Preface	v
1. Control of Robots in Contact Tasks: A Survey	1
1.1 Introduction	1
1.2 Contact Tasks	1
1.3 Classification of Constrained Motion Control Concepts	2
1.4 Model of the Robot Performing Contact Tasks	10
1.5 Passive Compliance Methods	14
1.5.1 Non-adaptable compliance methods	14
1.5.2 Adaptable compliance methods	15
1.6 Active Compliant Motion Control Methods	18
1.6.1 Impedance control	18
1.6.1.1 Force-based impedance control	22
1.6.1.2 Position-based impedance control	24
1.6.1.3 Other impedance-control approaches	27
1.6.2 Hybrid position/force control	28
1.6.2.1 Explicit force control	30
1.6.2.2 Position-based (implicit) force control	37
1.6.2.3 Other force control approaches	39
1.6.3 Force-impedance control	40
1.6.4 Unified position-force control	43
1.7 Contact Stability and Transition	46
1.8 Compliance Planning	56
1.9 Haptic Systems Control	60
1.10 New Robot Application	64
1.11 Conclusion	65
Bibliography	67
2. A Unified Approach to Dynamic Control of Robots	77
2.1 Introduction	77
2.2 Dynamic Environments	80
2.2.1 Model of a dynamic environment	81
2.2.1.1 Kinematic-dynamic constraints	82
2.2.1.2 Pure dynamic environment	82
2.2.1.3 Linear impedance model	83
2.3 Synthesis of Control Laws for the Robot Interacting with Dynamic Environment ...	84
2.3.1 Stabilization of motion with the preset quality of transients	86
2.3.2 Stabilization of interaction force with the preset quality of transients	91
2.3.3 Concluding discussion	100

2.4	Analysis of Transient Processes.....	101
2.4.1	Task setting.....	102
2.4.2	Motion transient processes.....	104
2.4.3	Force transient processes.....	110
2.4.4	Numerical example.....	119
2.4.5	Effect of sensor errors on the transient processes.....	121
2.5	Adaptive Stabilization of Motion and Forces.....	128
2.5.1	Introduction.....	128
2.5.2	Task setting.....	129
2.5.3	General scheme of robot adaptive control in contact tasks.....	134
2.5.4	Adaptive stabilization of programmed motions and forces.....	139
2.6	Position-Force Control – A Generalization.....	146
2.6.1	Models of robot and environment dynamics. Task setting.....	146
2.6.2	Control laws stabilizing the interaction force.....	149
2.6.3	Example.....	155
2.6.4	Conclusion.....	157
2.7	Position-Force Control in Cartesian Space.....	158
2.7.1	Introduction.....	158
2.7.2	Task setting.....	159
2.7.3	Relation to previous results.....	160
2.7.4	Control laws for specified force dynamics.....	161
2.7.5	Example.....	166
2.7.6	Conclusion.....	169
2.8	New Realization of Hybrid Control.....	170
2.8.1	Introduction.....	170
2.8.2	Revised hybrid control procedure.....	173
2.8.3	Case study.....	177
2.9	Impedance Control – A Special Case of the Unified Approach.....	182
2.9.1	Introduction.....	182
2.9.2	Improved impedance control.....	182
2.9.3	Case study.....	186
2.9.4	Concluding remarks.....	190
2.10	Stability of Robots Interacting with Dynamic Environments.....	191
2.10.1	Introduction.....	191
2.10.2	Practical stability of robots interacting with dynamic environment.....	194
2.10.3	Mathematical model.....	195
2.10.4	Formulation of the control task.....	196
2.10.5	Control law.....	198
2.10.6	Practical stability analysis.....	199
2.10.7	Example.....	203
2.10.8	Conclusion.....	207
2.10.9	Practical stability - A remark.....	208
Appendix A	Proof of Theorem 1.....	211
Appendix B	Proof of Theorem 2.....	215
Appendix C	Proof of Theorem 3.....	217
Appendix D	Proof of Theorem 4.....	219
Appendix E	Proof of Theorem 5.....	221
Appendix F	Proof of Theorem 6.....	223
Appendix G	Proof of Lemma.....	225

Appendix H	Proof of Theorem 7	229
Appendix I	Some Basic Relations	232
Appendix J	Proof of Theorem 8	237
Appendix K	Prior Assertions and Proof of Theorem 10	242
	Bibliography	250
3.	Impedance Control	255
3.1	Introduction	255
3.2	Control Objectives	256
3.3	Impedance Control Scheme	261
3.4	Impedance Control Synthesis	266
3.4.1	Effects of impedance control	267
3.4.2	Common impedance control law	268
3.4.3	Interactive system behavior - coupled stability	269
3.4.3.1	Linearized interaction models	270
3.4.3.2	Coupled system stability	272
3.4.3.3	Coupling of passive systems	277
3.4.3.4	Robust coupled system stability	280
3.4.3.5	Coupled system performance	284
3.4.3.6	Performance of the controller $G_f = G_r^{-1}$	287
3.5	Improved Impedance Control	288
3.5.1	Improved control law	290
3.5.2	Coupled system performance	294
3.5.3	Target impedance model realization	296
3.6	Typical Impedance Contact Behavior	301
3.7	Contact Transition Stability	319
3.7.1	Definition of the contact stability	320
3.8	Contact Stability Conditions	332
3.8.1	Time domain analysis	333
3.8.1.1	Constant velocity phase contact	335
3.8.1.2	Constant acceleration/deceleration phase contact	339
3.8.2	Passivity-based contact transition stability analysis	340
3.8.3	Robust transition stability - generalized contact stability	344
3.8.4	Equivalence of robust- and passivity-based contact stability	347
3.9	Influence of Non-Linear Effects on Contact-Stability	351
3.9.1	Coulomb's friction	351
3.9.2	Control lags and sampling effects	352
3.9.2.1	Ideal target system with force delay	354
3.9.2.2	Robust and passivity-based contact stability of discrete-time system	365
3.9.2.3	Contact stability of sampled-data system	369
3.10	Evaluation of Contact Transition Stability Conditions	375
3.10.1	Contact transition performance indices	379
3.10.2	Contact transition assessment	381
3.10.3	Upper limits on target impedance frequency	394
3.11	Conclusion	398
	Bibliography	401

