Contents

Preface ix

1. Prelude 1

2. The Scientific Method 3
   - 2.1 Edwin Smith papyrus 3
   - 2.2 Greek philosophy (4^{th} century BC) 4
   - 2.3 Islamic philosophy (8^{th} century AD–15^{th} century AD) 6
   - 2.4 European Science (12^{th} century AD–16^{th} century AD) 7
   - 2.5 Scientific Revolution (1543 AD–18^{th} century AD) 9
   - 2.6 Humanism and Empiricism 13
   - 2.7 The Scientific Method 15
   - 2.8 Application of the Scientific Method to Everyday Problem 16

3. Observation 17
   - 3.1 External information 21

3.1.1 Missed information 21
3.1.2 Misinformation 22
3.1.3 Hidden information 27
3.1.4 No information 32
3.1.5 Unaware information 35
3.1.6 Evidence-based information 37
3.2 Internal information 37
3.2.1 Self-denied information 38
3.2.2 Biased information 39
3.2.3 Unexploited information 40
3.2.4 Peripheral information 42

4. Hypothesis 45
4.1 Abduction 55
4.2 Wild conjectures 57
4.3 Albert Einstein 61

5. Experiment 65
5.1 Experiment versus hypothesis 79
5.2 Platonic, Aristotelian, Baconian, and Galilean methodology 81

6. Recognition 83
6.1 John Nash 92

7. Problem Situation and Problem Definition 97
7.1 Perspectives on different levels 97
7.2 Perspectives on the same level 98

8. Induction and Deduction 107
8.1 Induction 107
8.2 Deduction 110

9. Alternative Solutions 119
9.1 Lotion bottle with a pump dispenser 137

10. Relation 139
10.1 Creativity 149
10.1.1 Ordinary thinking 150
10.1.2 Creative thinking 151
10.1.2.1 Knowledge 151
10.1.2.2 Insight 152
10.1.2.3 Unconscious mind 153
10.1.3 Double helix 154
10.1.3.1 Genetic material 154
10.1.3.2 Watson and Crick at Cavendish Laboratory, Cambridge 155
10.1.3.3 Rosalind Franklin at King's College, London 158
10.1.3.4 The triple helix model 159
10.1.3.5 The double helix model 161
10.1.4 Creative thinking and Ordinary thinking 164
10.2 Scientific Research and Scientific Method 165
10.3 Can we be more creative? 166

11. Mathematics 169

12. Probable Value 195

13. Epilogue 209

Bibliography 213
