

Contents

Preface	vii
About the Author	xvii
Brief Contents	xix
Part I: Basic Economic and Business Analysis	1
1. The Excel Worksheets	3
1.1 General Worksheet Properties	4
1.2 The Four Corners of the Worksheet	8
1.2.1 Upper left corner and the formula bar	8
1.2.2 Upper right corner	12
1.2.3 Lower right corner	13
1.2.4 Lower left corner	14
1.3 The Structure of Ribbons	15
1.3.1 A summary of ribbon and group names	15
1.3.2 The “Home” tab	15
1.3.3 The mini toolbar	20
1.4 Drawing Toolbar	21
1.4.1 Use of arrows	21
1.4.2 The text box	22
1.4.3 WordArt	24
1.5 Printer Basics	26
1.5.1 The contents of <“Office”> <Print> and <Print Preview>	26
1.5.2 Print area and Print Titles	26
1.6 Summary	28
Appendix 1A. Customize Quick Access Toolbar	28
Key terms: Economics and Business	28
Key terms: Excel	28
Homework Chapter 1	30

2. Total Revenue, Total Cost, and Profits — Excel Tables	33
2.1 Generating Random Numbers	33
2.1.1 Entering and editing formulas	34
2.1.2 Construction of a table	35
2.2 Entering Equations in a Table	38
2.2.1 The profit table	39
2.2.2 Cell formulas of the table	40
2.2.3 A simple chart	41
2.2.4 Economic interpretation	41
2.3 Some Notes on Copy, Move, and Paste Commands	42
2.3.1 Moving and copying a range	42
2.3.2 Moving and copying a worksheet	43
2.3.3 Column and row operations	44
2.4 Summary	45
Appendix 2A. Macro Program for Adding and Deleting Entire Columns and Rows	45
Appendix 2B. Consecutive Months — Custom AutoFill Lists	47
Appendix 2C. The Symbol (c) and the Copyright Logo	47
Review of Basic Equations and Formulas	48
Key terms: Economics and Business	48
Key terms: Excel	48
Homework Chapter 2	49
3. Static Analysis in Economics and Business — Excel Graphics	57
3.1 Single Market Models	58
3.2 The Nature of Static Analysis	59
3.3 The Graphic Method of Solution — The Market Model	60
3.3.1 The mathematical and Marshallian conventions	60
3.3.2 The intercept method	61
3.3.3 Slope of a line	63
3.4 A Quick Introduction to Excel Graphics	64
3.4.1 Drawing of the demand curve	64
3.4.2 Drawing of the supply curve	66
3.4.3 The equilibrium point	67
3.5 The Algebraic Method of Solution	68
3.6 Excess Demand and Stability of the Equilibrium Price	69
3.7 On Excel Graphics — The Schedule Method	70
3.7.1 Construction of the table	70
3.7.2 Graphing procedure	71
3.7.3 Definitions of some graph elements	74
3.7.4 Editing a graph	74

3.8	A National Income Model	80
3.8.1	A national income model	80
3.8.2	Graphic illustration of the macroeconomic model	83
3.8.3	Another method of illustration	85
3.9	Saving–Investment Analysis — Prelude to Comparative Static Analysis	86
3.9.1	The data table	86
3.10	Summary	87
	Appendix 3A. Excel Menu for Chart Tools	88
	Appendix 3B. Reconnecting Table and Chart	88
	Review of Basic Equations and Formulas	89
	Key terms: Economics and Business	89
	Key terms: Excel	90
	Homework Chapter 3	91
4.	Comparative Static Analysis — Name that Range!	98
4.1	Parametric Market Models	99
4.1.1	Parametric expression of equilibrium values	99
4.1.2	The discrete method of comparative static analysis	102
4.2	Name that Range!	107
4.2.1	The name box method and the menu method	107
4.2.2	Editing and deleting range names	109
4.3	The Table for Comparative Static Analysis of a Market Model	110
4.3.1	The parameter table	111
4.3.2	The data table	112
4.3.3	Conditional formatting	113
4.3.4	The chart	114
4.3.5	Copying a chart	117
4.4	Method of Graphing Comparative Static Changes	118
4.5	Comparative Static Analysis of A National Income Model	122
4.5.1	A national income model	122
4.5.2	The parameter table	123
4.5.3	The data table	124
4.5.4	Drawing the charts	125
4.5.5	Performing comparative static analysis	126
4.6	Summary	129
	Review of Basic Equations and Formulas	130
	Key terms: Economics	131
	Key terms: Excel	131
	Homework Chapter 4	132