4.	Practical Synthesis of Impedance Control	405
4.1	Introduction	405
4.2	Influence of the Target Parameters on the Impedance Control Performance.....	406
4.2.1	Influence of target frequency and mass on contact transition	406
4.2.2	Reduction of force overshoots – Hogan’s target impedance model (generalized stiffness control).....	409
4.3	Selection of Target Impedance Parameters – Impedance Control Design at Lower Control Layer	414
4.3.1	Specification of impedance control geometry	416
4.3.2	Specification of input design parameters - user interface.....	426
4.3.3	Design algorithm.....	431
4.4	Synthesis of Impedance Control at Higher Layers	451
4.4.1	World model for the impedance control	452
4.4.2	Impedance control integration into forward industrial robot position control	457
4.4.3	Impedance control functions and algorithms	461
4.4.3.1	End-effector position modification.....	461
4.4.3.2	Selection and initialization of impedance gain parameters.....	463
4.4.3.3	Computation of path correction.....	463
4.4.3.4	Delta x to delta T transformation (deltax_2_deltaT)	464
4.4.3.5	Compensation for payload and inertial effects	465
4.4.3.6	Sensor frame to compliance frame transformation (Sf2cf).....	466
4.4.3.7	Force setpoint check.....	467
4.4.3.8	Force sensor data preprocessing	467
4.4.3.9	Contact check	468
4.4.4	Higher control layers algorithms.....	468
4.4.4.1	Impedance control operating modes	468
4.4.4.2	Change of impedance gains (relax)	469
4.4.5	Actions and tasks control algorithms	471
4.4.5.1	Grasping/detach action	473
4.4.5.2	Insertion/extraction.....	476
4.5	Conclusion.....	485
	Bibliography.....	487
5.	Robust Control of Human-Robot Interaction in Haptic Systems	491
5.1	Introduction	491
5.2	Haptic System Structures.....	492
5.3	Haptic Rendering.....	496
5.4	Robust Control of Haptic Systems Interaction	498
5.4.1	Admittance display control	499
5.4.2	Impedance display control	510
5.5	Conclusion.....	516
	Bibliography.....	517
6.	Intelligent Control Techniques for Robotic Contact Tasks	519
6.1	Introduction	519
6.2	The Role of Learning in Intelligent Control Algorithms for Compliant Tasks	523
6.3	A Survey of Intelligent Control Techniques for Robotic Contact Tasks	532

6.4	The Synthesis of New Connectionist Learning Control Algorithms for Robotic Contact Tasks.....	552
6.4.1	The background of the new connectionist control synthesis.....	552
6.4.2	Model of robot interacting with dynamic environment – task setting.....	554
6.4.3	Factors affecting task performance and stability in robotic compliance control.....	557
6.4.4	The comprehensive connectionist control algorithm based on learning and classification for compliance robotic tasks.....	559
6.4.5	The genetic-connectionist algorithm for compliant robotic tasks	567
6.4.6	GA tuning of PI force feedback gains.....	569
6.4.7	Case studies.....	570
6.5	Connectionist Reactive Control for Robotic Assembly Tasks by Soft Sensored Grippers	575
6.5.1	Analysis of the assembly process with soft fingers.....	577
6.5.2	Assembly process.....	578
6.5.3	Learning compliance methodology by neural networks	579
6.5.4	Experimental results.....	580
6.6	Intelligent Control of Contact Tasks in Humanoid Robotics.....	584
6.6.1	Introduction.....	584
6.6.2	Definition of control problem and advanced control methods for humanoid robots	587
6.6.3	The model of the system	593
6.6.3.1	Model of the robot’s mechanism	593
6.6.3.2	Definition of control criteria.....	594
6.6.3.3	Gait phases and indicator of dynamic balance.....	596
6.6.4	Hybrid integrated dynamic control algorithm with reinforcement structure.....	598
6.6.4.1	Dynamic controller of trajectory tracking	600
6.6.4.2	Compensator of dynamic reactions based on reinforcement learning structure	601
6.6.4.3	Impact-force controller.....	605
6.6.4.4	Conflict between controllers.....	606
6.6.5	Simulation studies	608
6.7	Conclusion.....	616
	Bibliography.....	618
	Instead of Conclusion	625
	Index	629
