Preface	xv
List of Symbols	xix
Acronyms	xxv
Introduction	xxvii
1 Overview of Enteric Neurobiology	1
1.1 The Role of the Gut	1
1.2 Regional Function in the Human Gut	3
1.3 The Intrinsic Innervation of the Gut	6
1.4 Gastrointestinal Smooth Muscle	9
1.5 Extrinsic Innervation	11
1.6 The Effect of Food on the Gut	13
1.7 Clinical Pharmacology	17
2 Myoelectrical Activity of the Smooth Muscle	20
2.1 Myoelectrical and Mechanical Activity	20
2.1.1 Biological Background	21
2.1.2 Mathematical Model	25
2.1.3 Numerical Algorithm	30
2.1.4 Physiological Response	34
2.1.5 Effect of Increase in \tilde{g}_{Ca}^L	35
2.1.6 Effect of Increase in \tilde{g}_{Ca-K} and \tilde{g}_{Ca}^T	36
2.1.7 Effect of Cyclic Changes in \tilde{g}_{Ca}^T	38

2.1.8	Effect of Increase in \tilde{g}_{Ca}^L and \tilde{g}_{Ca}^T	40
2.1.9	Effect of Increase in \tilde{g}_{Ca-K} and Decrease in \tilde{g}_{Ca}^T	41
2.1.10	Remarks	41
2.2	Effects of Ion Channel Modulators	44
2.2.1	Biological Background	44
2.2.2	Effect of Forskolin	45
2.2.3	Effect of Lemakalim	46
2.2.4	Effect of High Concentration of External K_m^+	46
2.2.5	Effect of Phencyclidine	48
2.2.6	Effects of Selective K^+ -Channel Agonists/ Antagonists	49
2.2.7	Remarks	52
3	Pharmacology of Myoelectrical Activity	56
3.1	Effects of Specific Inhibitors of the Ca^{2+} -ATPase and the Ryanodine-Sensitive Ca^{2+} Channels of the Sarcoplasmic Reticulum	56
3.1.1	Effects of Cyclopiazonic Acid	57
3.1.2	Effects of Cyclopiazonic Acid and Ryanodine	60
3.1.3	Effects of Cyclopiazonic Acid and Non-Selective Ca^{2+} Channel Antagonists	60
3.1.4	Effects of Cyclopiazonic Acid and Selective Ca^{2+} Channel Antagonists	61
3.1.5	Effects of Thapsigargin, Non-Selective and Selective Ca^{2+} Channel Antagonists, and Ryanodine	63
3.1.6	Effects of Thapsigargin and High $[Ca^{2+}]_0$	66
3.1.7	Effects of Thapsigargin, High $[Ca^{2+}]_0$, $[K^+]_0$ and Selective Ca^{2+} Channel Antagonists	69
3.2	Effects of 1,4-dihydropyridine Enantiomers (-)-(S)-Bay K 8644 and (+)-(R)-Bay K 8644	71
3.2.1	Effects of (-)-(S)-Bay K 8644	71
3.2.2	Effects of (-)-(S)-Bay K 8644 and High $[K^+]_0$	73
3.2.3	Effects of (+)-(R)-Bay K 8644	74
3.3	Effects of Motilides	75