Part II: Basic Statistics	143
5. Some Useful Statistic Functions — Equations and Formulas	145
5.1 Basic Definitions and Tools	146
5.1.1 Rules of summation	147
5.1.2 Some important inequalities	148
5.2 Basic Descriptive Statistics	149
5.2.1 The mean	149
5.2.2 The population variance	154
5.2.3 The population standard deviation	156
5.2.4 The variance	158
5.2.5 The standard deviation	159
5.2.6 The coefficient of variation	159
5.3 Measurements of Relations	160
5.3.1 Covariance	160
5.3.2 Correlation coefficient	163
5.4 Some Other Statistical Measurements	165
5.4.1 Growth rates	165
5.4.2 Elasticity	167
5.5 The Computation Table	168
5.5.1 Calculation using definitions	170
5.5.2 Calculation using Excel equations	171
5.5.3 Calculation of growth rates and elasticities	172
5.6 Simple Least Squares Regression — The Graphic Method	172
5.6.1 The scatter diagram of consumption and income	173
5.6.2 Fitting a linear regression line	175
5.7 Summary	177
Review of Basic Equations and Formulas	179
Key terms: Economics and Business	180
Key terms: Excel	180
Homework Chapter 5	181
6. Random Numbers and Frequency Distributions — Organizing a Large Data Base	186
6.1 Random Variables	187
6.1.1 Discrete and continuous random variables	187
6.2 Definitions of Probability	188
6.2.1 The classical theory of probability	188
6.2.2 The frequency theory of probability	188
6.2.3 Subjective probability	189
6.2.4 Axiomatic theory of probability	189

6.3	The Continuous Uniform Distribution	192
6.3.1	The probability density function	192
6.3.2	The continuous standard uniform distribution	192
6.3.3	Transformations of random numbers	193
6.4	Tossing a Fair Die	194
6.4.1	Transformation of a continuous random variable to discrete random variable	195
6.4.2	Finite sample correction	196
6.4.3	The Excel command for a discrete random variable	197
6.5	Constructing a Sample of Size 1000	197
6.5.1	The table	197
6.5.2	Counting the frequencies — The range copy command (RCC)	198
6.5.3	Relative frequency, relative and absolute references	201
6.5.4	The cumulative relative frequency	203
6.5.5	Showing the cell formula embedded in the cell or range of cells	204
6.5.6	The probability distribution	205
6.5.7	Diagrammatic illustration of distributions	205
6.6	The Mean and Variance of the Sample and Population	207
6.6.1	The mean and variance of grouped data	207
6.6.2	The mean and variance of the population	209
6.6.3	Comparison of sample and population characteristics	210
6.7	The Normal Distribution	211
6.7.1	The normal probability density function (pdf)	211
6.7.2	The standard normal distribution in Excel	211
6.7.3	The general normal distribution	213
6.7.4	Illustrations	214
6.8	The Normally Distributed Random Variable	214
6.8.1	The inverse function method	214
6.8.2	Derivation of frequency, relative and cumulative relative frequencies	215
6.8.3	Mean and standard deviation of the normal distribution	217
6.9	Summary	217
	Appendix 6A. Probability Density Function for a Continuous Random Variable	219
	Appendix 6B. Combination Charts and Trendlines	219
	Appendix 6C. Disabling Excel’s Time/Date Default	222
	Appendix 6D. The Class Boundaries of a Continuous Variable	222
	Appendix 6E. Showing a Group of Cell Formulas Embedded in the Table	223
	Review of Other Basic Equations and Formulas	224
	Key terms: Economics and Business	224

