

# Contents

<i>Preface</i>	vii
1. The hubris of classical physics	1
1.1 Explaining nature: Apples and the moon . . . . .	1
1.2 More laws of classical physics . . . . .	9
1.3 Laws of physics in moving cars . . . . .	16
1.4 Heat as a form of motion . . . . .	19
1.5 Entropy: A new beast . . . . .	25
1.6 A peep ahead: Where did it go wrong? . . . . .	32
2. And then there was Einstein	37
2.1 Something crazy about light . . . . .	37
2.2 Time and its flow . . . . .	39
2.3 Relativity in action . . . . .	43
2.4 Principle of equivalence . . . . .	48
2.5 Gravity and light: More amazing consequences . . . . .	56
2.6 Gravity and the universe . . . . .	61
2.7 The odd man out . . . . .	67
3. Madness of the micro-world	69
3.1 Waves . . . . .	69
3.2 Electron: Wave or particle? . . . . .	73
3.3 Things are quantized! . . . . .	80
3.4 Spin and the social behaviour of particles . . . . .	87
3.5 Interaction of matter and radiation . . . . .	91
3.6 The atomic nuclei . . . . .	95

- 3.7 Quantum states of cats and other conceptual issues . . . . 104
- 4. Particles, particles everywhere 111
  - 4.1 Adding relativity to quantum theory . . . . . 111
  - 4.2 The particle zoo . . . . . 120
    - 4.2.1 Leptons and quarks . . . . . 121
  - 4.3 Quantum electrodynamics: A prototype model . . . . . 127
  - 4.4 Weak and strong interactions . . . . . 133
  - 4.5 The secret life of the vacuum . . . . . 138
- 5. Cosmos and the quantum 143
  - 5.1 Structure of the universe . . . . . 143
  - 5.2 Thermal history of the universe . . . . . 146
  - 5.3 Very early universe . . . . . 152
  - 5.4 Inflation . . . . . 155
  - 5.5 Dark matter . . . . . 158
  - 5.6 Structure formation . . . . . 160
  - 5.7 Ripples in radiation . . . . . 162
  - 5.8 Dark energy . . . . . 164
- 6. Matters of gravity 171
  - 6.1 This peculiar thing called gravity . . . . . 171
  - 6.2 Particles from the vacuum . . . . . 178
  - 6.3 Horizon, entropy and temperature . . . . . 188
  - 6.4 Gravity as an emergent phenomenon . . . . . 197
  - 6.5 Black holes, singularity and the information . . . . . 200
- 7. In the beginning ... 205
  - 7.1 But, how did it all begin? . . . . . 205
    - 7.1.1 Chemical elements . . . . . 205
    - 7.1.2 Galaxies and stars . . . . . 206
  - 7.2 The origin of initial perturbation . . . . . 209
  - 7.3 Quantum cosmology . . . . . 211
  - 7.4 Cosmogenesis . . . . . 214
- Index* 217