3.3.1	Effects of Motilin and Erythromycin	76
3.3.2	Effects of Motilides and Ryanodine	80
3.3.3	Effects of Motilides, a Non-Selective Ca^{2+} Channel Blocker and Thapsigargin	80
3.4	Effects of Benzodiazepines	82
3.4.1	Effects of Benzodiazepines Alone	84
3.4.2	Reverse of the Effects of Benzodiazepines	89
3.5	Remarks	92
4	Physicochemical Basis of Synaptic Transmission	100
4.1	Introduction	100
4.2	Cholinergic Neurotransmission	101
4.2.1	Biological Background	101
4.2.2	Mathematical Model	103
4.2.3	Numerical Algorithm	108
4.2.4	Physiological Neurotransmission	110
4.2.5	Remarks	112
4.3	Inhibition of Cholinergic Neurotransmission	113
4.3.1	Introduction	113
4.3.2	Biological Background	113
4.3.3	Mathematical Model	114
4.3.4	Effect of Chloride Salts of Divalent Cations	117
4.3.5	Effect of β -Bungarotoxin	117
4.3.6	Effect of Botulinum Toxin	118
4.3.7	Change in the Concentration of Extracellular Ca^{2+}	118
4.3.8	Effect of Cholinergic Antagonists	119
4.4	Facilitation of Cholinergic Neurotransmission	120
4.4.1	Biological Background	120
4.4.2	Mathematical Model	121
4.4.3	Effect of Cholinergic Agonists	123
4.4.4	Effect of TTX	124
4.4.5	Effect of Repetitive Stimulation	124
4.4.6	Remarks	125
4.5	Adrenergic Neurotransmission	128
4.5.1	Biological Background	128
4.5.2	Mathematical Model	129

4.5.3	Physiological Adrenergic Transmission	135
4.5.4	Remarks	137
4.6	Altered Adrenergic Neurotransmission	138
4.6.1	Effects of Extracellular Ca^{2+} Removal and Application of TTX	138
4.6.2	Inhibition of Neuronal Uptake-1 Mechanism	138
4.6.3	Inhibition of Catechol-O-Methyltransferase	140
4.6.4	Mathematical Model	140
4.6.5	Effect of α_1 -Adrenoceptor Antagonists	145
4.6.6	Mathematical Model	145
4.6.7	Effect of the Repetitive Stimulation	149
4.6.8	Remarks	150
5	Neuronal Assemblies	151
5.1	Planar Neuronal Network	151
5.1.1	Introduction	151
5.1.2	Biological Background	152
5.2	Inhibitory Neural Circuit	153
5.2.1	Axo-Axonal Interaction	153
5.2.2	Effect of COMT Inhibitors	155
5.2.3	Effect of α_1 -Adrenoceptor Blockers	156
5.3	A Model of the Sensory Pathway	156
5.3.1	Introduction	156
5.3.2	Biological Background	157
5.3.3	Mathematical Model	159
5.3.4	Responses to Deformation	163
5.3.5	Effect of Iberiotoxin and CHTX	166
5.3.6	Effect of ω -CgTX	168
5.3.7	Effect of TTX	169
5.3.8	Effect of Purinoceptor Agonists	169
5.3.9	Effect of Protein Kinase C Activator	170
5.3.10	Effect of DPDPE	172
5.3.11	Remarks	172
5.4	Enteral Sympathetic Communication	175
5.4.1	Introduction	175
5.4.2	Mathematical Model	176

5.4.3	Effect of a Single Deformation	178
5.4.4	Effect of a Periodic Deformation	183
5.4.5	Effect of Intermittent Deformation	186
5.4.6	Remarks	188
5.5	A Planar Neuronal Network	192
5.5.1	Effect of Cholinergic and Adrenergic Agonists and Antagonists	195
5.5.2	Effect of Cholinesterase Inhibitors	195
5.5.3	Effect of Cholinergic Antagonists	195
5.5.4	Remarks	196
6	Multiple Neurotransmission	199
6.1	Co-transmission by Acetylcholine and Serotonin	199
6.1.1	Introduction	199
6.1.2	Biological Background	200
6.1.3	Mathematical Model	201
6.1.4	Electrical Activity of Mechanoreceptors	207
6.1.4.1	Physiological Response	207
6.1.4.2	Effect of 5-HT ₃ Receptors	208
6.1.4.3	Effect of 5-HT ₃ -Receptor Antagonists	208
6.1.5	Electrical Activity of the Primary Neuron	209
6.1.5.1	Stimulation of Mechanoreceptors	209
6.1.5.2	Effect of 5-HT ₃ Receptors	209
6.1.5.3	Effect of 5-HT ₃ -Receptor Antagonists	212
6.1.5.4	Effect of 5-HT ₄ Receptors	212
6.1.5.5	Effect of Co-activation of 5-HT ₃ and 5-HT ₄ Receptors	212
6.1.5.6	Effect of Cisapride	213
6.1.6	Electrical Activity of the Motor Neuron	214
6.1.6.1	Effect of nACh Receptors	214
6.1.6.2	Effect of 5-HT ₃ and 5-HT ₄ Receptors	215
6.1.6.3	Effect of Co-activation of 5-HT ₃ and nACh Receptors	215
6.1.6.4	Effect of Co-activation of 5-HT ₄ and nACh Receptors	215