Key terms: Excel	225
Homework Chapter 6	226
7. Regression Analysis — Excel Commands	235
7.1 Introduction to the Least Squares Regression	235
7.2 The Method of Least Squares	236
7.2.1 The error term	239
7.2.2 The normal equations	239
7.2.3 The calculation table	240
7.3 Simple Least Squares Regression Functions in Excel	241
7.3.1 Excel functions	242
7.3.2 An application	242
7.3.3 The coefficient of determination — A measure of goodness of fit	245
7.3.4 Calculation of the coefficient of determination	247
7.4 Standard Errors of Least Squares Coefficients	249
7.4.1 Definitions and formulas of standard errors	249
7.4.2 Calculation of standard errors	251
7.5 The t-Distribution and Hypothesis Testing of Regression Coefficients	252
7.5.1 The t-statistic	253
7.5.2 The t-distribution	254
7.5.3 Hypothesis testing of population regression coefficients	254
7.5.4 The general format for writing a regression equation	256
7.6 The F-Distribution and Hypothesis Testing of Goodness of Fit	257
7.6.1 The F-statistic	257
7.6.2 The F-distribution	257
7.6.3 Hypothesis testing of the goodness of fit	258
7.7 The P-Value Approach	259
7.8 Multiple Regression Analysis	260
7.8.1 An example	260
7.8.2 The t-statistic and the F-statistic using the p-value approach	261
7.9 Summary	262
Appendix 7A. The Add-In Regression Package	265
Appendix 7B. Proof of the Decomposition of the Total Variation	266
Review of Equations and Functions	268
Key terms: Economics, Business, and Statistics	269
Key terms: Excel	270
Homework Chapter 7	270

