7.7.	Keywords	258
7.8.	Questions for Review and Discussion	258
	Readings and References	260

II MORE SPECIFIC TOPICS 263

8.	Agriculture, Agricultural Policies and the Environment	265
8.1.	Introduction	265
8.2.	General Impacts of Agricultural Development on the Environment and on the Availability of Natural Resources	266
8.2.1.	Broad environmental concerns	266
8.2.2.	Demand for agricultural production expected to increase substantially	269
8.3.	Market Failures Involving Agriculture and Their Implications for the Environment and Resource Use	269
8.3.1.	Background	269
8.3.2.	Environmental spillovers and agriculture	270
8.3.3.	Use by agriculturalists of open-access natural resources	273

8.3.4.	Consequences of agricultural development for the supply of commodities with public goods attributes	274
8.4.	Factors Leading to a Lack of Agricultural Sustainability	276
8.4.1.	Market factors as a source of lack of agricultural sustainability	276
8.4.2.	Lack of agricultural sustainability due to factors other than market failures	276
8.5.	Impacts of Agricultural Policies on the Environment and Natural-Resource Use	278
8.5.1.	Adverse environmental externalities from agriculture and government subsidies for agricultural production	278
8.5.2.	Favorable environmental spillovers from agriculture and public policy	281
8.5.3.	Agricultural policy and the conservation of natural resources	283
8.6.	Concluding Comments	283
8.7.	Keywords	284
8.8.	Questions for Review and Discussion	285
	Readings and References	286
9.	Water Management	289
9.1.	Introduction	289
9.2.	Scarcity and the Demand for the Available Quantity of Freshwater	290
9.3.	Economic Failures in Allocating Scarce Water Resources	293
9.3.1.	Background	293
9.3.2.	The most economic allocation of water in any time period	294
9.3.3.	The intertemporal allocation of water	296

9.4.	Mechanisms for the Management of the Available Quantity of Water	298
9.4.1.	Background	298
9.4.2.	Administrative control of the quantity of water used by different entities or for different purposes	299
9.4.3.	Administered prices for water-use	299
9.4.4.	Tradable permit systems for water-use	303
9.5.	Transboundary Use of Water	305
9.6.	Water for Nature Conservation and for Nonmarketed Uses	308
9.7.	Water Pollution and Water Quality	309
9.7.1.	General aspects	309
9.7.2.	Controlling water pollution and managing water quality	310
9.8.	The Economics of Investments to Supplement Available Water Supplies	313
9.8.1.	General Aspects	313
9.8.2.	Water recycling and desalinization	313
9.8.3.	Diversion of water and the pooling of water resources	315
9.8.4.	The provision of dams and weirs	316
9.9.	Concluding Comments	317
9.10.	Keywords	318
9.11.	Questions for Review and Discussion	319
	Readings and References	321
10.	Biodiversity Conservation	323
10.1.	An Introduction to the Relationship between Biodiversity and Economics	323
10.2.	The Concept of Biodiversity and the Measurement of Biodiversity	325
10.3.	Why Does Biodiversity have Economic Value?	326
10.4.	Factors Causing Changes in Biodiversity	331

10.4.1.	General aspects	331
10.4.2.	Nonanthropogenic causes of alterations in biodiversity	332
10.4.3.	Anthropogenic (mainly economic) impacts on the biological diversity of wild organisms	333
10.4.4.	Anthropogenic impacts on the biodiversity of cultured organisms	333
10.5.	Policies to Promote Biodiversity	
	Conservation	337
10.5.1.	An overview	337
10.5.2.	Restriction of market operations as a conservation measure	338
10.5.3.	Encouraging market operations in order to conserve species	340
10.5.4.	Measures designed to make biodiversity conservation independent of market forces	342
10.5.5.	An overall perspective	344
10.6.	Human Development of the Genetic Stock Including Genetically Engineered Organisms	344
10.6.1.	General features	344
10.6.2.	Property rights in genetic material and in methods of engineering genetic material	348
10.7.	Concluding Observations	351
10.8.	Keywords	354
10.9.	Questions for Review and Discussion	354
	Readings and References	356
11.	Global Warming, Energy Use and Air Pollution	359
11.1.	Introduction	359
11.2.	Sources of Energy Supply and Issues Involved in Managing this Supply	361
11.2.1.	The basics	361

