Preface	vii
Acknowledgments	xi
1. Introduction	1
1.1 An outline of the book	1
1.2 The target audience of the book	2
1.3 A second “Genesis”	2
1.4 Three stepping-stones towards the intelligibility of nature	3
1.5 Recommendations to the reader	4
2. An Integrated Study of Western Civilization	5
2.1 The three branches of culture	5
2.2 The growth of monotheism	6
2.3 The emergence of science and philosophy	7
2.4 Faith and reason	10
2.5 The Enlightenment	11
2.6 The unity of nature	13
2.7 The evolution of culture	14
2.8 Is the position of humans special in the tree of life?	16
2.9 What is needed to duplicate our intelligence?	16
2.10 Constraints imposed by theology on our view of life	17
2.11 Questions in philosophy, science and theology	18
2.12 The anthropic approach and the emergence of life	20
2.13 Is there evidence of purpose in evolution?	21
3. From a First to a Second Genesis	25
3.1 The fitness of the environment	25
3.2 Life appeared spontaneously in the remote past	26
3.3 Philosophical issues related to life in the universe	27
3.4 The question of design in biology	28
3.5 Towards a general interest in the origin of life	29
3.6 Cultural implications of life in the cosmos	30
4. Implications of a Second Genesis	31
4.1 Convergence of the evolutionary process	31

4.2	Is biology sufficient to discuss a second Genesis?	33
4.3	Is fine-tuning related to a second Genesis?	34
4.4	Reflections by theologians	35
4.5	Naturalism in philosophy	37
4.6	Non-foundational premises of Christian belief	39
5.	The Destiny of the Universe	41
5.1	The concept of convergence in the life sciences	41
5.2	Intelligibility of the cosmos according to Aristotle	43
5.3	Intelligibility of the cosmos according to Ptolemy	45
5.4	Intelligibility of the cosmos in the Middle Ages	45
5.5	The Copernican revolution, Digges and Bruno	47
5.6	Cosmogonical and cosmological models	49
5.7	The cosmic microwave background	50
5.8	From the composition of the universe to eventual insights into its destiny	52
6.	The Destiny of Life in the Universe	55
6.1	Cosmic pathways towards a second Genesis	55
6.2	Astrochemistry	56
6.3	The origin and evolution of the Solar System	58
6.4	From chemical to cellular evolution	59
6.5	The terrestrial tree of life	59
6.6	The evolution of life in the universe	61
6.7	Pathways towards intelligence in the cosmos	62
7.	Towards the Intelligibility of Nature	65
7.1	Convergence in the synthesis of the elements	65
7.2	Convergence in the delivery of the biomolecules	66
7.3	Convergence in the formation of interstellar gas	66
7.4	The evolution of the Sun and the origin of life	67
7.5	Convergence in the direct records of solar evolution	68
7.6	Isotopic fractionation of noble gases on Earth	69
7.7	The solar wind after the Genesis mission	69
7.8	Space climate and the early earth	71
7.9	Extra solar radiation during the evolution of life	72
7.10	The search for life in the Solar System	73
8.	Towards the Intelligibility of Life	75
8.1	The universal driving force of evolution	75
8.2	General aspects of convergence in biology	76

8.3	Convergence at the biochemical level	76
8.4	The birth of chemical evolution	77
8.5	The universality of the life sciences	78
8.6	Convergence at the level of animals	79
9.	Is Life Ubiquitous in the Universe?	81
9.1	Introduction	81
9.2	Is intelligence a universal phenomenon?	82
9.3	Is cellular evolution bound to take place?	84
9.4	Where can we search for a second Genesis?	85
9.5	Habitability in the Solar System	86
9.6	Implications of life in the cosmos in the humanities	87
9.7	Ultimate implications of evolution in the cosmos	88
10.	Testing the Universality of Biology	89
10.1	Contingency and convergence in evolution	89
10.2	Evolutionary history tends to repeat itself	90
10.3	The ubiquity of convergent evolution	92
10.4	The Solar System is not unique	93
10.5	Can the universality of biology be tested?	95
10.6	Searching for biosignatures in the Solar System	97
10.7	A case for the search for a second Genesis in the Saturn system	98
11.	The Emergence of Intelligence in the Universe	101
11.1	On the inevitability of biological evolution	101
11.2	Evolution should be convergent in the cosmos	102
11.3	Natural selection and convergent evolution	103
11.4	Constraints on convergent evolution	104
12.	Intelligibility in the Dialogue Between Science and Religion	107
12.1	The dialogue between science and religion	107
12.2	Is there a second Genesis in our Solar System?	109
12.3	The possibility of the emergence of life on Europa	111
12.4	Future missions to Europa	111
12.5	On the implications of Darwinism	112
12.6	Darwinism, philosophy and theology	113
12.7	On the progress of the different areas of culture	114
13.	The Ultimate Frontier of Science and the Humanities	117
13.1	A fruitful dialogue between science and religion	117

13.2	Frontiers of the humanities	118
13.3	Questions from the philosophical area of ethics	119
13.4	Views on science and religion	120
13.5	Further insights into our origins	120
13.6	Darwinism within natural theology	122
13.7	Beyond the natural boundaries of science	123
13.8	Some questions may escape the scope of science	124
14.	Can Nature be Intelligible	127
14.1	Intelligibility of nature: a cultural problem	127
14.2	What is the likely destiny of life?	130
14.3	The destiny of life and a second Genesis	132
14.4	Further thoughts on the universality of science	132
14.5	A dialogue across the frontiers of science and the humanities	134
	Bibliography	137
	Abbreviations	165
	Glossary and Short Biographies	169
	Supplementary Reading	207
	Index	219
	The Author	229