Part III: Private and Public Decision Making 277

8. Future Value Problems — Exponential and Logarithmic Functions 279

8.1 Basic Definitions and Examples 280

8.2 Multiple Conversions per Period 284

8.2.1 Interest is convertible semi-annually 286

8.2.2 Interest is convertible quarterly 286

8.2.3 Interest is convertible daily 286

8.2.4 Interest is convertible every minute 287

8.2.5 A summary table of interest converting m times within a year 287

8.2.6 Compounding for t years 288

8.3 Continuous Compounding within a Period 290

8.3.1 A basic proposition on e 290

8.3.2 Illustration of e 291

8.4 The Exponential Growth Equation and its Applications 292

8.5 Natural Exponential and Logarithmic Functions 295

8.5.1 Some definitions and relations 295

8.5.2 Rules of exponents 299

8.5.3 Rules of logarithms 300

8.6 Summary 303

Appendix 8A. Drawing Charts: Fig. 8.4 and Fig. 8.7 303

Appendix 8B. Three Forms of the Future Value Problem 305

Review of Equations and Functions 307

Key terms: Economics and Business 307

Key terms: Excel 308

Homework Chapter 8 308

9. Present Value Problems — Making Financial Decisions 313

9.1 Present Value Problems 313

9.1.1 The discrete case 313

9.1.2 The continuous case 315

9.1.3 Present value interest factor (PVIF) 316

9.1.4 A Sensitivity table for future and present values 316

9.2 Future Value Problems with Annuity 318

9.2.1 Some definitions and an illustration 318

9.2.2 The future value interest factor with annuity (FVIFA) 320

9.3 Present Value with Annuity Problems 320

9.3.1 Some definitions and an illustration 320

9.3.2 Present value interest factor with annuity (PVIFA) 321

9.3.3 The ordinary annuity with unequal annuity 322

9.3.4 Comparison of present and future values with annuity 322

9.4	Excel Function for Financial Analysis	323
9.4.1	Future value problems using Excel	323
9.4.2	Present value problems using Excel	326
9.5	The Amortization Table	329
9.5.1	Some definitions and illustrations	329
9.5.2	The amortization table using Excel equations	330
9.5.3	Other related financial functions in Excel	334
9.6	Summary	336
	Appendix 9A. Derivation of FVIFA and PVIFA	337
	Review of Basic Equations and Formulas	338
	Key terms: Economics and Business	338
	Key terms: Excel	339
	Homework Chapter 9	339
10.	Economic Policy Analysis — Vectors and Matrices	343
10.1	Vectors	344
10.1.1	Why vectors and matrices?	344
10.1.2	Vector operations	347
10.1.3	Scalar product	348
10.1.4	Application to price indexes	350
10.2	Matrices	352
10.2.1	Definitions	353
10.2.2	Matrix operations	353
10.2.3	Matrix multiplication (the row–column multiplication)	355
10.2.4	Excel function for matrix multiplication	357
10.2.5	A system of parametric equations	359
10.3	Transpose and Inverse Matrices	360
10.3.1	The transpose of a matrix	361
10.3.2	The inverse of a matrix	361
10.4	Solving a System of Simultaneous Linear Equations	362
10.5	Macroeconomic Policy Models	365
10.5.1	The model and the markets	366
10.5.2	The policy instruments and the policy impact matrix	366
10.5.3	Policy implications	368
10.6	Input–Output Models	369
10.6.1	The input-coefficient matrix and basic assumptions	370
10.6.2	The structure of the economy	371
10.6.3	Solving input–output models	373
10.6.4	Implementation on Excel spreadsheets	374
10.6.5	The basic problem of input–output models	375
10.6.6	Manpower planning	376

10.7 Summary	377
Review of Basic Equations and Functions	378
Key terms: Economics and Business	379
Key terms: Excel	380
Homework Chapter 10	380
Part IV: Optimization	391
11. Production and Utility Functions — 3D Graphics	393
11.1 The Cobb–Douglas Production Function	394
11.1.1 An overview of production functions	394
11.1.2 The Cobb–Douglas production function	394
11.1.3 Creating an output sensitivity table	396
11.1.4 The partial productivity curves	396
11.1.5 The total productivity surface	399
11.1.6 Isoquant maps	400
11.1.7 The derivation of isoquants by solving production functions	402
11.2 Average and Marginal Productivities of a Factor	403
11.2.1 Average productivities	404
11.2.2 Marginal productivities	405
11.2.3 The law of diminishing marginal rate of technical substitution in production	406
11.2.4 Marginal productivity and perfect competition	408
11.2.5 The relations among the three productivity curves	410
11.3 The CES Production Function	411
11.3.1 The elasticity of substitution	411
11.3.2 Properties of a CES production function	412
11.3.3 The shape of the CES production surface	416
11.3.4 The fixed-coefficient production function	417
11.4 Applications to Utility Functions	418
11.5 Profit Maximization and Saddle Points in 3D	420
11.5.1 Profit maximization: One-variable case	420
11.5.2 Profit maximization: Two-variable case	421
11.5.3 The nature of an optimal point	424
11.5.4 Saddle points and other surfaces	425
11.6 Summary	426
Appendix 11A. Four Methods of Setting up a Sensitivity Table	427
Appendix 11B. Returns to Scale and Shape of the Production Function	427
Review of Basic Equations and Formulas	430
Key terms: Economics and Business	430
Key terms: Excel	432
Homework Chapter 11	432

12. Constrained Optimization in the Theories of Production and Consumption — Using Excel Solver	441
12.1 The Theory of Production	442
12.1.1 The cost constraint	442
12.1.2 The production surface and the cost constraint	444
12.1.3 The nature of optimization	447
12.1.4 Factor demand functions	448
12.2 Using Excel Solver in Constrained Optimization	449
12.2.1 Installing the Solver	450
12.2.2 Solver procedure	450
12.2.3 Summary of the Solver procedures	452
12.3 Cost Minimization — the Duality	452
12.3.1 Sensitivity table	453
12.3.2 The nonlinear constraint	454
12.3.3 Graphic methods of solution	455
12.3.4 The Solver solution	456
12.4 Simultaneous Presentation of an Objective Function and a Constraint	456
12.5 Utility Maximization and Comparative Static Analysis	458
12.5.1 Utility maximization	458
12.5.2 The Excel Solver	459
12.5.3 The sensitivity table and graphics	461
12.5.4 The law of diminishing marginal rate of substitution	463
12.5.5 The law of equal marginal utility per dollar	465
12.5.6 Derivation of demand functions	466
12.6 Decomposition of the Price Change	467
12.6.1 The indifference map	467
12.6.2 Substitution and income effects	468
12.6.3 Another illustration	469
12.6.4 Compensating variation of income	471
12.7 Summary: Circular Flow of the Economy	473
Review of Basic Equations and Formulas	476
Key terms: Economics and Business	476
Key terms: Excel	477
Homework Chapter 12	477