11.2.2.	The composition of energy supplies used by humans in electricity and heat production and consumption	362
11.2.3.	Some of the issues involved in managing energy supplies	364
11.3.	Global Reduction in Air Quality — Ozone Layer Depletion and Global Warming	368
11.3.1.	General observations	368
11.3.2.	Do global reductions in air quality due to human activity provide incentives for collective regulatory action?	368
11.3.3.	Ozone layer depletion	372
11.3.4.	Global warming — its basic causes and its predicted consequences	373
11.4.	The Economic Impacts of Global Warming and Policies to Address It	376
11.4.1.	Estimating the economic costs of global warming and the net benefits of controlling it	376
11.4.2.	International agreements and global warming	382
11.5.	Economic Methods of Regulating Greenhouse Gas Emissions and Global Warming	384
11.5.1.	Mitigation versus adjustment and other general issues	384
11.5.2.	Taxes on greenhouse gas emissions	386
11.5.3.	Tradable permits for greenhouse gas emissions	387
11.5.4.	Who pays for reductions in emissions of greenhouse gases?	389
11.6.	Local and Regional Air Pollution, Including Regional Transboundary Pollution	390
11.6.1.	Background	390
11.6.2.	Local air pollution	391

11.6.3. Regional air pollution including transboundary or transfrontier air pollution	392
11.7. Concluding Comments	396
11.8. Keywords	398
11.9. Questions for Review and Discussion	398
Readings and References	401
12. Recycling and Solid Waste Management	405
12.1. Introduction	405
12.2. Why should Wastes and Economic Products be Recycled? What Factors Influence the Extent of Recycling?	406
12.2.1. Reasons for recycling	406
12.2.2. A simple model of the private economics of recycling	407
12.3. Adjusting the Simplified Recycling Model to Allow for Market Failures	409
12.4. Some Additional Factors That Ought to Be Taken into Account in Modeling the Economics of Recycling	411
12.4.1. Introductory observations	411
12.4.2. Markets for recyclable wastes	411
12.4.3. Decisions of individuals about supplying wastes for recycling	414
12.4.4. Some additional factors that influence the extent of recycling	416
12.5. The Management of the Disposal of Garbage (Trash) by Local Governments	416
12.5.1. Marginal cost pricing of garbage disposal	416
12.5.2. Limitations of the above model	418
12.5.3. Institutional measures to increase the economic efficiency of garbage disposal, for example, contracting out	419
12.6. “Substitutes” for Recycling and Waste Creation	421

12.7.	Policy Perspectives	423
12.7.1.	Some relevant observations	423
12.7.2.	Why might consumers have limited control over the type and amount of wastes generated by their purchases?	424
12.7.3.	To what extent should the producers of products be made responsible for the wastes generated by their products rather than consumers or other buyers of these products?	427
12.8.	Concluding Comments	428
12.9.	Keywords	429
12.10.	Questions for Review and Discussion	430
	Readings and References	431
13.	Health and Environmental Economics	433
13.1.	Introduction	433
13.2.	Basic Considerations in the Economic Assessment of Environmental Health Policies	434
13.2.1.	The necessity of economic trade-offs	434
13.2.2.	Factors that can be controlled to influence environmental health and their economic implications	436
13.3.	Economic Failures and Environmental Health	437
13.3.1.	Environmental spillovers or externalities	437
13.3.2.	Public goods or bads and environmental health	439
13.3.3.	Ignorance, behavioral variations and public health concerns	439
13.4.	Production Functions, the Cost Effectiveness of Environmental Health Interventions and Maximization of Net Benefits	440
13.4.1.	Single output–single variable input production functions	440

13.4.2.	Isoquants — production functions involving multiple inputs	443
13.4.3.	Isocosts	445
13.4.4.	Cost effectiveness	446
13.4.5.	Expansion paths, total costs and health benefits	447
13.5.	Assignment of Monetary Benefits to the Valuation of the Avoidance of Ill-Health	450
13.5.1.	Monetary values facilitate social cost–benefit analysis	450
13.5.2.	The economic value of expected longevity	451
13.5.3.	The economic value of avoiding morbidity	454
13.5.4.	Quality-adjusted-life years (QALYs) . . .	455
13.5.5.	Further evaluation considerations	456
13.6.	Chemical and Physical Substances in the Environment and the Economic Consequences of Their Health Impacts — Empirical Applications	457
13.6.1.	The purpose of this section	457
13.6.2.	Air quality in Los Angeles	457
13.6.3.	The economic costs of air pollution in the USA	459
13.6.4.	Pollution of water and air by the release of cadmium from a smelter in China	460
13.6.5.	Water pollution in South Asia by arsenic	460
13.6.6.	Additional observations on water quality and health	461
13.7.	Economic Considerations and Ecological and Biological Influences on Environmental Health	462
13.7.1.	Background	462
13.7.2.	Economic assessment of vaccination programs — existing analysis	463

13.7.3. A different possibility to that outlined above — a case in which eradication is an economic option	465
13.7.4. Adverse health externalities — excessive use of antibiotics and measures to reduce contagion of diseases	467
13.8. Concluding Observations	468
13.9. Keywords	469
13.10. Questions for Review and Discussion	470
Readings and References	472
<i>Index</i>	475