6.1.6.5	Effect of 5-HT ₃ /5-HT ₄ -Receptor Agonists and Co-activation of nACh Receptors	218
6.1.6.6	Effects of 5-HT ₃ -Receptor Antagonist and Co-activation of nACh Receptors	219
6.1.7	Electrical Activity of Smooth Muscle	219
6.1.7.1	Effect of μ ACh Receptors	219
6.1.7.2	Effect of 5-HT ₄ Receptors	220
6.1.7.3	Effect of Co-activation of 5-HT ₄ and μ ACh Receptors	220
6.1.7.4	Effect of 5-HT ₄ Receptor Antagonists and Co-activation of 5-HT ₃ and μ ACh Receptors	220
6.1.8	Remarks	221
6.2	Co-transmission by ACh and Excitatory Amino Acids	223
6.2.1	Biological Background	223
6.2.2	Electrical Activity of the Primary Neuron	225
6.2.2.1	Effect of Mechanical Stimulation	225
6.2.2.2	Effect of AMPA Receptors	227
6.2.2.3	Effect of NMDA Receptors	227
6.2.2.4	Effect of Co-activation of NMDA and AMPA Receptors	228
6.2.3	Electrical Activity of the Motor Neuron	230
6.2.3.1	Effect of nACh Receptors	230
6.2.3.2	Effect of NMDA Receptors	231
6.2.3.3	Effect of Co-activation of nACh and NMDA Receptors	231
6.2.3.4	Effect of Co-activation of nACh and AMPA Receptors	231
6.2.3.5	Effect of Co-activation of AMPA, NMDA and nACh Receptors	232
6.2.4	Smooth Muscle — Neuronal Chain Preparation	232
6.2.4.1	Effect of nACh Receptors	232
6.2.4.2	Effect of Co-activation of AMPA and nACh Receptors	233

6.2.4.3	Effect of Co-activation of nACh, AMPA and NMDA Receptors	233
6.2.5	Remarks	233
6.3	Co-transmission by ACh and Substance P	235
6.3.1	Introduction	235
6.3.2	Biological Background	236
6.3.3	Mathematical Model	237
6.3.4	Effect of Randomly Applied High Frequency Stimuli	239
6.3.5	Effect of Low Frequency Stimulation	242
6.3.6	Remarks	242
7	Functional Unit	244
7.1	Introduction	244
7.2	Biological Background	245
7.3	Mathematical Model	247
7.4	Numerical Algorithm	259
7.5	Electromechanical Wave Phenomenon	261
7.6	Effect of <i>Lidocaine</i> N-ethyl Bromide Quarternary Salt QX-314	268
7.7	Effect of Changes in Extracellular Ca^{2+}	268
7.8	Effect of Cholinergic Antagonists	269
7.9	Remarks	269
8	Dynamics of Intestinal Propulsion	273
8.1	Model Formulation	274
8.2	Numerical Algorithm	276
8.3	Pendular Movements	277
8.4	Segmental Contractions	280
8.5	Peristaltic Reflex	282
8.6	Effect of Multiple Neurotransmission and Drugs on Pellet Propulsion	287
8.6.1	Introduction	287
8.6.2	Effect of Co-Activation of 5-HT ₃ , nACh and μ ACh Receptors	287

8.6.3	Effects of <i>Alosetron</i>	291
8.6.4	Effects of Selective 5-HT ₄ Receptor Agonists	292
8.6.5	Effects of Selective 5-HT ₄ Receptor Antagonists	292
8.6.6	Effect of <i>Cisapride</i>	294
8.7	Remarks	294
	References	296
	Index	313