Part V: Research Methods and Presentation **487**

13. Research Methods — Excel Data Analysis	489
13.1 Some Basic Definitions	489
13.1.1 List and Database	489

13.1.2	Labels and values	490
13.2	The IF Function	491
13.2.1	Examples of the IF function	491
13.2.2	Nested IF functions	492
13.2.3	Logical IF functions	492
13.2.4	Generating a large set of data	493
13.3	Excel Tables	495
13.3.1	Constructing an Excel Table	495
13.3.2	Changing a list to an Excel Table and vice versa	496
13.3.3	Copying and moving within the Excel Table	497
13.3.4	Hiding rows	497
13.3.5	Methods of data analysis	497
13.4	Sorting	498
13.4.1	Single column sorting	498
13.4.2	Multicolumn sorting	499
13.5	Filtering	500
13.5.1	Simple filtering	500
13.5.2	The total row	501
13.5.3	Advanced filtering	504
13.6	Subtotaling a list	507
13.6.1	Adding a subtotal	507
13.6.2	Outline	508
13.7	PivotTables	510
13.7.1	Constructing a PivotTable	510
13.7.2	PivotTable reports	511
13.7.3	PivotTable operations	513
13.7.4	More PivotTable features	515
13.7.5	PivotCharts	517
13.8	Examples of Using Excel Data Analysis	518
13.8.1	Examples of sorting and filtering	518
13.8.2	Examples of using PivotTable	520
13.8.3	Relations among sorting, filtering, and PivotTable	523
13.9	Summary	525
	Key terms: Excel	525
	Homework Chapter 13	526
14.	Research Presentation — Sharing Excel Tables and Charts	533
14.1	The Fields in Economics	533
14.2	Creation of an Excel Flowchart	534
14.3	Sharing Excel Data with MS Word	536
14.3.1	Paste Excel table from clipboard	536

14.3.2	Using the paste special command	540
14.3.3	Pasting the chart as a picture format	541
14.4	Sharing Excel Data with MS PowerPoint	541
14.4.1	Making slides	541
14.4.2	Slide view and presentation	544
14.4.3	Slide management	545
14.4.4	Printing the slides	546
14.5	The Text Import Wizard	547
14.5.1	Using the text import wizard	547
14.5.2	Some useful websites	550
14.6	Summary	553
	Key terms: Economics and Business	554
	Key terms: Excel, Word, and PowerPoint	555
	Homework Chapter 14	555

Part VI: Dynamics and Comparative Dynamics **563**

15.	An Introduction to Dynamic Analysis — Linked Cells	565
15.1	Introduction	566
15.1.1	Difference equations	566
15.1.2	Backward difference operator	567
15.2	The First-Order Difference Equation	569
15.2.1	An example: Simple interest	569
15.2.2	The future value problem without annuity	572
15.2.3	The future value problem with annuity	572
15.3	The Standard Method of Solving Difference Equations	575
15.3.1	Definition of solutions	575
15.3.2	The standard method of deriving the general solution	575
15.4	Equilibrium and Stability	579
15.4.1	The dynamic path of the complementary solution	580
15.4.2	The effects of the value of A	581
15.5	A Dynamic Market Model	582
15.5.1	The solutions	582
15.5.2	The stability condition	582
15.6	An Excel Solution Table of First-Order Difference Equations	583
15.6.1	A numerical example	583
15.6.2	Standard form and its solutions	583
15.6.3	Using the Excel table to solve the dynamic market model	583
15.6.4	Programming the definite solution	584

15.7 The Phase Diagram and the Time Paths — The Cobweb Model	587
15.8 Applications to Theory of Economic Growth	592
15.8.1 Harrod’s growth model	592
15.8.2 The neoclassical model of economic growth	594
15.9 The Balanced Growth Path and the Golden Rule	597
15.9.1 The Golden Rule of accumulation	599
15.10 Summary	601
Review of Basic Equations and Formulas	602
Key terms: Economics and Business	603
Key terms: Mathematics	603
Homework Chapter 15	604
Postscript — Microsoft Excel 2007 and Excel 2010	609
References	619
Index	621
